(54) Title: TRICYCLIC ANTITUMOR COMPOUNDS BEING FARNESYL PROTEIN TRANSFERASE INHIBITORS

(57) Abstract: The present invention discloses novel tricyclic com-  
pounds represented by the formula (1.0), a prodrug thereof, or a  
pharmaceutically acceptable salt or solvate of the compound or of  
said prodrug useful for inhibiting farnesyl protein transferase. Also  
disclosed are pharmaceutical compositions comprising such com-  
pounds their preparation as well as methods of using them to treat  
proliferative diseases such as cancer.

## TRICYCLIC ANTITUMOR COMPOUNDS BEING FARNESYL PROTEIN TRANSFERASE INHIBITORS

SUMMARY OF THE INVENTION

10

This invention provides compounds useful for the inhibition of farnesyl protein transferase (FPT). The compounds of this invention are represented by the formula:

(1.0)

or a pharmaceutically acceptable salt or solvate thereof, wherein:

15

one of a, b, c and d represents N or N<sup>+</sup>O<sup>-</sup>, and the remaining a, b, c, and d groups represent carbon, wherein each carbon has an R<sup>1</sup> or R<sup>2</sup> group bound to said carbon; or

each of a, b, c, and d is carbon, wherein each carbon has an R<sup>1</sup> or R<sup>2</sup> group bound to said carbon;

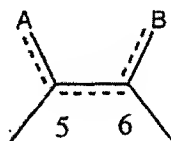

the dotted line (---) represents optional bonds;

- 5 X represents N or CH when the optional bond (to C11) is absent, and  
represents C when the optional bond (to C11) is present;

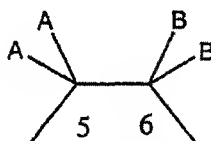

When the optional bond is present between carbon atom 5 (i.e., C-5) and carbon atom 6 (i.e., C-6) (i.e., there is a double bond between C-5 and C-6) then there is only one A substituent bound to C-5 and there is only one B substituent bound to C-6 and A or B is other than H;

- 10 When the optional bond is not present between carbon atom 5 and carbon atom 6 (i.e., there is a single bond between C-5 and C-6) then there are two A substituents bound to C-5, wherein each A substituent is independently selected and two B substituents bound to C-6, wherein each B substituent is independently selected, i.e.,

15

In formula 1.0 represents

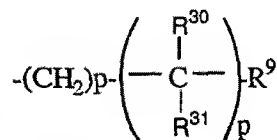

- when there is a single bond between C-5 and C-6 and each A and each B are  
20 independently selected, and wherein at least one of the two A substituents or one of the two B substituents are H, and wherein at least one of the two A substituents or one of the two B substituents is other than H, (i.e., when there is a single bond between C-5 and C-6 one of the four substituents (A, A, B, and B) is H and one is other than H);

- 25 A and B is independently selected from:

- (1) -H;
- (2) -R<sup>9</sup>;
- (3) -R<sup>9</sup>-C(O)-R<sup>9</sup>;
- (4) -R<sup>9</sup>-CO<sub>2</sub>-R<sup>9a</sup>;

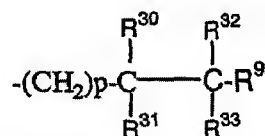

- (5)  $-(CH_2)_p R^{26}$ ;
- (6)  $-C(O)N(R^9)_2$ , wherein each  $R^9$  is the same or different;
- (7)  $-C(O)NHR^9$ ;
- (8)  $-C(O)NH-CH_2-C(O)-NH_2$ ;
- 5 (9)  $-C(O)NHR^{26}$ ;
- (10)  $-(CH_2)_p C(R^9)-O-R^{9a}$ ;
- (11)  $-(CH_2)_p (R^9)_2$ , wherein each  $R^9$  is the same or different;
- (12)  $-(CH_2)_p C(O)R^9$ ;
- (13)  $-(CH_2)_p C(O)R^{27a}$ ;
- 10 (14)  $-(CH_2)_p C(O)N(R^9)_2$ , wherein each  $R^9$  is the same or different;
- (15)  $-(CH_2)_p C(O)NH(R^9)$ ;
- (16)  $-(CH_2)_p C(O)N(R^{26})_2$ , wherein each  $R^{26}$  is the same or different;
- (17)  $-(CH_2)_p N(R^9)-R^{9a}$ , (e.g.  $-CH_2-N(CH_2\text{-pyridine})-CH_2\text{-imidazole}$ );
- (18)  $-(CH_2)_p N(R^{26})_2$ , wherein  $R^{26}$  is the same or different (e.g.,
- 15  $-(CH_2)_p\text{-NH-CH}_2\text{-CH}_3$ );
- (19)  $-(CH_2)_p NHC(O)R^{50}$ ;
- (20)  $-(CH_2)_p NHC(O)_2 R^{50}$ ;
- (21)  $-(CH_2)_p N(C(O)R^{27a})_2$  wherein each  $R^{27a}$  is the same or different;
- (22)  $-(CH_2)_p NR^{51}C(O)R^{27}$ , or  $R^{51}$  and  $R^{27}$  taken together with the atoms to
- 20 which they are bound form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;
- (23)  $-(CH_2)_p NR^{51}C(O)NR^{27}$ , or  $R^{51}$  and  $R^{27}$  taken together with the atoms to which they are bound form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;
- 25 (24)  $-(CH_2)_p NR^{51}C(O)N(R^{27a})_2$ , wherein each  $R^{27a}$  is the same or different;
- (25)  $-(CH_2)_p NHSO_2N(R^{51})_2$ , wherein each  $R^{51}$  is the same or different;
- (26)  $-(CH_2)_p NHCO_2 R^{50}$ ;
- (27)  $-(CH_2)_p NC(O)NHR^{51}$ ;
- (28)  $-(CH_2)_p CO_2 R^{51}$ ;
- 30 (29)  $-NHR^9$ ;
- (30)

wherein  $\text{R}^{30}$  and  $\text{R}^{31}$  are the

same or different;

(31)

5

, wherein  $\text{R}^{30}$ ,  $\text{R}^{31}$ ,  $\text{R}^{32}$  and  $\text{R}^{33}$  are the

same or different;

(32) -alkenyl- $\text{CO}_2\text{R}^{9a}$ ;

(33) -alkenyl- $\text{C}(\text{O})\text{R}^{9a}$ ;

(34) -alkenyl- $\text{CO}_2\text{R}^{51}$ ;

10

(35) -alkenyl- $\text{C}(\text{O})-\text{R}^{27a}$ ;

(36)  $(\text{CH}_2)_p$ -alkenyl- $\text{CO}_2-\text{R}^{51}$ ;

(37)  $-(\text{CH}_2)_p\text{C}=\text{NOR}^{51}$  or

(38)  $-(\text{CH}_2)_p$ -Phthalimid;

p is 0, 1, 2, 3 or 4;

15

each  $\text{R}^1$  and  $\text{R}^2$  is independently selected from H, Halo,  $-\text{CF}_3$ ,

$-\text{OR}^{10}$ ,  $\text{COR}^{10}$ ,  $-\text{SR}^{10}$ ,  $-\text{S}(\text{O})_t\text{R}^{15}$  wherein t is 0, 1 or 2,  $-\text{N}(\text{R}^{10})_2$ ,  $-\text{NO}_2$ ,  $-\text{OC}(\text{O})\text{R}^{10}$ ,

$\text{CO}_2\text{R}^{10}$ ,  $-\text{OCO}_2\text{R}^{15}$ ,  $-\text{CN}$ ,  $-\text{NR}^{10}\text{COOR}^{15}$ ,  $-\text{SR}^{15}\text{C}(\text{O})\text{OR}^{15}$ ,  $-\text{SR}^{15}\text{N}(\text{R}^{13})_2$  provided that

$\text{R}^{15}$  in  $-\text{SR}^{15}\text{N}(\text{R}^{13})_2$  is not  $-\text{CH}_2$  and wherein each  $\text{R}^{13}$  is independently selected from

H or  $-\text{C}(\text{O})\text{OR}^{15}$ , benzotriazol-1-yloxy, tetrazol-5-ylthio, or substituted tetrazol-5-ylthio,

20

alkynyl, alkenyl or alkyl, said alkyl or alkenyl group optionally being substituted with

halogen,  $-\text{OR}^{10}$  or  $-\text{CO}_2\text{R}^{10}$ ;

$\text{R}^3$  and  $\text{R}^4$  are the same or different and each independently represent H, and any of the substituents of  $\text{R}^1$  and  $\text{R}^2$ ;

$\text{R}^5$ ,  $\text{R}^6$ ,  $\text{R}^7$  and  $\text{R}^{7a}$  each independently represent H,  $-\text{CF}_3$ ,

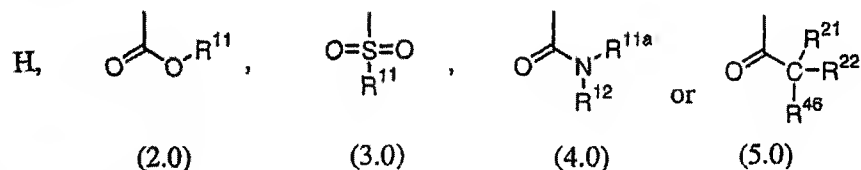

25

$-\text{COR}^{10}$ , alkyl or aryl, said alkyl or aryl optionally being substituted with

$-\text{OR}^{10}$ ,  $-\text{SR}^{10}$ ,  $-\text{S}(\text{O})_t\text{R}^{15}$ ,  $-\text{NR}^{10}\text{COOR}^{15}$ ,  $-\text{N}(\text{R}^{10})_2$ ,  $-\text{NO}_2$ ,  $-\text{C}(\text{O})\text{R}^{10}$ ,

$-\text{OCOR}^{10}$ ,  $-\text{OCO}_2\text{R}^{15}$ ,  $-\text{CO}_2\text{R}^{10}$ ,  $\text{OPO}_3\text{R}^{10}$ , or  $\text{R}^5$  is combined with  $\text{R}^6$  to represent  $=\text{O}$  or  $=\text{S}$ ;

$\text{R}^8$  is selected from:

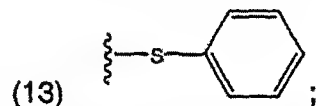

5  $\text{R}^9$  is selected from:

- (1) heteroaryl;
- (2) substituted heteroaryl;
- (3) arylalkoxy;
- (4) substituted arylalkoxy;
- 10 (5) heterocycloalkyl;
- (6) substituted heterocycloalkyl;
- (7) heterocycloalkylalkyl;
- (8) substituted heterocycloalkylalkyl;
- (9) heteroarylalkyl;
- 15 (10) substituted heteroarylalkyl;
- (11) heteroarylalkenyl;
- (12) substituted heteroarylalkenyl;
- (13) heteroarylalkynyl and
- (14) substituted heteroarylalkynyl;

20 wherein said substituted  $\text{R}^9$  groups are substituted with one or more (e.g. 1, 2 or 3) substituents selected from:

- (1)  $-\text{OH}$ ;
- (2)  $-\text{CO}_2\text{R}^{14}$ ;
- (3)  $-\text{CH}_2\text{OR}^{14}$ ;
- 25 (4) halogen (e.g. Br, Cl or F),
- (5) alkyl (e.g. methyl, ethyl, propyl, butyl or t-butyl);
- (6) amino;
- (7) trityl;
- (8) heterocycloalkyl;
- 30 (9) cycloalkyl, (e.g. cyclopropyl or cyclohexyl);

- (10) arylalkyl;
- (11) heteroaryl;
- (12) heteroarylalkyl and

5 wherein  $R^{14}$  is independently selected from: H; alkyl; aryl, arylalkyl, heteroaryl and heteroarylalkyl;

$R^{9a}$  is selected from: alkyl or arylalkyl;

$R^{10}$  is selected from: H; alkyl; aryl or arylalkyl;

$R^{11}$  is selected from:

- 10 (1) alkyl;
- (2) substituted alkyl;
- (3) aryl;
- (4) substituted aryl;
- (5) cycloalkyl;
- 15 (6) substituted cycloalkyl;
- (7) heteroaryl;
- (8) substituted heteroaryl;
- (9) heterocycloalkyl; and
- (10) substituted heterocycloalkyl;

20 wherein said substituted  $R^{11}$  groups have one or more (e.g. 1, 2 or 3) substituents selected from:

- (1) -OH;
- (2) halogen (e.g. Br, Cl or F) and
- (3) alkyl;

25  $R^{11a}$  is selected from:

- (1) H;
- (2) OH;
- (3) alkyl;
- (4) substituted alkyl;
- 30 (5) aryl;
- (6) substituted aryl;
- (7) cycloalkyl;

- (8) substituted cycloalkyl;
- (9) heteroaryl;
- (10) substituted heteroaryl;
- (11) heterocycloalkyl; and
- (12) substituted heterocycloalkyl;

wherein said substituted  $R^{11a}$  groups have one or more (e.g. 1, 2 or 3) substituents selected from:

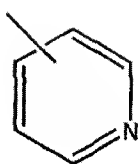

- (1) -OH;
- (2) -CN;
- (3) -CF<sub>3</sub>;
- (4) halogen (e.g. Br, Cl or F);
- (5) alkyl;
- (6) cycloalkyl;
- (7) heterocycloalkyl;
- (8) arylalkyl;
- (9) heteroarylalkyl;
- (10) alkenyl and
- (11) heteroalkenyl;

$R^{12}$  is selected from: H, or alkyl;

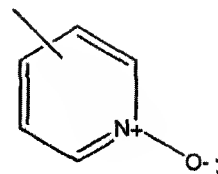

$R^{15}$  is selected from: alkyl or aryl;

$R^{21}$ ,  $R^{22}$  and  $R^{46}$  are independently selected from:

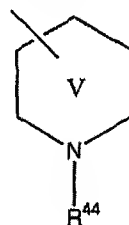

- (1) -H;
- (2) alkyl (e.g., methyl, ethyl, propyl, butyl or t-butyl);
- (3) aryl, (e.g. phenyl);
- (4) substituted aryl,  
optionally substituted with one or more substituents selected  
from: alkyl, halogen, CF<sub>3</sub> or OH;
- (5) cycloalkyl, (e.g. cyclohexyl);
- (6) substituted cycloalkyl;  
optionally substituted with one or more substituents selected from:  
alkyl, halogen, CF<sub>3</sub> or OH;
- (7) heteroaryl of the formula,

and

(8) heterocycloalkyl of the formula:

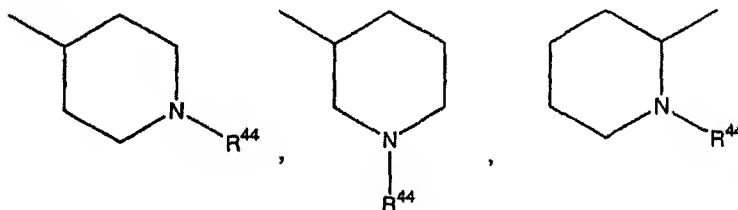

5

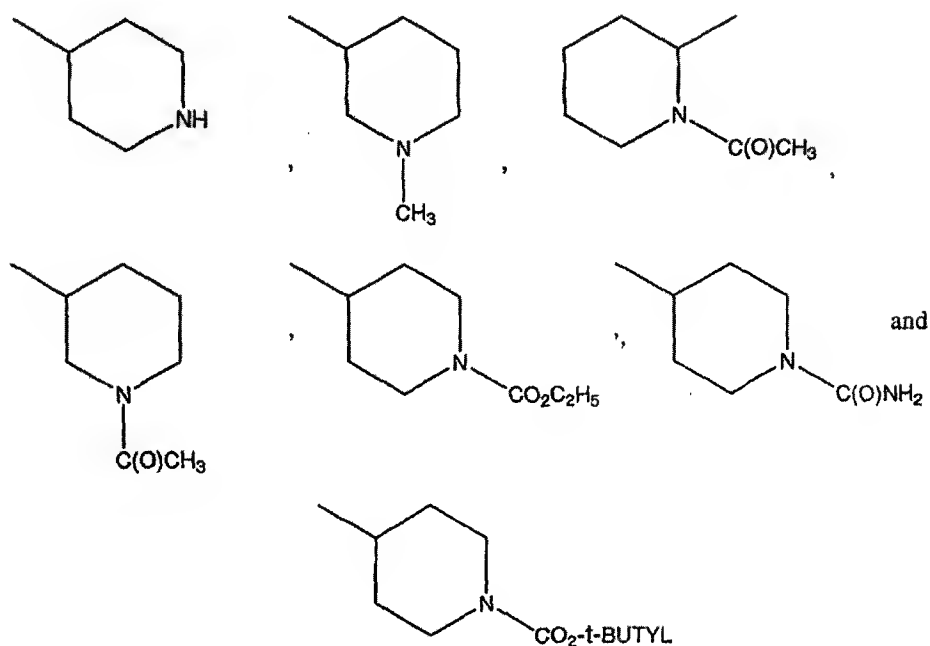

wherein  $R^{44}$  is selected from:

- (1) -H,
- (2) alkyl, (e.g., methyl, ethyl, propyl, butyl or t-butyl);
- (3) alkylcarbonyl (e.g.,  $\text{CH}_3\text{C}(\text{O})-$ );
- (4) alkyloxy carbonyl (e.g.,  $-\text{C}(\text{O})\text{O}-t\text{-C}_4\text{H}_9$ ,  $-\text{C}(\text{O})\text{OC}_2\text{H}_5$ , and  $-\text{C}(\text{O})\text{OCH}_3$ );
- (5) haloalkyl (e.g., trifluoromethyl) and
- (6)  $-\text{C}(\text{O})\text{NH}(\text{R}^{51})$ ;

15 when  $\text{R}^{21}$ ,  $\text{R}^{22}$  or  $\text{R}^{46}$  is the heterocycloalkyl of the formula above (i.e. Ring V), Ring V includes:

Examples of Ring V include:

5

$R^{26}$  is selected from:

- (1) -H;
- (2) alkyl (e.g. methyl, ethyl, propyl, butyl or t-butyl);
- (3) alkoxy (e.g. methoxy, ethoxy, propoxy);
- (4)  $-\text{CH}_2\text{-CN}$ ;
- (5)  $R^9$ ;
- (6)  $-\text{CH}_2\text{CO}_2\text{H}$ ;
- (7)  $-\text{C(O)alkyl}$  and
- (8)  $\text{CH}_2\text{CO}_2\text{alkyl}$ ;

10

15

$R^{27}$  is selected from:

- (1) -H;
- (2) -OH;
- (3) alkyl (e.g. methyl, ethyl, propyl, or butyl), and

(4) alkoxy ;

$R^{27a}$  is selected from:

(1) alkyl (e.g. methyl, ethyl, propyl, or butyl), and

(2) alkoxy ;

5  $R^{30}$ ,  $R^{31}$ ,  $R^{32}$  and  $R^{33}$  is independently selected from:

(1) -H;

(2) -OH;

(3) =O;

(4) alkyl;

10 (5) aryl (e.g. phenyl) and

(6) arylalkyl (e.g. benzyl);

$R^{50}$  is selected from:

(1) alkyl;

(2) heteroaryl;

15 (3) substituted heteroaryl and

(4) amino;

wherein said substituents on said substituted  $R^{50}$  groups are independently selected from: alkyl (e.g. methyl, ethyl, propyl, or butyl); halogen (e.g. Br, Cl, or F); and -OH;

20  $R^{50a}$  is selected from:

(1) heteroaryl;

(2) substituted heteroaryl and

(3) amino;

$R^{51}$  is selected from: -H, or alkyl (e.g.;methyl, ethyl, propyl, butyl or t-butyl);

25

The compounds of this invention: (i) potently inhibit farnesyl protein transferase, but not geranylgeranyl protein transferase I, in vitro; (ii) block the phenotypic change induced by a form of transforming Ras which is a farnesyl acceptor but not by a form of transforming Ras engineered to be a geranylgeranyl acceptor; (iii) block intracellular processing of Ras which is a farnesyl acceptor but not of Ras engineered to be a geranylgeranyl acceptor; and (iv) block abnormal cell growth in culture induced by transforming Ras.

30

The compounds of this invention inhibit farnesyl protein transferase and the farnesylation of the oncogene protein Ras. Thus, this invention further provides a method of inhibiting farnesyl protein transferase, (e.g., ras farnesyl protein transferase) in mammals, especially humans, by the administration of an effective amount (e.g. a therapeutically effective amount) of the tricyclic compounds described above. The administration of the compounds of this invention to patients, to inhibit farnesyl protein transferase, is useful in the treatment of the cancers described below.

This invention provides a method for inhibiting or treating the abnormal growth of cells, including transformed cells, by administering an effective amount (e.g. a therapeutically effective amount) of a compound of this invention. Abnormal growth of cells refers to cell growth independent of normal regulatory mechanisms (e.g., loss of contact inhibition). This includes the abnormal growth of: (1) tumor cells (tumors) expressing an activated Ras oncogene; (2) tumor cells in which the Ras protein is activated as a result of oncogenic mutation in another gene; and (3) benign and malignant cells of other proliferative diseases in which aberrant Ras activation occurs.

This invention also provides a method for inhibiting or treating tumor growth by administering an effective amount (e.g., a therapeutically effective amount) of the tricyclic compounds, described herein, to a mammal (e.g., a human) in need of such treatment. In particular, this invention provides a method for inhibiting or treating the growth of tumors expressing an activated Ras oncogene by the administration of an effective amount (e.g. a therapeutically effective amount) of the above described compounds.

The present invention also provides a method of treating proliferative diseases, especially cancers (tumors), comprising administering an effective amount (e.g., a therapeutically effective amount) of a compound of the invention, described herein, to a mammal (e.g., a human) in need of such treatment in combination with (2) an effective amount of at least one anti-cancer agent i.e. a chemotherapeutic agent and/or radiation).

The present invention also provides a method of treating proliferative diseases, especially cancers (tumors), comprising administering an effective amount (e.g., a therapeutically effective amount) of a compound of the invention, described herein, to a mammal (e.g., a human) in need of such treatment in combination with (2) an effective amount of at least one signal transduction inhibitor.

Examples of proliferative diseases (tumors) which may be inhibited or treated include, but are not limited to, lung cancer (e.g., lung adenocarcinoma), pancreatic cancers (e.g., pancreatic carcinoma such as, for example, exocrine pancreatic carcinoma), colon cancers (e.g., colorectal carcinomas, such as, for example, colon adenocarcinoma and colon adenoma), myeloid leukemias (for example, acute myelogenous leukemia (AML)), thyroid follicular cancer, myelodysplastic syndrome (MDS), bladder carcinoma, epidermal carcinoma, melanoma, breast cancer and prostate cancer.

It is believed that this invention also provides a method for inhibiting or treating proliferative diseases, both benign and malignant, wherein Ras proteins are aberrantly activated as a result of oncogenic mutation in other genes--i.e., the Ras gene itself is not activated by mutation to an oncogenic form--with said inhibition or treatment being accomplished by the administration of an effective amount (e.g. a therapeutically effective amount) of the tricyclic compounds described herein, to a mammal (e.g., a human) in need of such treatment. For example, the benign proliferative disorder neurofibromatosis, or tumors in which Ras is activated due to mutation or overexpression of tyrosine kinase oncogenes (e.g., neu, src, abl, lck, and fyn), may be inhibited or treated by the tricyclic compounds described herein.

The tricyclic compounds useful in the methods of this invention inhibit or treat the abnormal growth of cells. Without wishing to be bound by theory, it is believed that these compounds may function through the inhibition of G-protein function, such as Ras p21, by blocking G-protein isoprenylation, thus making them useful in the treatment of proliferative diseases such as tumor growth and cancer. Without wishing to be bound by theory, it is believed that these compounds inhibit ras farnesyl protein transferase, and thus show antiproliferative activity against ras transformed cells.

#### DETAILED DESCRIPTION OF THE INVENTION

As used herein, the following terms are used as defined below unless otherwise indicated:

MH<sup>+</sup>-represents the molecular ion plus hydrogen of the molecule in the mass spectrum;

BOC-represents tert-butyloxycarbonyl;

CBZ-represents -C(O)OCH<sub>2</sub>C<sub>6</sub>H<sub>5</sub> (i.e., benzyloxycarbonyl);

- CH<sub>2</sub>Cl<sub>2</sub>-represents dichloromethane;  
CIMS-represents chemical ionization mass spectrum;  
DBU-represents 1,8-Diazabicyclo[5.4.0]undec-7-ene;  
DEAD-represents diethylazodicarboxylate;  
5 DEC-represents EDCI which represents 1-(3-dimethyl-aminopropyl)-3-ethylcarbodiimide hydrochloride;  
DMF-represents N,N-dimethylformamide;  
Et-represents ethyl;  
EtOAc-represents ethyl acetate;  
10 EtOH-represents ethanol;  
HOBT-represents 1-hydroxybenzotriazole hydrate;  
IPA-represents isopropanol;  
i-PrOH-represents isopropanol;  
Me-represents methyl;  
15 MeOH-represents methanol;  
MS-represents mass spectroscopy;  
FAB-represents FABMS which represents fast atom bombardment mass spectroscopy;  
HRMS-represents high resolution mass spectroscopy;  
20 NMM-represents N-methylmorpholine;  
PPh<sub>3</sub>-represents triphenyl phosphine;  
Ph-represents phenyl;  
Pr-represents propyl;  
SEM-represents 2,2-(Trimethylsilyl)ethoxymethyl;  
25 TBDMS-represents tert-butyldimethylsilyl;  
Et<sub>3</sub>N-represents TEA which represents triethylamine;  
t-BUTYL-represents -C-(CH<sub>3</sub>)<sub>3</sub>;  
TFA-represents trifluoroacetic acid;  
THF-represents tetrahydrofuran;  
30 Tr-represents trityl;  
Tf-represents SO<sub>2</sub>CF<sub>3</sub>;  
at least one- represents one or more-(e.g. 1-6 ), more preferably 1-4 with 1, 2 or 3 being most preferred;

alkyl-represents straight and branched carbon chains and contains from one to twenty carbon atoms, preferably one to six carbon atoms, more preferably one to four carbon atoms; even more preferably one to two carbon atoms.

arylalkyl-represents an alkyl group, as defined above, substituted with an aryl group, as defined below, such that the bond from another substituent is to the alkyl moiety;

alkoxy-represents an alkyl moiety, alkyl as defined above, covalently bonded to an adjacent structural element through an oxygen atom, for example, methoxy, ethoxy, propoxy, butoxy and the like;

phenoxy represents an alkoxy moiety, as defined above, wherein the covalently bonded moiety is an aryl group, as defined below, for example, -O-phenyl;

alkenyl represents straight and branched carbon chains having at least one carbon to carbon double bond and containing from 2-12 carbon atoms, preferably from 2 to 6 carbon atoms and most preferably from 3 to 6 carbon atoms;

alkynyl represents straight and branched carbon chains having at least one carbon to carbon triple bond and containing from 2-12 carbon atoms, preferably from 2 to 6 carbon atoms and most preferably from 2 to 4 carbon atoms;

amino represents an -NH<sub>2</sub> moiety;

aryl-(including the aryl portion of arylalkyl and heteroarylalkyl)-represents a carbocyclic group containing from 6 to 15 carbon atoms and having at least one aromatic ring (e.g., aryl is a phenyl ring), with all available substitutable carbon atoms of the carbocyclic group being intended as possible points of attachment, said carbocyclic group being optionally substituted with one or more (e.g., 1 to 3) of halo, alkyl, hydroxy, alkoxy, phenoxy, CF<sub>3</sub>, -C(O)N(R<sup>18</sup>)<sub>2</sub>, -SO<sub>2</sub>R<sup>18</sup>, -SO<sub>2</sub>N(R<sup>18</sup>)<sub>2</sub>, amino, alkylamino, dialkylamino, -COOR<sup>23</sup> or -NO<sub>2</sub>, wherein R<sup>18</sup> represents H, alkyl, aryl, arylalkyl, heteroaryl or cycloalkyl and R<sup>23</sup> represents alkyl or aryl;

cycloalkyl-represents saturated carbocyclic rings of from 3 to 20 carbon atoms, preferably 3 to 7 carbon atoms, said cycloalkyl ring being optionally substituted with one or more (e.g., 1, 2 or 3) of the same or different alkyl groups (e.g., methyl or ethyl);

cycloalkylalkyl- represents an alkyl group, as defined above, substituted with a cyclo group, as defined above, such that the bond from another substituent is to the alkyl moiety;

heterocycloalkylalkyl- represents an alkyl group, as defined above, substituted with a heterocycloalkyl group, as defined below, such that the bond from another substituent is to the alkyl moiety;

halo- represents halogen i.e. fluoro, chloro, bromo and iodo;

5 haloalkyl- represents an alkyl group, as defined above, substituted with a halo group, as defined above, such that the bond from another substituent is to the alkyl moiety;

heteroarylalkyl- represents an alkyl group, as defined above, substituted with a heteroaryl group, as defined below, such that the bond from another substituent is to the alkyl moiety;

heteroarylalkenyl- represents an alkenyl group, as defined above, substituted with a heteroaryl group, as defined below, such that the bond from another substituent is to the alkyl moiety;

heteroalkyl- represents straight and branched carbon chains containing from one to twenty carbon atoms, preferably one to six carbon atoms interrupted by 1 to 3 heteroatoms selected from -O-, -S- and -N-;

heteroalkenyl- represents straight and branched carbon chains having at least one carbon to carbon double bond and containing from one to twenty carbon atoms, preferably one to six carbon atoms interrupted by 1 to 3 heteroatoms selected from -O-, -S- and -N-;

heteroalkynyl- represents straight and branched carbon chains having at least one carbon to carbon triple bond and containing from one to twenty carbon atoms, preferably one to six carbon atoms interrupted by 1 to 3 heteroatoms selected from -O-, -S- and -N-;

25 arylheteroalkyl- represents a heteroalkyl group, as defined above, substituted with an aryl group, as defined above, such that the bond from another substituent is to the alkyl moiety;

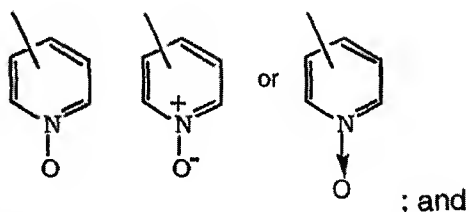

alkylcarbonyl- represents an alkyl group, as defined above, covalently bonded to a carbonyl moiety (-CO-), for example, -COCH<sub>3</sub>;

30 alkyloxycarbonyl- represents an alkyl group, as defined above, covalently bonded to a carbonyl moiety (-CO-) through an oxygen atom, for example, -C(O)-OC<sub>2</sub>H<sub>5</sub>;

heteroaryl- represents cyclic groups, optionally substituted with  $R^3$  and  $R^4$ , having at least one heteroatom selected from O, S or N, said heteroatom interrupting a carbocyclic ring structure and having a sufficient number of delocalized pi electrons to provide aromatic character, with the aromatic heterocyclic groups preferably

5 containing from 2 to 14 carbon atoms, e.g., 2- or 3-furyl, 2- or 3-thienyl, 2-, 4- or 5-thiazolyl, 2-, 4- or 5-imidazolyl, 2-, 4- or 5-pyrimidinyl, 2-pyrazinyl, 3- or 4-pyridazinyl, 3-, 5- or 6-[1,2,4-triazinyl], 3- or 5-[1,2,4-thiadizolyl], 2-, 3-, 4-, 5-, 6- or 7-benzofuranyl, 2-, 3-, 4-, 5-, 6- or 7-indolyl, 3-, 4- or 5-pyrazolyl, 2-, 4- or 5-oxazolyl, triazolyl, 2-, 3- or 4-pyridyl, or 2-, 3- or 4-pyridyl N-oxide, wherein pyridyl N-oxide can be represented

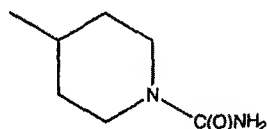

10 as:

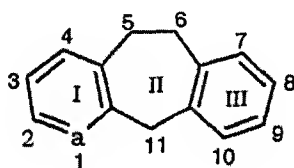

heterocycloalkyl- represents a saturated, branched or unbranched carbocyclic ring containing from 3 to 15 carbon atoms, preferably from 4 to 6 carbon atoms, which carbocyclic ring is interrupted by 1 to 3 hetero groups selected from -O-, -S- or -NR<sup>24</sup>, (e.g., -NC(O)-NH<sub>2</sub>) wherein R<sup>24</sup> represents alkyl, aryl, -C(O)N(R<sup>18</sup>)<sub>2</sub> wherein R<sup>18</sup> is as

15 above defined, suitable heterocycloalkyl groups include 2- or 3-tetrahydrofuranyl, 2- or 3-tetrahydrothienyl, 2-, 3- or 4-piperidiny, 2- or 3-pyrrolidinyl, 1-, 2-, 3-, or 4-piperiziny, 2- or 4-dioxanyl, morpholiny, and

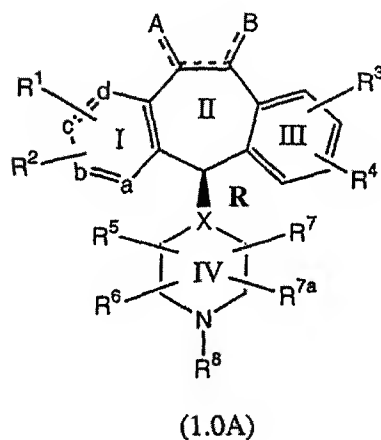

20

The positions in the tricyclic ring system are:

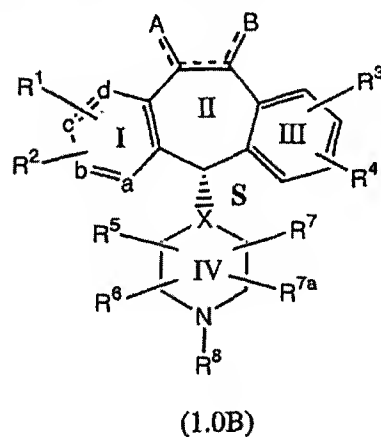

The compounds of formula 1.0 include the preferred R isomer:

X= N or CH  
a =N or C

5

wherein the optional bond between C-5 and C-6 is present, and B is H, or the optional bond between C-5 and C-6 is absent and each B is H; and the preferred S isomer:

X= N or CH  
a =N or C

10

wherein the optional bond between C-5 and C-6 is present and A is H, or the optional bond between C-5 and C-6 is absent and each A is H.

Preferably, R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup>, and R<sup>4</sup> are independently selected from H or halo, more preferably H, Br, F or Cl, and even more preferably H, or Cl. Representative compounds of formula 1.0 include dihalo (e.g., 3,8-dihalo) and monohalo (e.g., 8-halo)

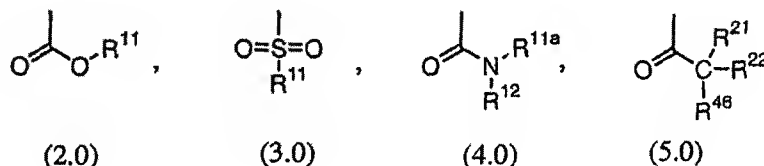

15

substituted compounds, such as, for example: (3-bromo, 8-chloro), (3,8-dichloro), (3-bromo) and (3-chloro).

Substituent a is preferably C or N with N being most preferred.

Preferably,  $R^8$  is selected from:

5

More preferably  $R^8$  is 2.0 or 4.0; and most preferably  $R^8$  is 4.0.

Preferably,  $R^{11a}$  is selected from: alkyl, substituted alkyl, aryl, substituted aryl, heteroaryl, substituted heteroaryl, cycloalkyl or substituted cycloalkyl; wherein, said substituted aryl, heteroaryl, and cycloalkyl,  $R^{11a}$  groups are substituted with substituents independently selected from: halo (preferably F or Cl), cyano,  $-CF_3$ , or alkyl; and wherein said substituted alkyl  $R^{11a}$  groups substituted with substituents selected from halo, (preferably F or Cl), cyano or  $CF_3$ . Most preferably,  $R^{11a}$  is selected from: alkyl, aryl, substituted aryl, cycloalkyl, or substituted cycloalkyl, wherein, said substituted aryl and substituted cycloalkyl groups are substituted with substituents independently selected from: halo, (preferably F or Cl), CN or  $CF_3$ . More preferably,  $R^{11a}$  is selected from methyl, t-butyl, phenyl, cyanophenyl, chlorophenyl, fluorophenyl, or cyclohexyl. Still more preferably,  $R^{11a}$  is selected from: t-butyl, cyanophenyl, chlorophenyl, fluorophenyl or cyclohexyl. Even more preferably,  $R^{11a}$  is selected from cyanophenyl, with p-cyanophenyl being even still more preferred.

Preferably,  $R^{11}$ , is selected from alkyl, cycloalkyl, or substituted cycloalkyl, wherein said substituted cycloalkyl group is substituted with 1, 2 or 3 substituents independently selected from: halo (preferably chloro or fluoro), or alkyl, (preferably methyl or t-butyl). Examples of  $R^{11}$  groups include: methyl, ethyl, propyl, t-butyl, cyclohexyl or substituted cyclohexyl. More preferably,  $R^{11}$  is selected from methyl, t-butyl, cyclohexyl, chlorocyclohexyl, (preferably p-chlorocyclohexyl) or fluorocyclohexyl, (preferably p-fluorocyclohexyl). Most preferably,  $R^{11}$  is selected from: methyl, t-butyl, or cyclohexyl, with t-butyl or cyclohexyl being still more preferred.

Preferably,  $R^{12}$  is selected from H or methyl. Most preferably,  $R^{12}$  is H.

$R^5$ ,  $R^6$ ,  $R^7$  and  $R^{7a}$  are preferably H.

Preferably,  $R^9$  is selected from:

- (1) heteroaryl;
- 5 (2) substituted heteroaryl;
- (3) arylalkoxy;
- (4) substituted arylalkoxy;
- (5) heterocycloalkyl;
- (6) substituted heterocycloalkyl;
- 10 (7) heterocycloalkylalkyl;
- (8) substituted heterocycloalkylalkyl;
- (9) heteroarylalkyl;
- (10) substituted heteroarylalkyl;
- (11) heteroarylalkenyl and
- 15 (12) substituted heteroarylalkenyl;

wherein said substituted  $R^9$  groups are substituted with one or more substituents (e.g., 1, 2, or 3) independently selected from:

- (1) -OH;
- (2)  $-\text{CO}_2R^{14}$ ;
- 20 wherein,  $R^{14}$  is selected from: H or alkyl (e.g., methyl or ethyl), preferably alkyl, most preferably methyl or ethyl;
- (3) alkyl, substituted with one or more -OH groups (e.g., 1, 2, or 3, preferably 1), for example  $-(\text{CH}_2)_q\text{OH}$  wherein, q is 1 - 4, with q = 1 being preferred.
- 25 (4) halo (e.g., Br, F, I, or Cl);
- (5) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl (e.g. methyl, ethyl, propyl, or butyl (preferably isopropyl, or t-butyl));
- (6) amino;
- (7) trityl;
- 30 (8) heterocycloalkyl;
- (9) arylalkyl (e.g. benzyl);
- (10) heteroaryl (e.g. pyridyl) and
- (11) heteroarylalkyl (piperidine- $\text{CH}_3$ );

Most preferably,  $R^9$  is selected from:

- (1) heterocycloalkyl;
- (2) substituted heterocycloalkyl;
- 5 (3) heterocycloalkylalkyl;
- (4) substituted heterocycloalkylalkyl;
- (5) heteroarylalkyl;
- (6) substituted heteroarylalkyl;
- (7) heteroarylalkenyl and
- 10 (8) substituted heteroarylalkenyl;

wherein said substituted  $R^9$  groups are substituted with substituents independently selected from:

- 15 (1) -OH;
  - (2)  $-CO_2R^{14}$ ;
- wherein,  $R^{14}$  is selected from: H or alkyl (e.g., methyl or ethyl), preferably alkyl, and most preferably methyl or ethyl;
- (3) alkyl, substituted with one or more -OH groups
  - 20 (e.g., 1, 2, or 3, preferably 1), for example  $-(CH_2)_qOH$  wherein, q is 1 - 4, with q = 1 being preferred.
  - (4) halo (e.g., Br or Cl);
  - (5) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl
  - (e.g. methyl, ethyl, propyl, isopropyl, butyl or t-butyl, most preferably t-
  - 25 butyl);
  - (6) amino;
  - (7) trityl;
  - (8) heterocycloalkyl;
  - (9) arylalkyl;
  - 30 (10) heteroaryl and
  - (11) heteroarylalkyl;

More preferably,  $R^9$  is selected from:

- 5
- (1) heterocycloalkyl;
  - (2) substituted heterocycloalkyl;
  - (3) heterocycloalkylalkyl;
  - (4) substituted heterocycloalkylalkyl;
  - (5) heteroarylalkyl;
  - (6) substituted heteroarylalkyl;
  - (7) heteroarylalkenyl and
  - (8) substituted heteroarylalkenyl;

wherein substituents for said substituted R<sup>9</sup> groups are each independently selected  
10 from:

- (1) halo (e.g., Br, or Cl);
- (2) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl  
(e.g. methyl, ethyl, propyl, isopropyl, butyl or t-butyl, most preferably  
t-butyl);
- 15 (3) alkyl, substituted with one or more (i.e. 1, 2, or 3, preferably 1) –  
OH groups, (e.g. –(CH<sub>2</sub>)<sub>q</sub>OH wherein q is 1-4, with q=1 being preferred).
- (4) amino;
- (5) trityl;
- (6) arylalkyl, and
- 20 (7) heteroarylalkyl.

Even more preferably, R<sup>9</sup> is selected from:

- (1) heterocycloalkylalkyl;
- (2) substituted heterocycloalkylalkyl;
- (3) heteroarylalkyl and
- 25 (4) substituted heteroarylalkyl;

wherein substituents for said substituted R<sup>9</sup> groups are each independently selected  
from:

- (1) halo (e.g., Br, or Cl);
- (2) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl  
30 (e.g. methyl, ethyl, propyl, isopropyl, butyl or t-butyl, most preferably  
t-butyl);
- (3) amino and
- (4) trityl.

Still more preferably, R<sup>9</sup> is selected from:

- (1) heterocycloalkylalkyl;
- (2) substituted heterocycloalkylalkyl;
- (3) heteroarylalkyl and
- (4) substituted heteroarylalkyl;

5

wherein substituents for said substituted R<sup>9</sup> groups are each independently selected from:

- (1) halo (e.g., Br, or Cl) and
  - (2) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl
- (e.g. methyl, ethyl, propyl, isopropyl, butyl or t-butyl, most preferably t-butyl).

10

Yet even more preferably, R<sup>9</sup> is selected from:

- (1) piperidinyl;
- (2) piperiziny;
- (3) -(CH<sub>2</sub>)<sub>p</sub>-piperidinyl;
- (4) -(CH<sub>2</sub>)<sub>p</sub>-piperiziny;
- (5) -(CH<sub>2</sub>)<sub>p</sub>-morpholinyl and
- (6) -(CH<sub>2</sub>)<sub>p</sub>-imidazolyl;

15

wherein p is 0 to 1, and wherein the ring moiety of each R<sup>9</sup> group is optionally

substituted with one, two or three substituents independently selected from:

20

- (1) halo (e.g., Br, or Cl) and
  - (2) alkyl, usually C1-C6 alkyl, preferably C1-C4 alkyl
- (e.g. methyl, ethyl, propyl, isopropyl, butyl or t-butyl, most preferably t-butyl).

25

Still more preferably, R<sup>9</sup> is selected from:

- (1) -piperiziny;
- (2) -(CH<sub>2</sub>)<sub>p</sub>-piperidinyl;
- (3) -(CH<sub>2</sub>)<sub>p</sub>-imidazolyl; and
- (4) -(CH<sub>2</sub>)<sub>p</sub>-morpholinyl,

30

wherein p is 1 to 4, and the ring moiety of each R<sup>9</sup> group is optionally substituted with one, two or three substituents independently selected from: methyl, ethyl, and isopropyl.

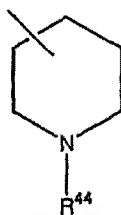

Yet even more preferably,  $R^9$  is selected from  $-(CH_2)-\text{Imidazolyl}$ , wherein said imidazolyl ring is optionally substituted with 1, 2, or 3 substituents, preferably 1, independently selected from methyl or ethyl.

Still even more preferably,  $R^9$  is selected from  $-(CH_2)-(2\text{-methyl})\text{-imidazole}$ .

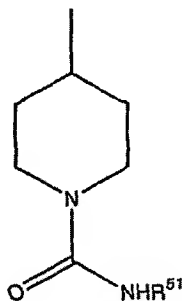

- 5 Preferably, at least one of  $R^{21}$ ,  $R^{22}$  and  $R^{46}$  is other than H or alkyl. More preferably,  $R^{21}$  and  $R^{22}$  is H and  $R^{46}$  is other than H or alkyl. Most preferably,  $R^{21}$  and  $R^{22}$  is H and  $R^{46}$  is selected from heteroaryl or heterocycloalkyl.

- 10 Preferably, said heteroaryl groups for said  $R^{21}$ ,  $R^{22}$  or  $R^{46}$  is 3-pyridyl, 4-pyridyl, 3-pyridyl-N-Oxide or 4-pyridyl- N-Oxide; more preferably 4-pyridyl or 4-pyridyl- N-Oxide; most preferably 4-pyridyl- N-Oxide.

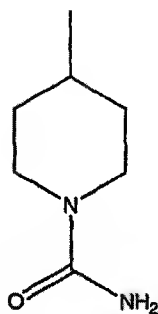

Preferably, said heterocycloalkyl groups for said  $R^{21}$ ,  $R^{22}$ , or  $R^{46}$  is piperidine Ring V:

- 15 wherein  $R^{44}$  is  $-C(O)NHR^{51}$ , and preferably  $R^{51}$  is  $-C(O)NH_2$ . More preferably, piperidine Ring V is:

and most preferred Ring V is:

Thus,  $R^{21}$ ,  $R^{22}$  and  $R^{46}$  are preferably independently selected from:

- (1) H;
- 5 (2) aryl (most preferably phenyl);
- (3) heteroaryl and
- (4) heterocycloalkyl (i.e., Piperidine Ring V)

wherein at least one of  $R^{21}$ ,  $R^{22}$ , or  $R^{46}$  is other than H, and most preferably  $R^{21}$  and  $R^{22}$  are H and  $R^{46}$  is other than H, and more preferably  $R^{21}$  and  $R^{22}$  are H and  $R^{46}$  is selected from heteroaryl or heterocycloalkyl, and still more preferably  $R^{21}$  and  $R^{22}$  are H and  $R^{46}$  is Piperidine Ring V; wherein the preferred definitions of heteroaryl and Piperidine Ring V are as described above.

Preferably, A and B are independently selected from:

- (1) -H;
- 15 (2)  $-R^9$ ;
- (3)  $-R^9-C(O)-R^9$ ;
- (4)  $-R^9-CO_2-R^{9a}$ ;
- (5)  $-C(O)NHR^9$ ;
- (6)  $-C(O)NH-CH_2-C(O)-NH_2$ ;
- 20 (7)  $-C(O)NHR^{26}$ ;
- (8)  $-(CH_2)_p(R^9)_2$ , wherein each  $R^9$  is the same or different;
- (9)  $-(CH_2)_pC(O)R^9$ ;
- (10)  $-(CH_2)_pC(O)R^{27a}$ ;
- 25 (11)  $-(CH_2)_pC(O)N(R^9)_2$ , wherein each  $R^9$  is the same or different;
- (12)  $-(CH_2)_pC(O)NH(R^9)$ ;
- (13)  $-(CH_2)_pNHC(O)R^{50}$ ;
- (14)  $-(CH_2)_pNHC(O)_2R^{50}$ ;
- (15)  $-(CH_2)_pN(C(O)R^{27a})_2$  wherein  $R^{27a}$  is the same or different;
- 30 (16)  $-(CH_2)_pNR^{51}C(O)R^{27}$ , optionally,  $R^{51}$  and  $R^{27}$ , taken together with the atoms to which they are bound, form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;

(17)  $-(CH_2)_pNR^{51}C(O)NR^{27}$ , optionally,  $R^{51}$  and  $R^{27}$ , taken together with the atoms to which they are bound, form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;

(18)  $-(CH_2)_pNR^{51}C(O)N(R^{27a})_2$ , wherein each  $R^{27a}$  is the same or different;

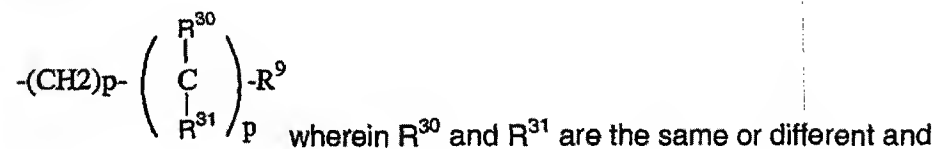

(19)  $-(CH_2)_pNH SO_2N(R^{51})_2$ , wherein each  $R^{51}$  is the same or different;

(20)  $-(CH_2)_pNH CO_2R^{50}$ ;

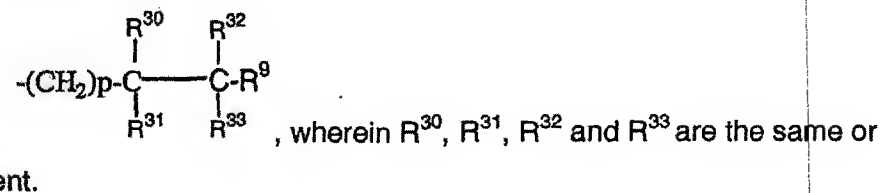

(21)  $-(CH_2)_pCO_2R^{51}$ ;

(22)  $-NHR^9$ ;

(23)

(24)

Most preferably, A and B are independently selected from:

(1)  $-H$ ;

(2)  $-R^9$ ;

(3)  $-R^9-C(O)-R^9$ ;

(4)  $-R^9-CO_2-R^{9a}$ ;

(5)  $-C(O)NHR^9$ ;

(6)  $-(CH_2)_p(R^9)_2$ , wherein each  $R^9$  is the same or different;

(7)  $-(CH_2)_pC(O)R^9$ ;

(8)  $-(CH_2)_pC(O)N(R^9)_2$ , wherein each  $R^9$  is the same or different;

(9)  $-(CH_2)_pC(O)NH(R^9)$ ;

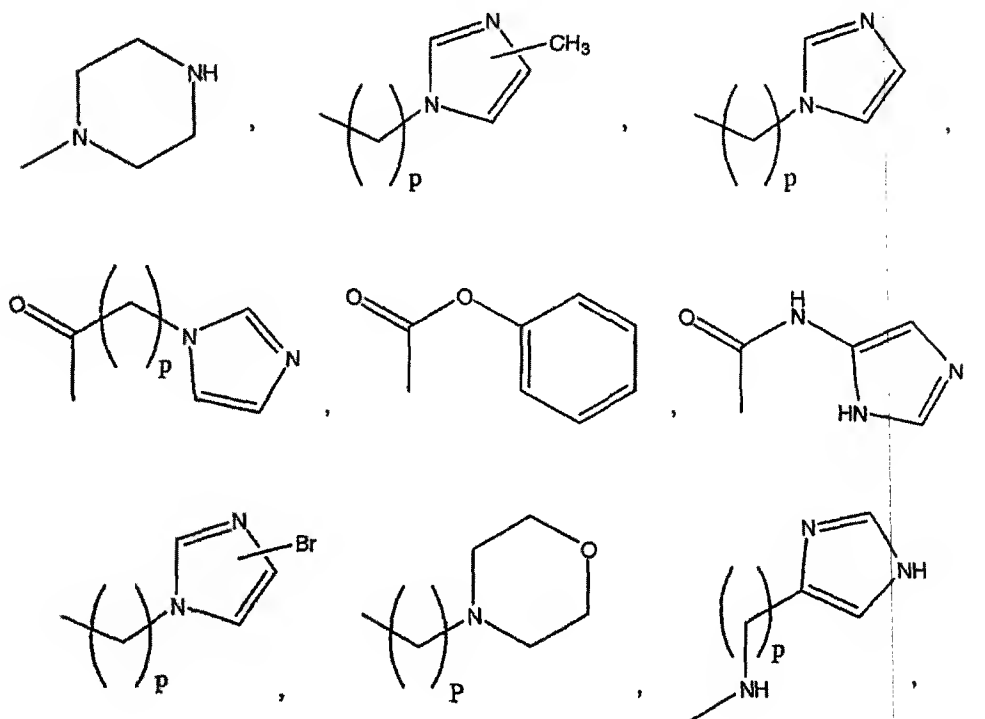

(10)  $-(CH_2)_pNR^{51}C(O)R^{27}$ , optionally,  $R^{51}$  and  $R^{27}$ , taken together with the atoms to which they are bound, form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;

(12)  $-(\text{CH}_2)_p\text{NR}^{51}\text{C}(\text{O})\text{NR}^{27}$ , optionally,  $\text{R}^{51}$  and  $\text{R}^{27}$ , taken together with the atoms to which they are bound, form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $\text{R}^{51}$  and  $\text{R}^{27}$  form a ring,  $\text{R}^{51}$  is not H and

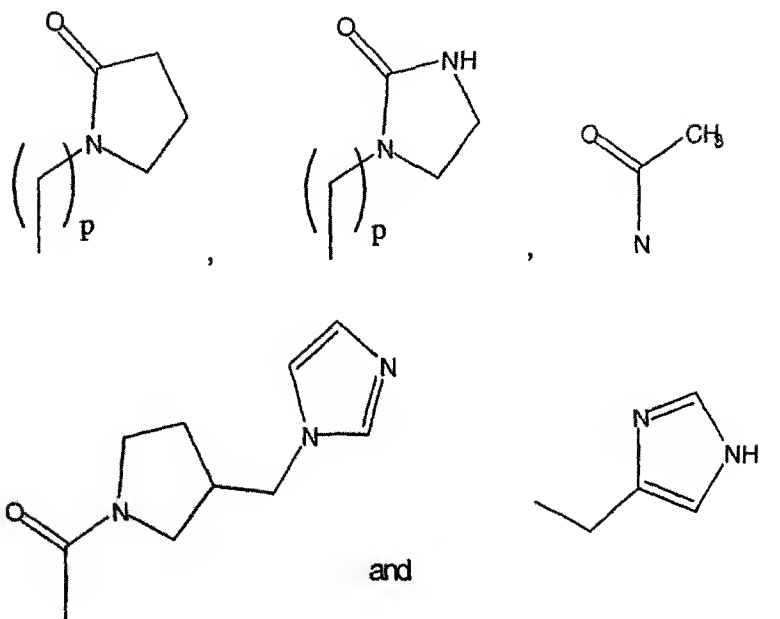

5

(13)  $-\text{NHR}^9$ .

Examples of A and B include but are not limited to:

27

wherein p is 0, 1, 2, 3 or 4;

5

When the optional bond between C-5 and C-6 is present (i.e., there is a double bond between C-5 and C-6), then preferably one of A or B is H and the other is R<sup>9</sup>, and preferably, R<sup>9</sup> is selected from:

- (1) heteroaryl;
- (2) substituted heteroaryl;
- (3) arylalkyl;
- (4) substituted arylalkyl;
- (5) arylalkoxy;
- (6) substituted arylalkoxy;
- (7) heterocycloalkyl;
- (8) substituted heterocycloalkyl;
- (9) heterocycloalkylalkyl;
- (10) substituted heterocycloalkylalkyl;
- (11) heteroarylalkyl;
- (12) substituted heteroarylalkyl;
- (13) alkenyl;
- (14) substituted alkenyl;

- (15) heteroarylalkenyl and
- (16) substituted heteroarylalkenyl,

wherein the substituents for said substituted  $R^9$  groups are each independently selected from:

- 5 (1) -OH;
- (2)  $-CO_2R^{14}$ ;
- (3)  $-CH_2OR^{14}$ ;
- (4) halo,
- (5) alkyl (e.g. methyl, ethyl, propyl, butyl or t-butyl);
- 10 (6) amino;
- (7) trityl;
- (8) heterocycloalkyl;
- (9) arylalkyl;
- (10) heteroaryl and
- 15 (11) heteroarylalkyl,

wherein  $R^{14}$  is independently selected from: H; or alkyl, preferably methyl or ethyl.

More preferably, when there is a double bond between C-5 and C-6, A is H and B is  $R^9$ . Most preferably, when there is a double bond between C-5 and C-6, A is

- 20 H and B is  $R^9$  wherein  $R^9$  is selected from:

- (1) arylalkyl;
- (2) substituted arylalkyl;
- (3) arylalkoxy;
- (4) substituted arylalkoxy;
- 25 (5) heterocycloalkyl;
- (6) substituted heterocycloalkyl;
- (7) heterocycloalkylalkyl;
- (8) substituted heterocycloalkylalkyl;
- (9) heteroarylalkyl;
- 30 (10) substituted heteroarylalkyl;
- (11) alkenyl;
- (12) substituted alkenyl;
- (13) heteroarylalkenyl and

(14) substituted heteroarylalkenyl,  
wherein the substituents for said substituted  $R^9$  groups are independently selected from:

- (1) -OH;
- 5 (2) halo, (preferably Br);
- (3) alkyl (e.g. methyl, ethyl, propyl, butyl, or t-butyl);
- (4) amino and
- (5) trityl.

Still more preferably, when there is a double bond between C-5 and C-6, A is H  
10 and B is  $R^9$  wherein  $R^9$  is selected from:

- (1) heterocycloalkylalkyl;
- (2) substituted heterocycloalkylalkyl;
- (3) heteroarylalkyl and
- (4) substituted heteroarylalkyl,

15 wherein said substituents for said substituted  $R^9$  groups are the same or different alkyl groups (e.g., C1-C4 alkyl).

Even more preferably, when there is a double bond between C-5 and C-6, A is H and B is  $R^9$  wherein  $R^9$  is selected from:

- (1) heteroaryl(C1-C3)alkyl and
- 20 (2) substituted heteroaryl(C1-C3)alkyl,

wherein the substituents for said substituted  $R^9$  group are as defined above.

Yet still more preferably, when there is a double bond between C-5 and C-6, A is H and B is  $R^9$  wherein  $R^9$  is selected from:

- (1) heteroaryl(C1-C3)alkyl, with heteroaryl-CH<sub>2</sub>- being preferred and
- 25 (2) substituted heteroaryl(C1-C3)alkyl, with substituted heteroaryl-CH<sub>2</sub>- being preferred,

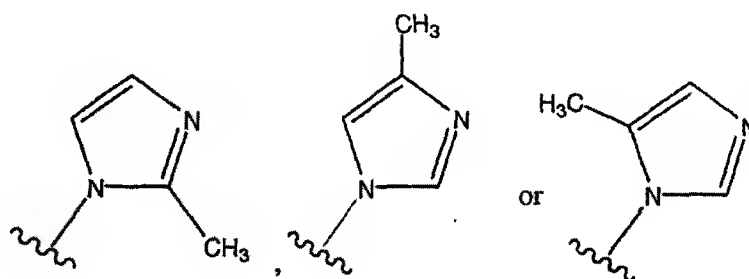

wherein the substituents for said substituted  $R^9$  groups are selected from one or more (e.g. 1, 2 or 3) with one being preferred, of the same or different alkyl groups (e.g., -CH<sub>3</sub>, -C<sub>2</sub>H<sub>5</sub>, -C<sub>3</sub>H<sub>7</sub>) with -CH<sub>3</sub> being preferred.

30 Even still more preferably, when there is a double bond between C-5 and C-6, A is H and B is  $R^9$  wherein  $R^9$  is selected from:

- (1) -CH<sub>2</sub>-imidazolyl;
- (2) substituted imidazolyl-CH<sub>2</sub>-;

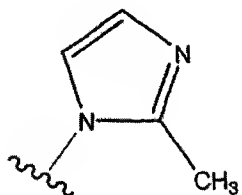

- 5
- (3)  $-(CH_2)_2$ -imidazolyl;
  - (4) substituted imidazolyl- $(CH_2)_2$ -;
  - (5)  $-(CH_2)_3$ -imidazolyl;
  - (6) substituted imidazolyl- $(CH_2)_3$ -;
  - 10 (7)  $-CH_2$ -piperazinyl and
  - (8)  $-CH_2$ -morphollinyl;

wherein the substituents for said substituted  $R^9$  groups are selected from one or more (e.g. 1, 2 or 3), with one being preferred, of the same or different alkyl groups (e.g.,  $-CH_3$ ,  $-C_2H_5$ ,  $-C_3H_4$ ) with  $-CH_3$  being preferred; and wherein, the substituted imidazolyl groups:

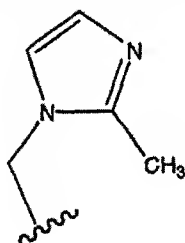

are preferred, with

15

being most preferred.

Yet still more preferably, when there is a double bond between C-5 and C-6, A is H and B is  $R^9$  wherein  $R^9$  is substituted imidazolyl- $CH_2$ -, with

being preferred.

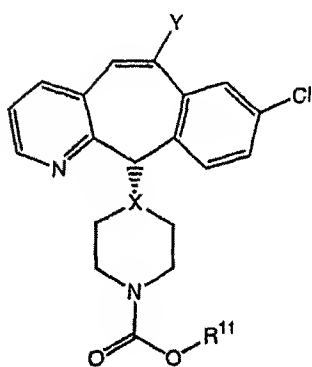

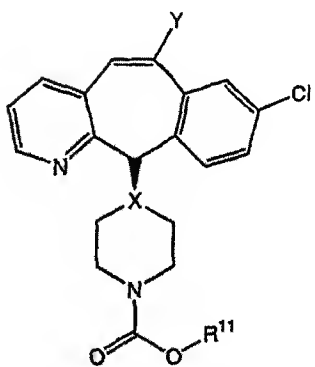

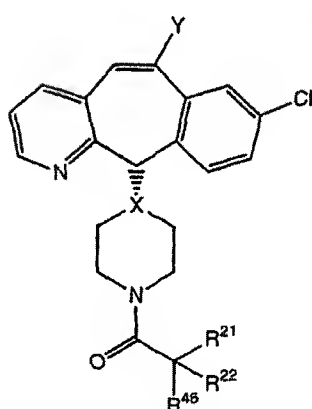

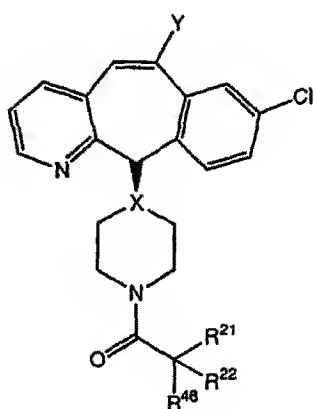

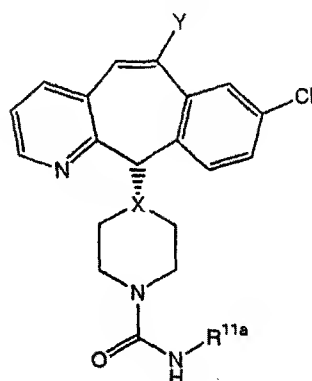

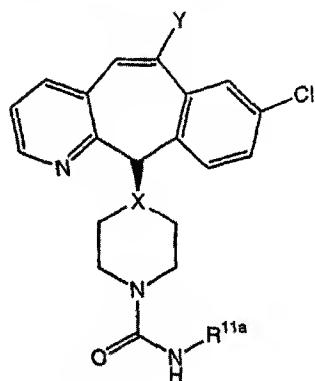

20

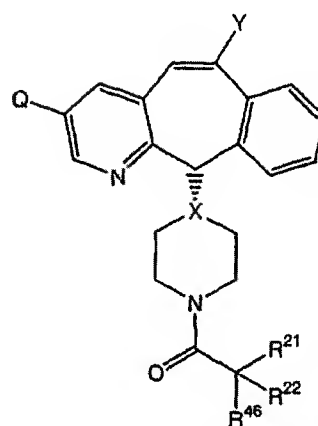

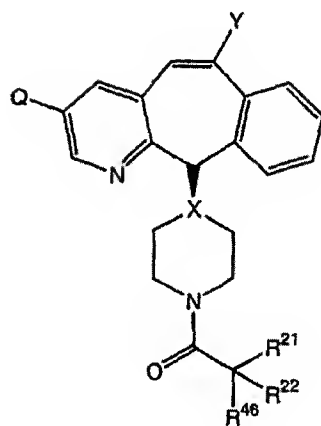

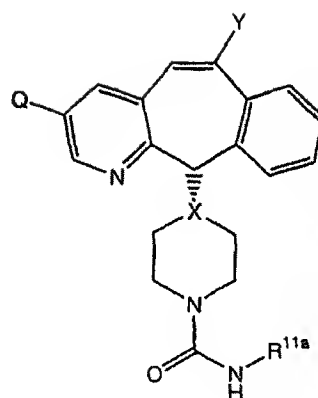

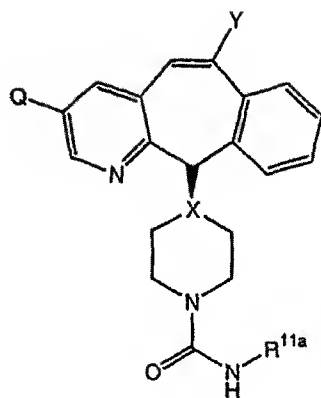

When B is H and A is R<sup>9</sup>, and there is a double bond between C-5 and C-6, the R<sup>9</sup> groups for A are those described above for B.

When the optional bond between C-5 and C-6 is not present (i.e., there is a  
5 single bond between C-5 and C-6), each A and each B are independently selected  
and the definitions of A and B are the same as those described above when the  
optional bond is present, provided that when there is a single bond between C-5 and  
C-6 then one of the two A substituents or one of the two B substituents is H (i.e., when  
there is a single bond between C-5 and C-6 one of the four substituents (A, A, B, and  
10 B) has to be H).

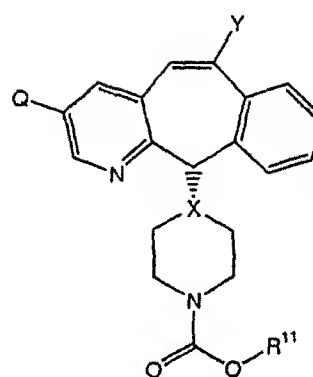

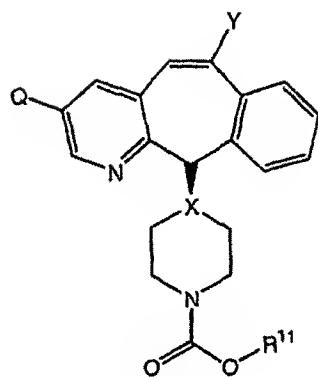

Preferably, there is a double bond between C-5 and C-6.

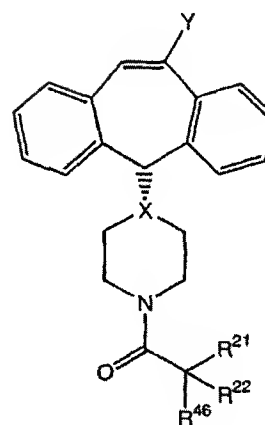

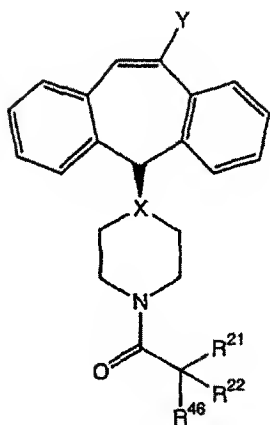

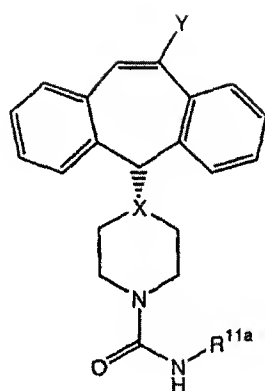

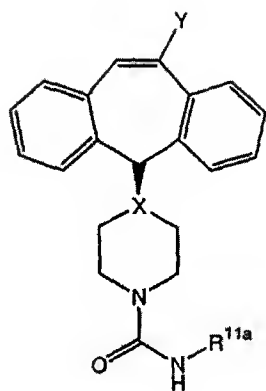

Compounds of this invention having C-11 R- and S- stereochemistry include:

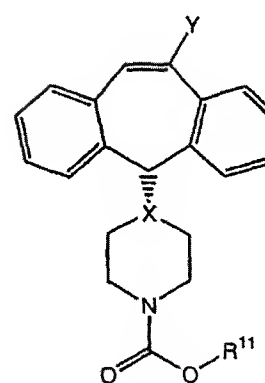

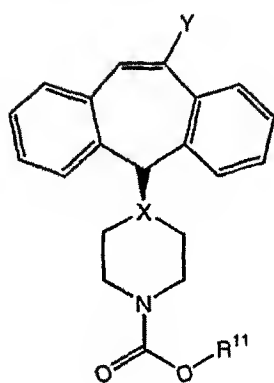

5

5

10

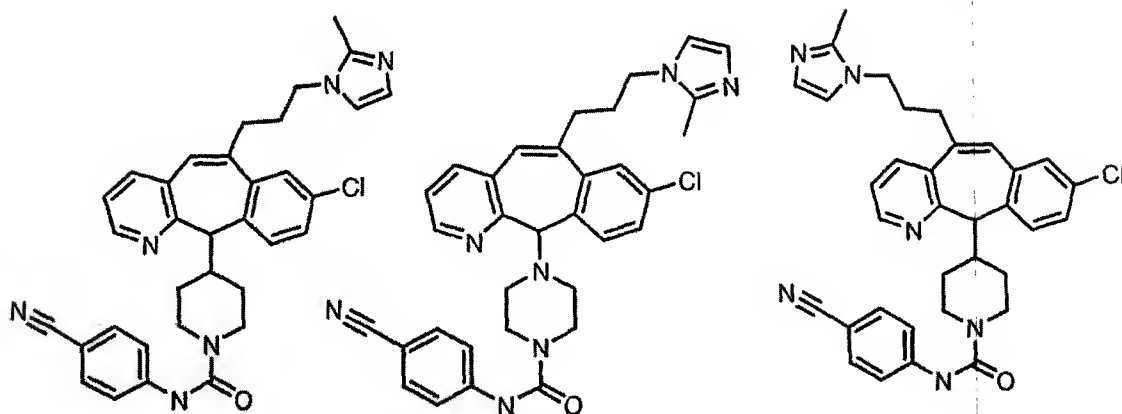

wherein X = N or C;

Q = Br or Cl;

Y = alkyl, arylalkyl, or heteroarylalkyl.

Preferred compounds of this invention are listed below:

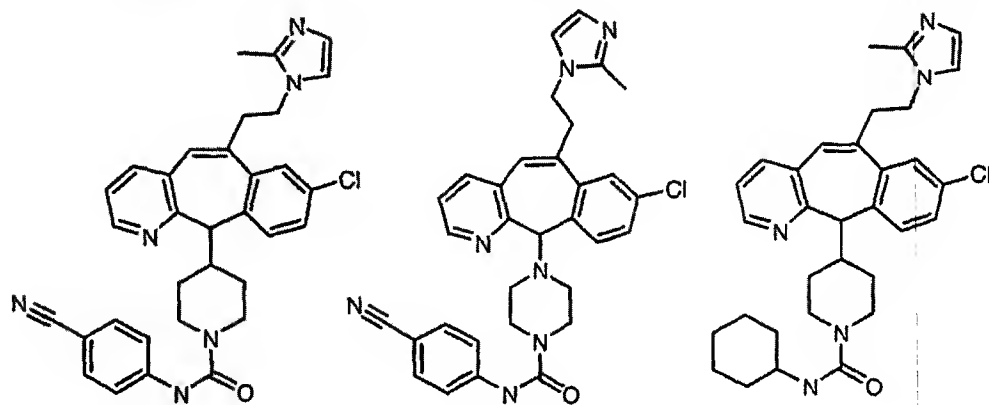

5

(139)

(628)

(699)

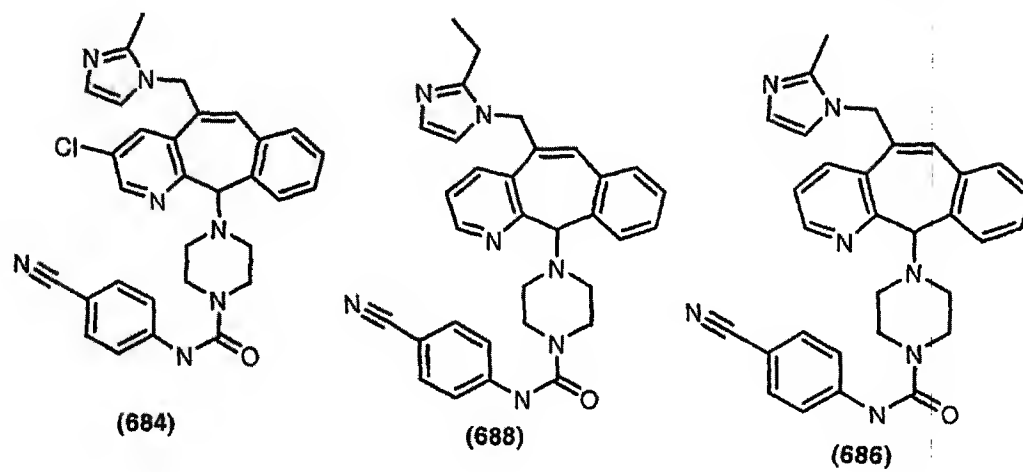

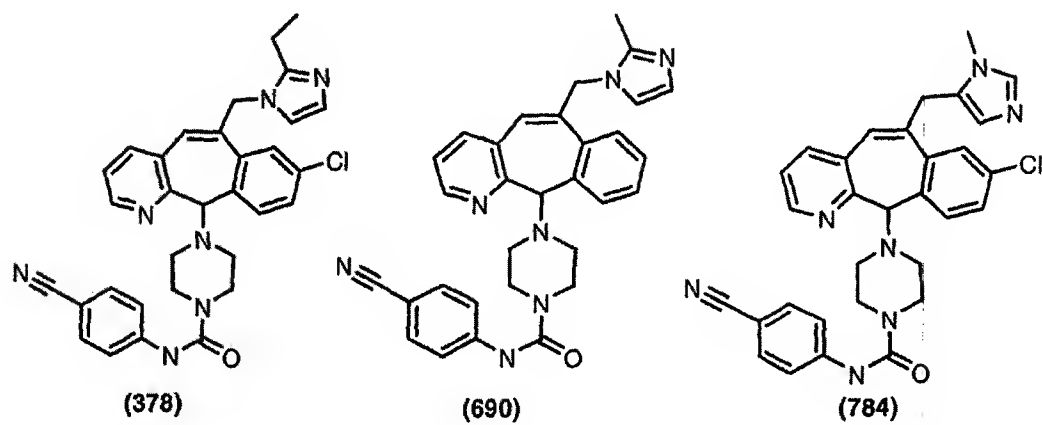

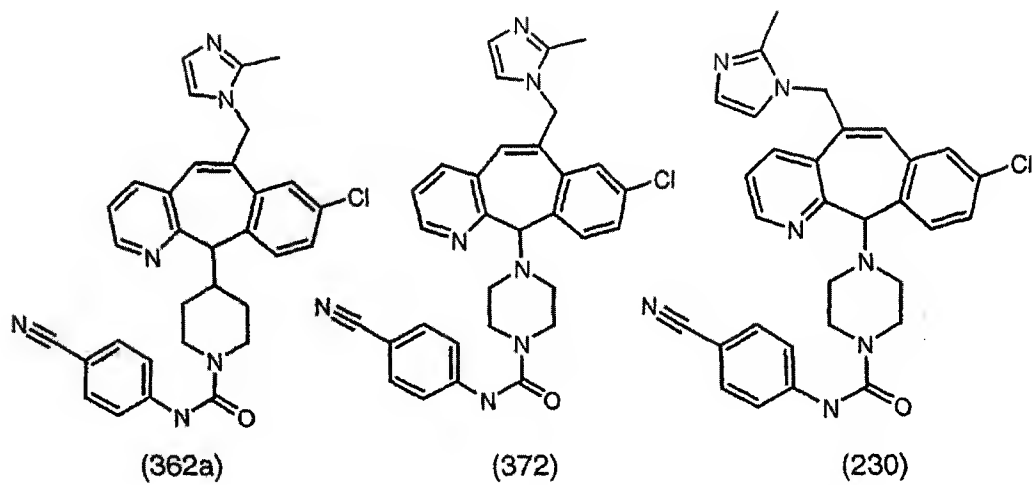

(326)

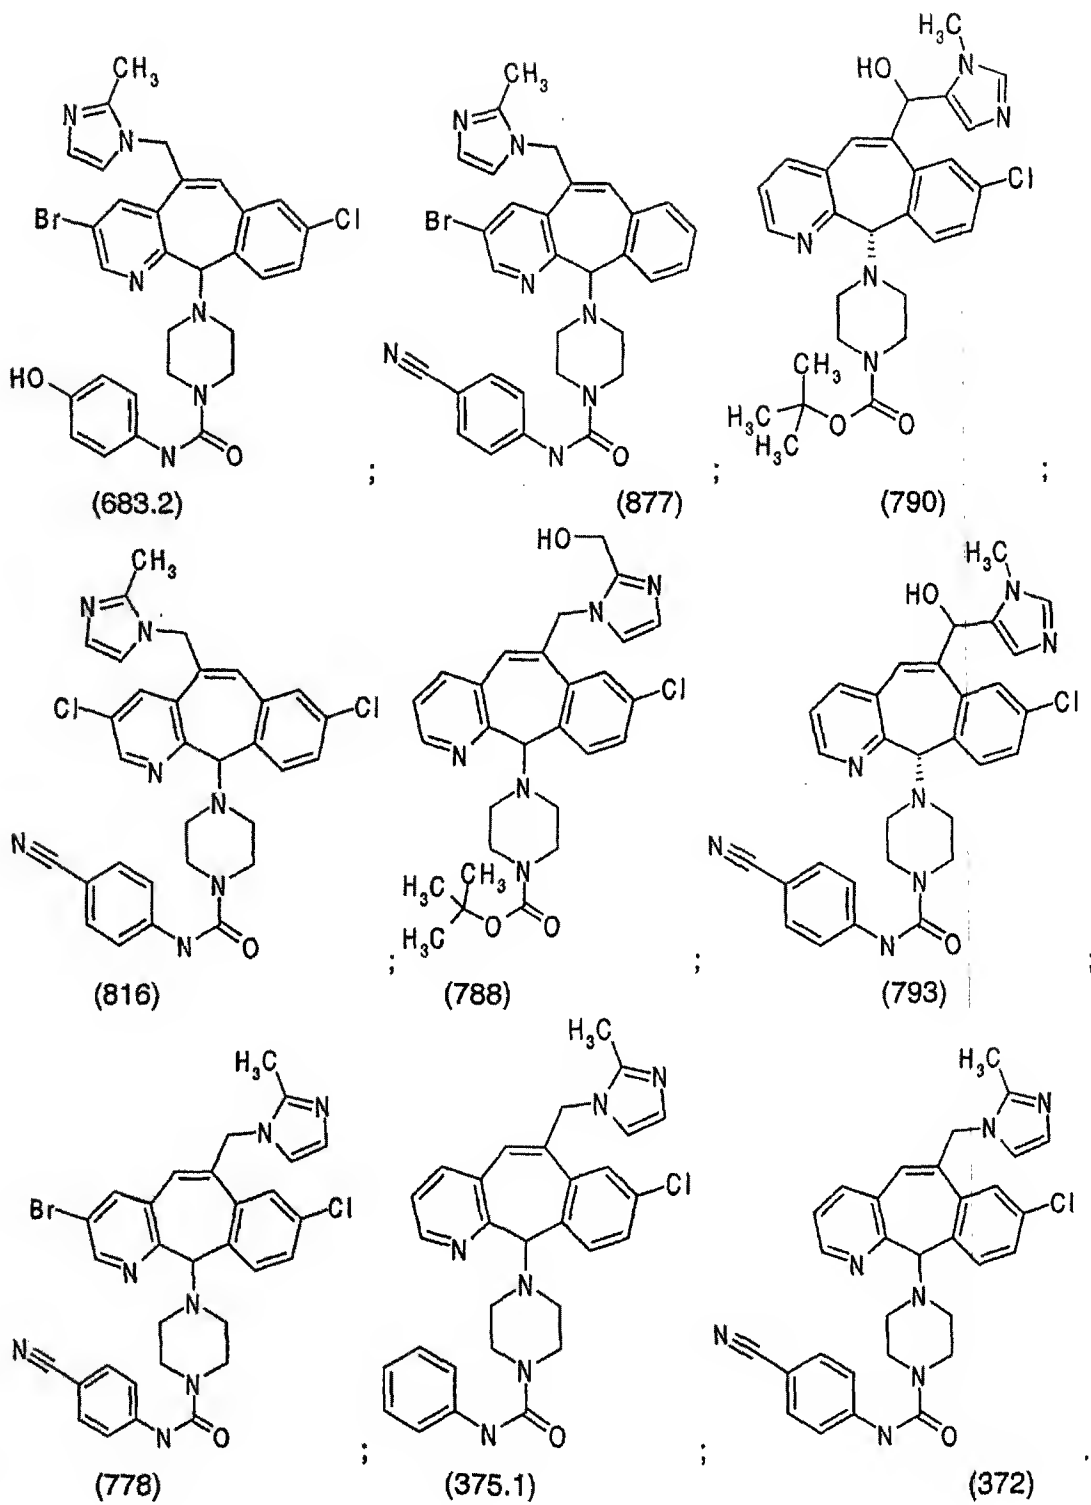

(644)

(332)

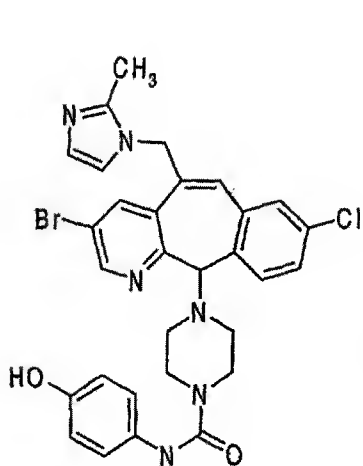

10

36

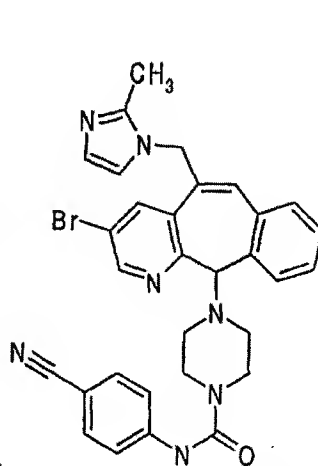

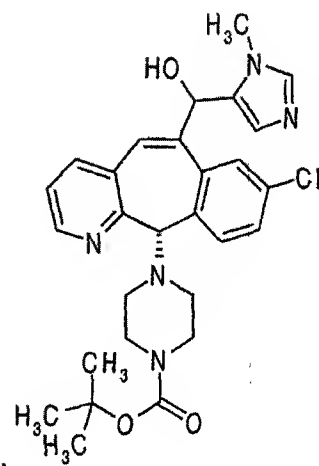

More preferred compounds of this invention are listed below:

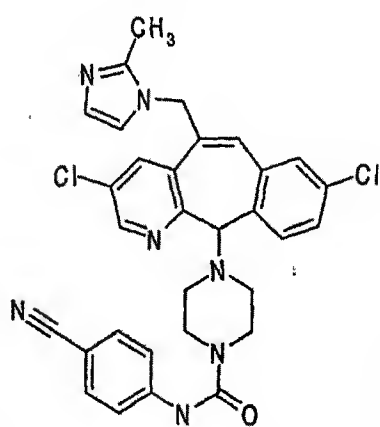

(683.2)

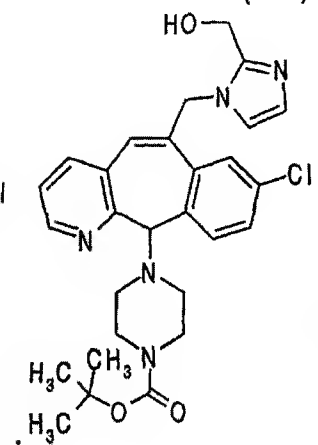

(877)

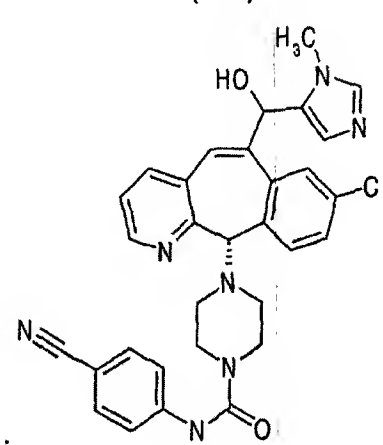

(790)

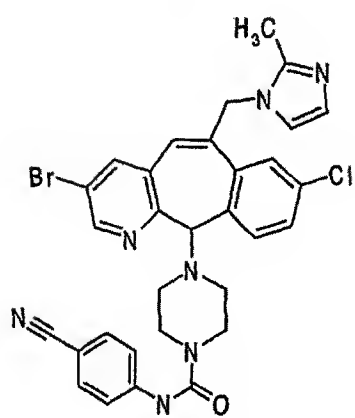

(816)

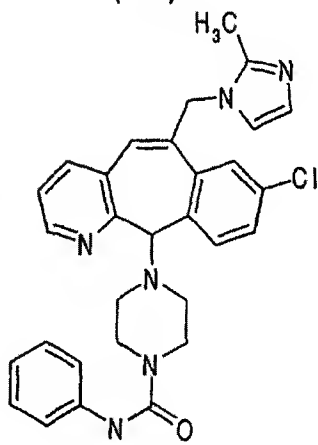

(788)

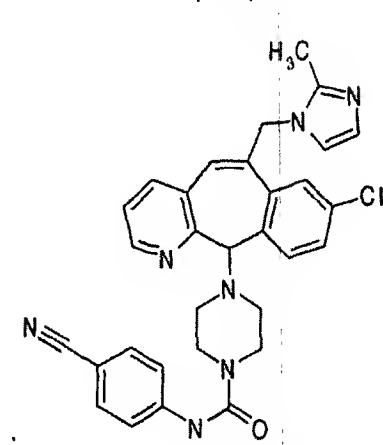

(793)

(778)

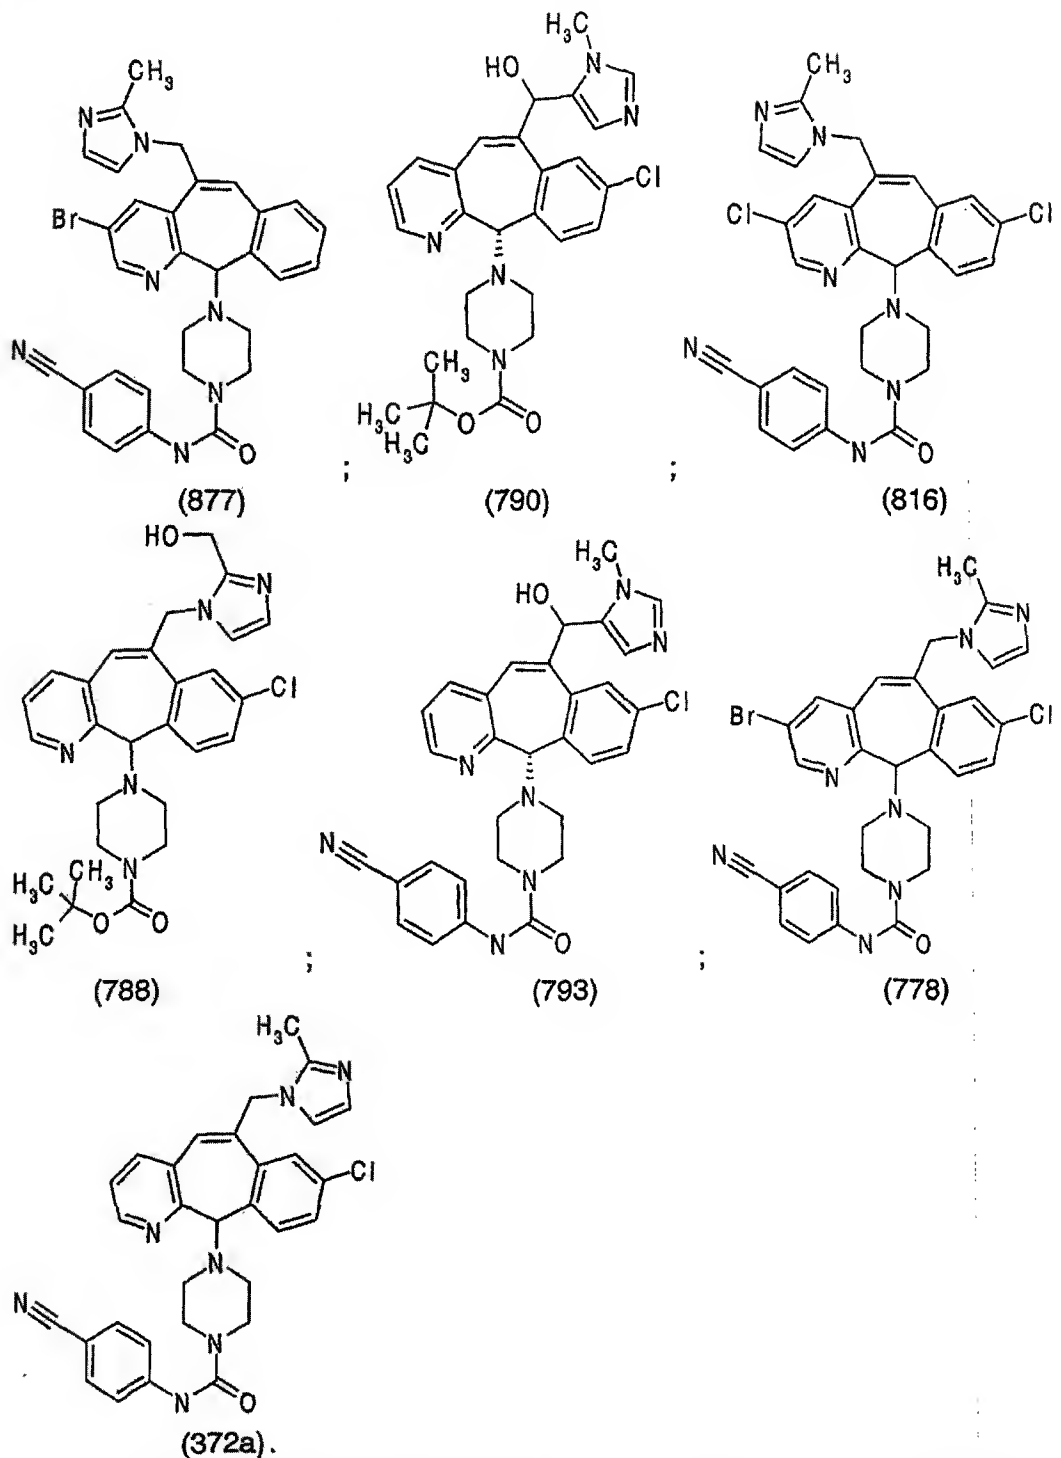

(375.1)

(372)

Most preferred compounds of this invention are listed below:

Lines drawn into the ring systems indicate that the indicated bond may be attached to any of the substitutable ring carbon atoms.

Certain compounds of the invention may exist in different isomeric (e.g., enantiomers, diastereoisomers, atropisomers) forms. The invention contemplates all such isomers both in pure form and in admixture, including racemic mixtures. Enol forms are also included.

5        Certain tricyclic compounds will be acidic in nature, e.g. those compounds which possess a carboxyl or phenolic hydroxyl group. These compounds may form pharmaceutically acceptable salts. Examples of such salts may include sodium, potassium, calcium, aluminum, gold and silver salts. Also contemplated are salts formed with pharmaceutically acceptable amines such as ammonia, alkyl amines,  
10    hydroxyalkylamines, N-methylglucamine and the like.

      Certain basic tricyclic compounds also form pharmaceutically acceptable salts, e.g., acid addition salts. For example, the pyrido-nitrogen atoms may form salts with strong acid, while compounds having basic substituents such as amino groups also form salts with weaker acids. Examples of suitable acids for salt formation are  
15    hydrochloric, sulfuric, phosphoric, acetic, citric, oxalic, malonic, salicylic, malic, fumaric, succinic, ascorbic, maleic, methanesulfonic and other mineral and carboxylic acids well known to those in the art. The salts are prepared by contacting the free base form with a sufficient amount of the desired acid to produce a salt in the conventional manner. The free base forms may be regenerated by treating the salt  
20    with a suitable dilute aqueous base solution such as dilute aqueous NaOH, potassium carbonate, ammonia and sodium bicarbonate. The free base forms differ from their respective salt forms somewhat in certain physical properties, such as solubility in polar solvents, but the acid and base salts are otherwise equivalent to their respective free base forms for purposes of the invention.

25        All such acid and base salts are intended to be pharmaceutically acceptable salts within the scope of the invention and all acid and base salts are considered equivalent to the free forms of the corresponding compounds for purposes of the invention.

      The compounds of formula 1.0 can exist in unsolvated as well as solvated  
30    forms, including hydrated forms, e.g., hemi-hydrate. In general, the solvated forms, with pharmaceutically acceptable solvents such as water, ethanol and the like are equivalent to the unsolvated forms for purposes of the invention.

The method of treating proliferative diseases (cancer), according to this invention, includes a method for treating (inhibiting) the abnormal growth of cells, including transformed cells, in a patient in need of such treatment (e.g., a mammal such as a human), by administering, concurrently or sequentially, an effective amount of a compound of this invention and an effective amount of a chemotherapeutic agent and/or radiation. Abnormal growth of cells means cell growth independent of normal regulatory mechanisms (e.g., loss of contact inhibition), including the abnormal growth of: (1) tumor cells (tumors) expressing an activated ras oncogene; (2) tumor cells in which the ras protein is activated as a result of oncogenic mutation in another gene; and (3) benign and malignant cells of other proliferative diseases.

In preferred embodiments, the methods of the present invention include methods for treating or inhibiting tumor growth in a patient in need of such treatment (e.g., a mammal such as a human) by administering, concurrently or sequentially, (1) an effective amount of a compound of this invention and (2) an effective amount of at least one antineoplastic agent, microtubule affecting agent and/or radiation therapy. Examples of tumors which may be treated include, but are not limited to, epithelial cancers, e.g., prostate cancer, lung cancer (e.g., lung adenocarcinoma), pancreatic cancers (e.g., pancreatic carcinoma such as, for example, exocrine pancreatic carcinoma), breast cancers, colon cancers (e.g., colorectal carcinomas, such as, for example, colon adenocarcinoma and colon adenoma), ovarian cancer, and bladder carcinoma. Other cancers that can be treated include melanoma, myeloid leukemias (for example, acute myelogenous leukemia), sarcomas, thyroid follicular cancer, and myelodysplastic syndrome. In particular, the proliferative disease (tumor) that may be treated is selected from lung cancer, pancreatic cancer, prostate cancer and myeloid leukemia. Preferably for the methods of the present invention, the disease (tumor) that may be treated is selected from lung cancer and myeloid leukemia.

The methods of treating proliferative diseases, according to this invention, also include a method for treating (inhibiting) proliferative diseases, both benign and malignant, wherein ras proteins are aberrantly activated as a result of oncogenic mutation in other genes – i.e., the ras gene itself is not activated by mutation to an oncogenic form. This method comprises administering, concurrently or sequentially, an effective amount of a compound of this invention and an effective amount of an antineoplastic agent and/or radiation therapy to a patient in need of such treatment

(e.g., a mammal such as a human). Examples of such proliferative diseases which may be treated include: the benign proliferative disorder neurofibromatosis, or tumors in which ras is activated due to mutation or overexpression of tyrosine kinase oncogenes (e.g., neu, src, abl, lck, lyn, fyn).

5 For radiation therapy,  $\gamma$ -radiation is preferred.

The methods of treating proliferative diseases (cancer), according to this invention, also include a method for treating (inhibiting) the abnormal growth of cells, including transformed cells, in a patient in need of such treatment (e.g., a mammal such as a human), by administering, concurrently or sequentially, an effective amount  
10 of a compound of this invention and an effective amount of at least one signal transduction inhibitor.

Typical signal transduction inhibitors include but are not limited to:

- (i) Bcr/abl kinase inhibitors such as, for example, STI 571 (Gleevec);
- (ii) Epidermal growth factor (EGF) receptor inhibitor such as, for example,  
15 Kinase inhibitors (Iressa, OSI-774) and antibodies (Imclone: C225 [Goldstein et al. (1995), Clin Cancer Res. 1:1311-1318], and Abgenix: ABX-EGF) and
- (iii) Her-2/neu receptor inhibitors such as, for example, Herceptin® (trastuzumab).

As used herein the following terms have the following meanings unless  
20 indicated otherwise:

antineoplastic agent - a chemotherapeutic agent effective against cancer;

concurrently - (1) simultaneously in time, or (2) at different times during the  
25 course of a common treatment schedule; and

sequentially - (1) administration of one component of the method ((a) compound of the invention, or (b) chemotherapeutic agent, signal transduction inhibitor and/or radiation therapy) followed by administration of the other component or  
30 components; after administration of one component, the next component can be administered substantially immediately after the first component, or the next component can be administered after an effective time period after the first

component; the effective time period is the amount of time given for realization of maximum benefit from the administration of the first component.

The term "in association with" as used herein in reference to the combination therapies of the invention means-the agents or components are administered  
5 concurrently or sequentially as defined above.

### CHEMOTHERAPEUTIC AGENTS

10       Classes of compounds that can be used as chemotherapeutic agents (antineoplastic agent/microtubule affecting agents) include but are not limited to: alkylating agents, antimetabolites, natural products and their derivatives, hormones and steroids (including synthetic analogs), and synthetics. Examples of compounds within these classes are given below.

15

Alkylating agents (including nitrogen mustards, ethylenimine derivatives, alkyl sulfonates, nitrosoureas and triazenes): Uracil mustard, Chloromethine, Cyclophosphamide (Cytosan<sup>®</sup>), Ifosfamide, Melphalan, Chlorambucil, Pipobroman, Triethylene-melamine, Triethylenethiophosphoramine, Busulfan, Carmustine,  
20 Lomustine, Streptozocin, Dacarbazine, and Temozolomide.

Antimetabolites (including folic acid antagonists, pyrimidine analogs, purine analogs and adenosine deaminase inhibitors): Methotrexate, 5-Fluorouracil, Floxuridine, Cytarabine, 6-Mercaptopurine, 6-Thioguanine, Fludarabine phosphate, Pentostatine, and Gemcitabine.

25

Natural products and their derivatives (including vinca alkaloids, antitumor antibiotics, enzymes, lymphokines and epipodophyllotoxins): Vinblastine, Vincristine, Vindesine, Bleomycin, Dactinomycin, Daunorubicin, Doxorubicin, Epirubicin, Idarubicin, paclitaxel (paclitaxel is commercially available as Taxol<sup>®</sup> and is described in more detail below in the subsection entitled "Microtubule Affecting Agents"),  
30 paclitaxel derivatives (e.g. taxotere), Mithramycin, Deoxyco-formycin, Mitomycin-C, L-Asparaginase, Interferons (especially IFN-a), Etoposide, and Teniposide.

Hormones and steroids (including synthetic analogs): 17 $\alpha$ -Ethinylestradiol, Diethylstilbestrol, Testosterone, Prednisone, Fluoxymesterone, Dromostanolone

propionate, Testolactone, Megestrolacetate, Tamoxifen, Methylprednisolone, Methyltestosterone, Prednisolone, Triamcinolone, Chlorotrianisene, Hydroxyprogesterone, Aminoglutethimide, Estramustine, Medroxyprogesteroneacetate, Leuprolide, Flutamide, Toremifene, Zoladex.

5 Synthetics (including inorganic complexes such as platinum coordination complexes): Cisplatin, Carboplatin, Hydroxyurea, Amsacrine, Procarbazine, Mitotane, Mitoxantrone, Levamisole, and Hexamethylmelamine.

Particularly preferred are the antineoplastic agents selected from Cyclophosphamide, 5-Fluorouracil, Temozolomide, Vincristine, Cisplatin, Carboplatin, and Gemcitabine. Most preferably, the antineoplastic agent is selected from Gemcitabine, Cisplatin and Carboplatin.

Methods for the safe and effective administration of most of these chemotherapeutic agents are known to those skilled in the art. In addition, their administration is described in the standard literature. For example, the administration of many of the chemotherapeutic agents is described in the "Physicians' Desk Reference" (PDR), e.g., 1996 edition (Medical Economics Company, Montvale, NJ 07645-1742, USA); the disclosure of which is incorporated herein by reference thereto.

## 20 MICROTUBULE AFFECTING AGENTS

608832), thiocolchicine (NSC 361792), trityl cysteine (NSC 83265), vinblastine sulfate (NSC 49842), vincristine sulfate (NSC 67574), epothilone A, epothilone, and discodermolide (see Service, (1996) Science, 274:2009) estramustine, nocodazole, MAP4, and the like. Examples of such agents are also described in the scientific and patent literature, see, e.g., Bulinski (1997) J. Cell Sci. 110:3055-3064; Panda (1997) Proc. Natl. Acad. Sci. USA 94:10560-10564; Muhlradt (1997) Cancer Res. 57:3344-3346; Nicolaou (1997) Nature 387:268-272; Vasquez (1997) Mol. Biol. Cell. 8:973-985; Panda (1996) J. Biol. Chem. 271:29807-29812.

Particularly preferred agents are compounds with paclitaxel-like activity. These include, but are not limited to paclitaxel and paclitaxel derivatives (paclitaxel-like compounds) and analogues. Paclitaxel and its derivatives (e.g. Taxol and Taxotere) are available commercially. In addition, methods of making paclitaxel and paclitaxel derivatives and analogues are well known to those of skill in the art (see, e.g., U.S. Patent Nos: 5,569,729; 5,565,478; 5,530,020; 5,527,924; 5,508,447; 5,489,589; 5,488,116; 5,484,809; 5,478,854; 5,478,736; 5,475,120; 5,468,769; 5,461,169; 5,440,057; 5,422,364; 5,411,984; 5,405,972; and 5,296,506).

More specifically, the term "paclitaxel" as used herein refers to the drug commercially available as Taxol® (NSC number: 125973). Taxol® inhibits eukaryotic cell replication by enhancing polymerization of tubulin moieties into stabilized microtubule bundles that are unable to reorganize into the proper structures for mitosis. Of the many available chemotherapeutic drugs, paclitaxel has generated interest because of its efficacy in clinical trials against drug-refractory tumors, including ovarian and mammary gland tumors (Hawkins (1992) Oncology, 6: 17-23, Horwitz (1992) Trends Pharmacol. Sci. 13: 134-146, Rowinsky (1990) J. Natl. Canc. Inst. 82: 1247-1259).

Additional microtubule affecting agents can be assessed using one of many such assays known in the art, e.g., a semiautomated assay which measures the tubulin-polymerizing activity of paclitaxel analogs in combination with a cellular assay to measure the potential of these compounds to block cells in mitosis (see Lopes (1997) Cancer Chemother. Pharmacol. 41:37-47).

Generally, activity of a test compound is determined by contacting a cell with that compound and determining whether or not the cell cycle is disrupted, in particular, through the inhibition of a mitotic event. Such inhibition may be mediated by

disruption of the mitotic apparatus, e.g., disruption of normal spindle formation. Cells in which mitosis is interrupted may be characterized by altered morphology (e.g., microtubule compaction, increased chromosome number, etc.).

In a preferred embodiment, compounds with possible tubulin polymerization activity are screened in vitro. In a preferred embodiment, the compounds are screened against cultured WR21 cells (derived from line 69-2 wap-ras mice) for inhibition of proliferation and/or for altered cellular morphology, in particular for microtubule compaction. In vivo screening of positive-testing compounds can then be performed using nude mice bearing the WR21 tumor cells. Detailed protocols for this screening method are described by Porter (1995) Lab. Anim. Sci., 45(2):145-150.

Other methods of screening compounds for desired activity are well known to those of skill in the art. Typically such assays involve assays for inhibition of microtubule assembly and/or disassembly. Assays for microtubule assembly are described, for example, by Gaskin et al. (1974) J. Molec. Biol., 89: 737-758. U.S. Patent No. 5,569,720 also provides in vitro and in vivo assays for compounds with paclitaxel-like activity.

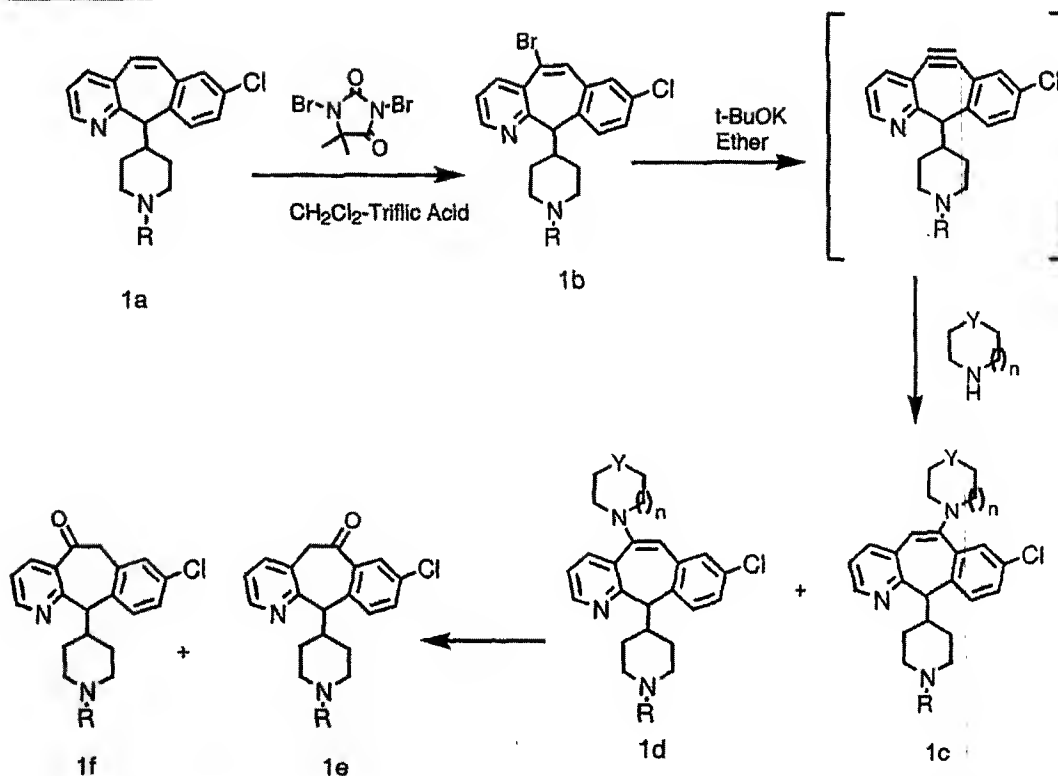

Methods for the safe and effective administration of the above-mentioned microtubule affecting agents are known to those skilled in the art. In addition, their administration is described in the standard literature. For example, the administration of many of the chemotherapeutic agents is described in the "Physicians' Desk Reference" (PDR), e.g., 1996 edition (Medical Economics Company, Montvale, NJ 07645-1742, USA); the disclosure of which is incorporated herein by reference thereto.

## **General Preparative Schemes**

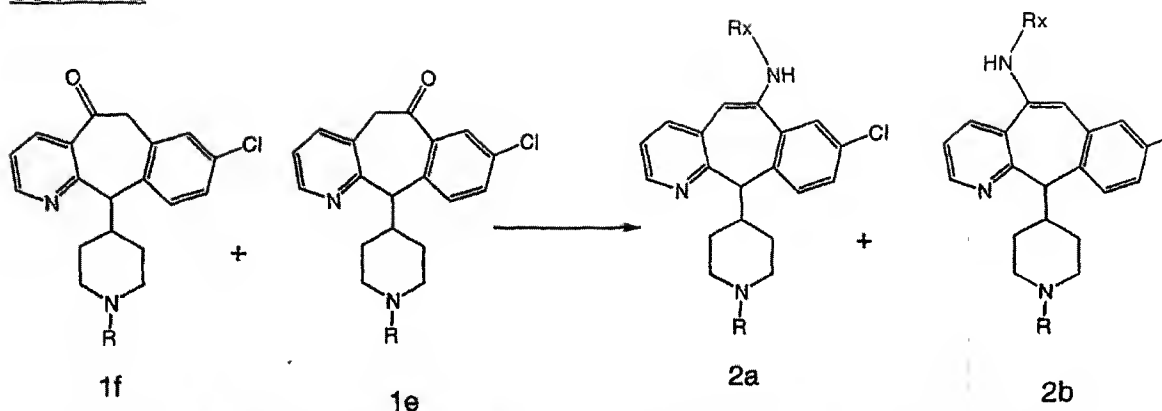

The following processes may be employed to produce compounds of the invention.

### **Pyridyl Tricyclic Compounds**

One skilled in the art will appreciate that the compounds of the invention represented by Formula 1, wherein one of a, b, c or d is N or N<sup>+</sup>-O<sup>-</sup> can be prepared according to the following schemes:

**Scheme 1:**

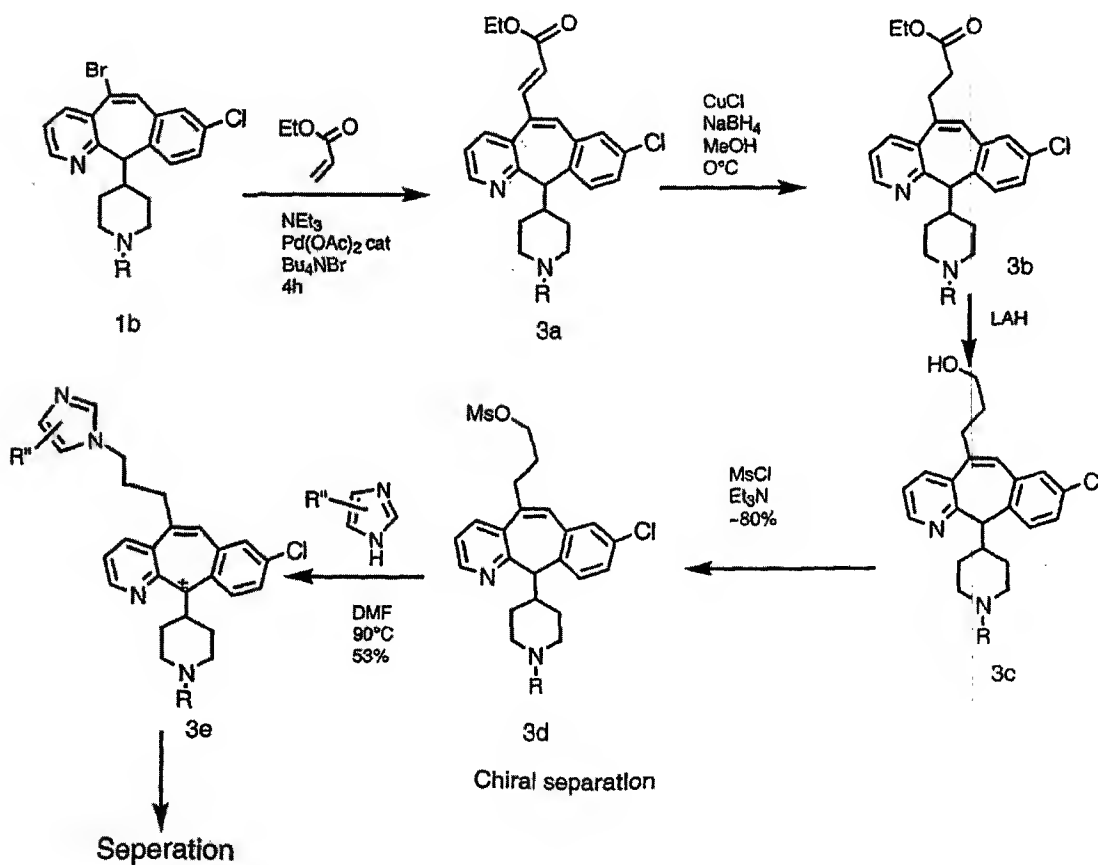

- 5 The synthesis of 5-bromo tricyclic compound **1b** begins with bridgehead olefin **1a** (*J. Med. Chem* (1998), **41**,1561-1567) which is treated with dibromo dimethylhydantoin in triflic acid media. Further treatment of the vinylbromide with potassium t-butoxide in the presence of the appropriate secondary amine gives the 5 and 6-substituted enamine adducts. When Y is NH (piperazine case), acylations, sulfonylations and amide formation can be carried out using standard procedures.
- 10 Treatment of these amine adducts with HCl(aq) at the appropriate temperatures results in the formation of the 5 and 6 azaketones, **1f** and **1e** respectively.

**Scheme 2**

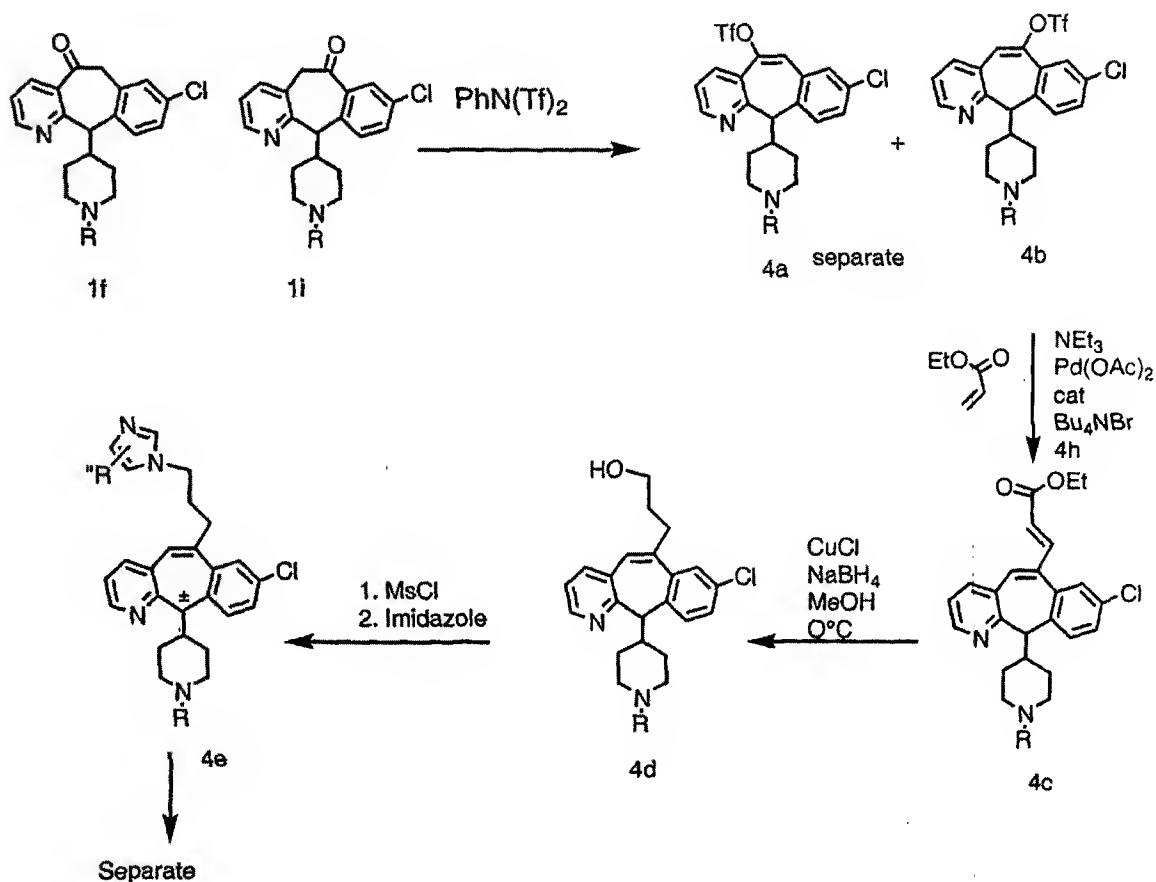

In cases where secondary enamines were required, synthesis from 1f and 1e-  
 azaketones were utilized as outlined in scheme 2. Thus, the appropriate ketone and  
 5 amine was refluxed in toluene in the presence of p-toluene sulfonic acid in a Dean  
 Stark apparatus.

**Scheme 3:**

10

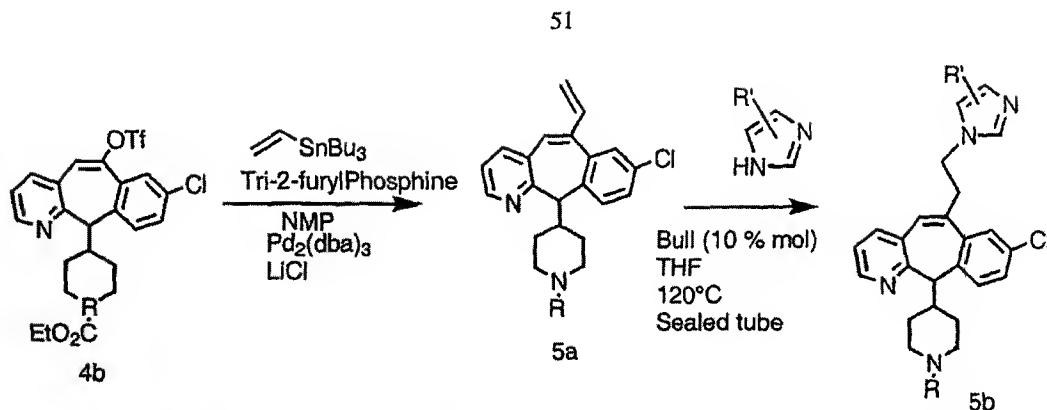

Synthesis of 3-carbon spaced analogs can be prepared as outlined in scheme 3. Thus, subjecting tricyclic vinyl bromide 1b to a *Hack type* reaction using ethyl acrylate and catalyzed by Pd<sup>0</sup> gives the  $\alpha$ - $\beta$  un-saturated ester 3a. Reduction of the conjugated double bond was carried out using copper chloride-sodium borohydride reducing reagent. The ester was further reduced to alcohol using lithium aluminum hydride. Treatment of the alcohol with methanesulfonyl chloride in an appropriate aprotic solvent, followed by displacement with an appropriate sodium salt resulted in the desired imidazole targets. In most cases, separation of isomers were effected at this point. Where the R group of 3e was a BOC group, deprotection using HCl-dioxane gave the hydrochloride salts of amines. Using standard chemistry, these amines were converted to ureas, carbamates, sulfonamides and amides.

**Scheme 4: PREPARATION OF 6-SUBSTITUTED CARBON ANALOGUES:**

Preparation of 6-substituted 3-carbon spaced imidazole compounds was carried out as outlined in scheme 4. A mixture of ketones **1f** and **1i** were treated with N-phenyltrifluoromethane sulfonimide to give a separable mixture of 5 and 6-tricyclic triflate compounds. The 6-triflate adduct was converted to the desired 3-carbon spaced analogs using similar protocol as described for the 5-bromo tricyclic compounds outlined in scheme 3.

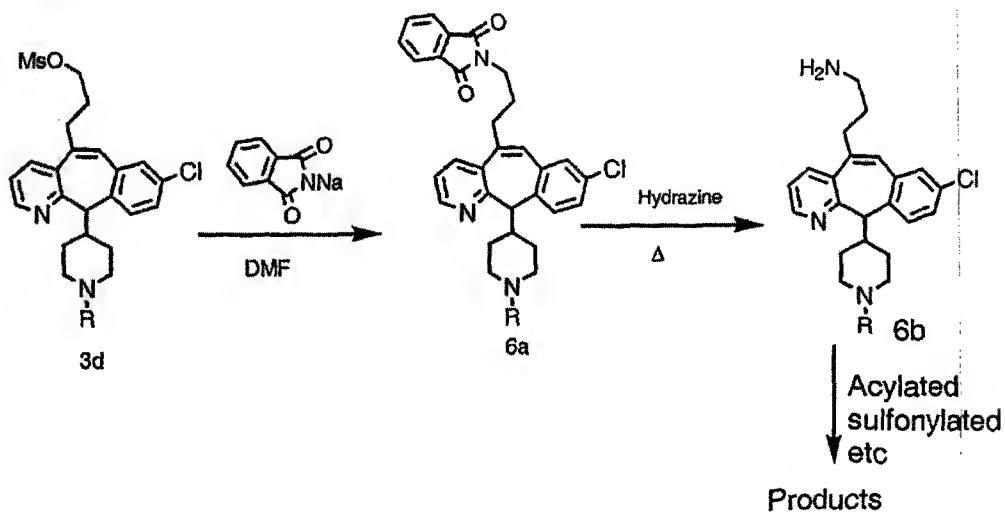

**Scheme 5: SYNTHESIS OF 2-CARBON SPACER ANALOGUES**

Two carbon spaced analogs were prepared as outlined in scheme 5. Thus, triflate 4b was subjected to Stille chemistry, by reacting with tributylvinyl stannate catalyzed by an appropriate  $\text{Pd}^0$  to afford the tricyclic vinyl compound 5b. The 2-carbon spaced compounds were obtained by treating the tricyclic compound with the appropriate imidazole that had been previously treated with BuLi-THF in a sealed tube and refluxed at 120 °C. Further functionalization was carried out as previously described. Suberane compounds were prepared in a similar way.

10

Scheme 6:

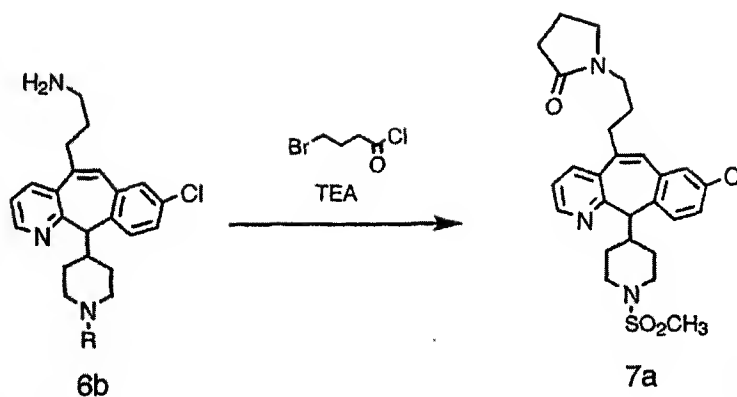

15

Scheme 6 illustrates method of making amine 6b through phthalimido displacement of a mesylate followed by hydrazine hydrolysis of the phthalimido moiety. Amine 6b can be converted to targets that have acyl, sulfonyl, carbamoyl and urea functionalities.

**Scheme 7:**

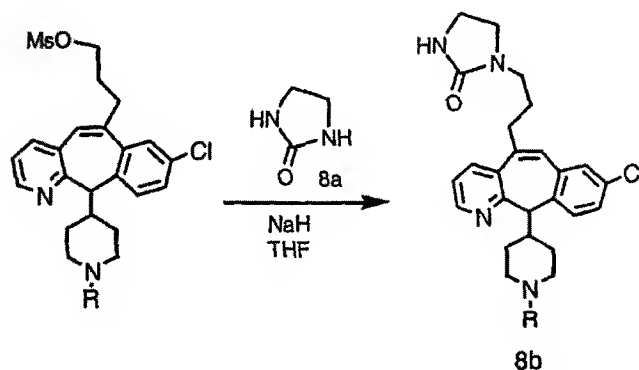

5

10 Lactams 7a can be prepared from amine 6b by reacting with bromobutanoyl acid chloride as outlined in scheme 7.

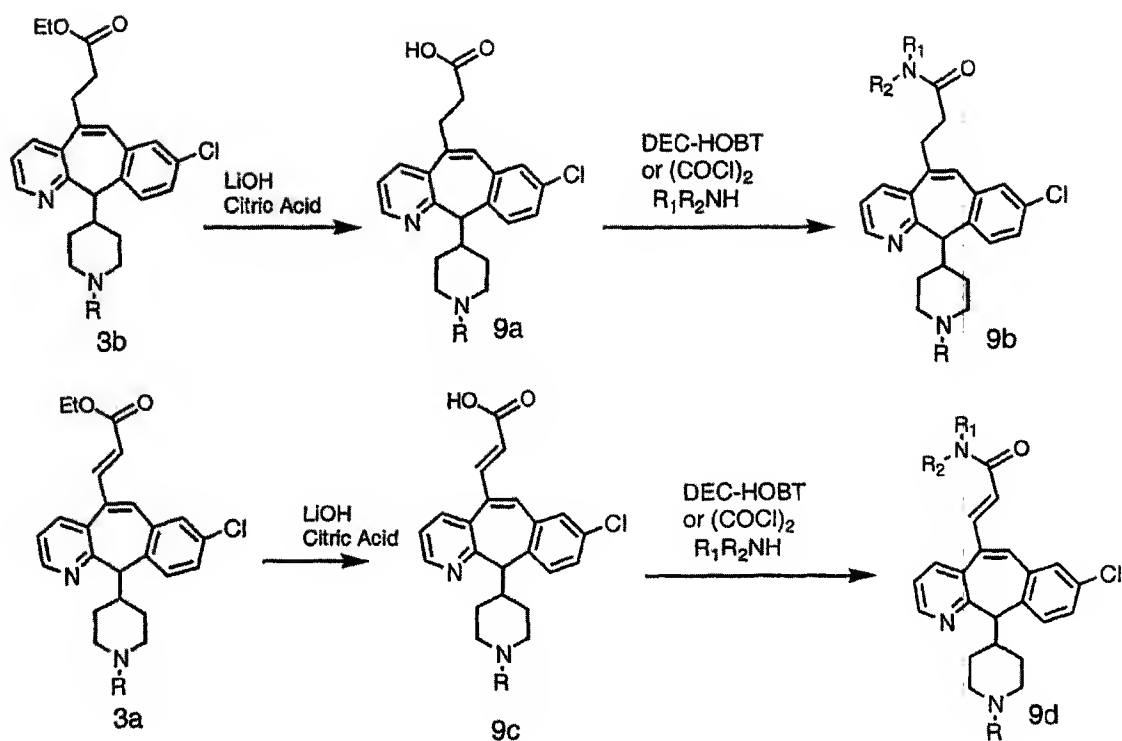

**Scheme 8: Preparation of cyclic ureas**

15

20 Cyclic urea can be prepared from the mesylate shown above by treating with the salt of the cyclic urea 8a as outlined in scheme 8.

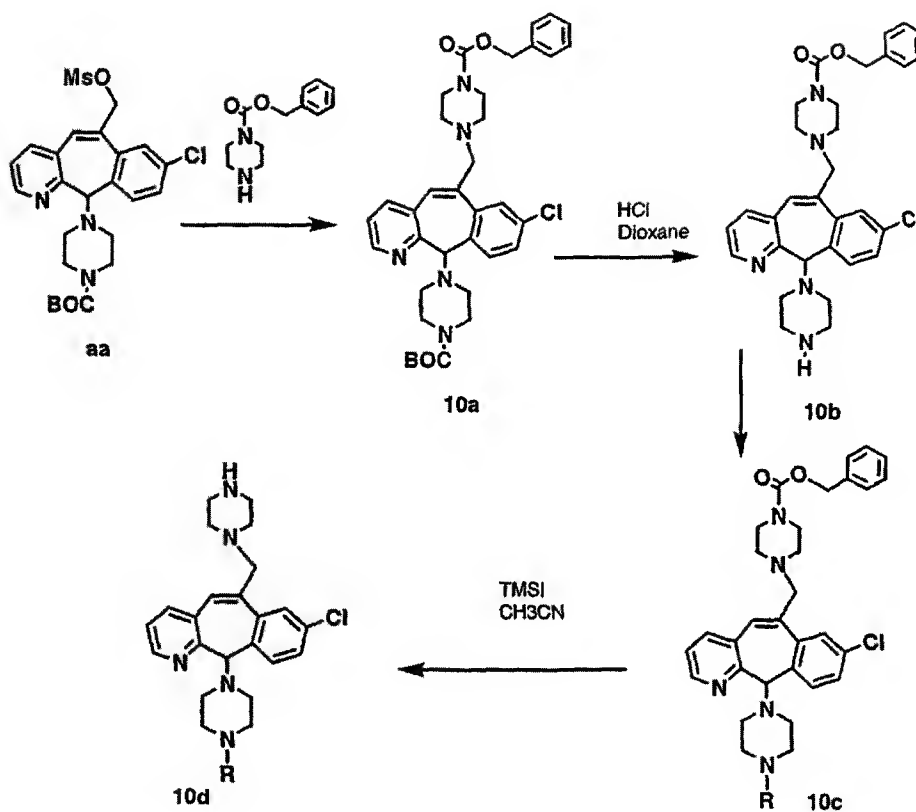

**Scheme 9: PREPARATION OF 5-SUBSTITUTED PROPANOIC ACID DERIVATIVES**

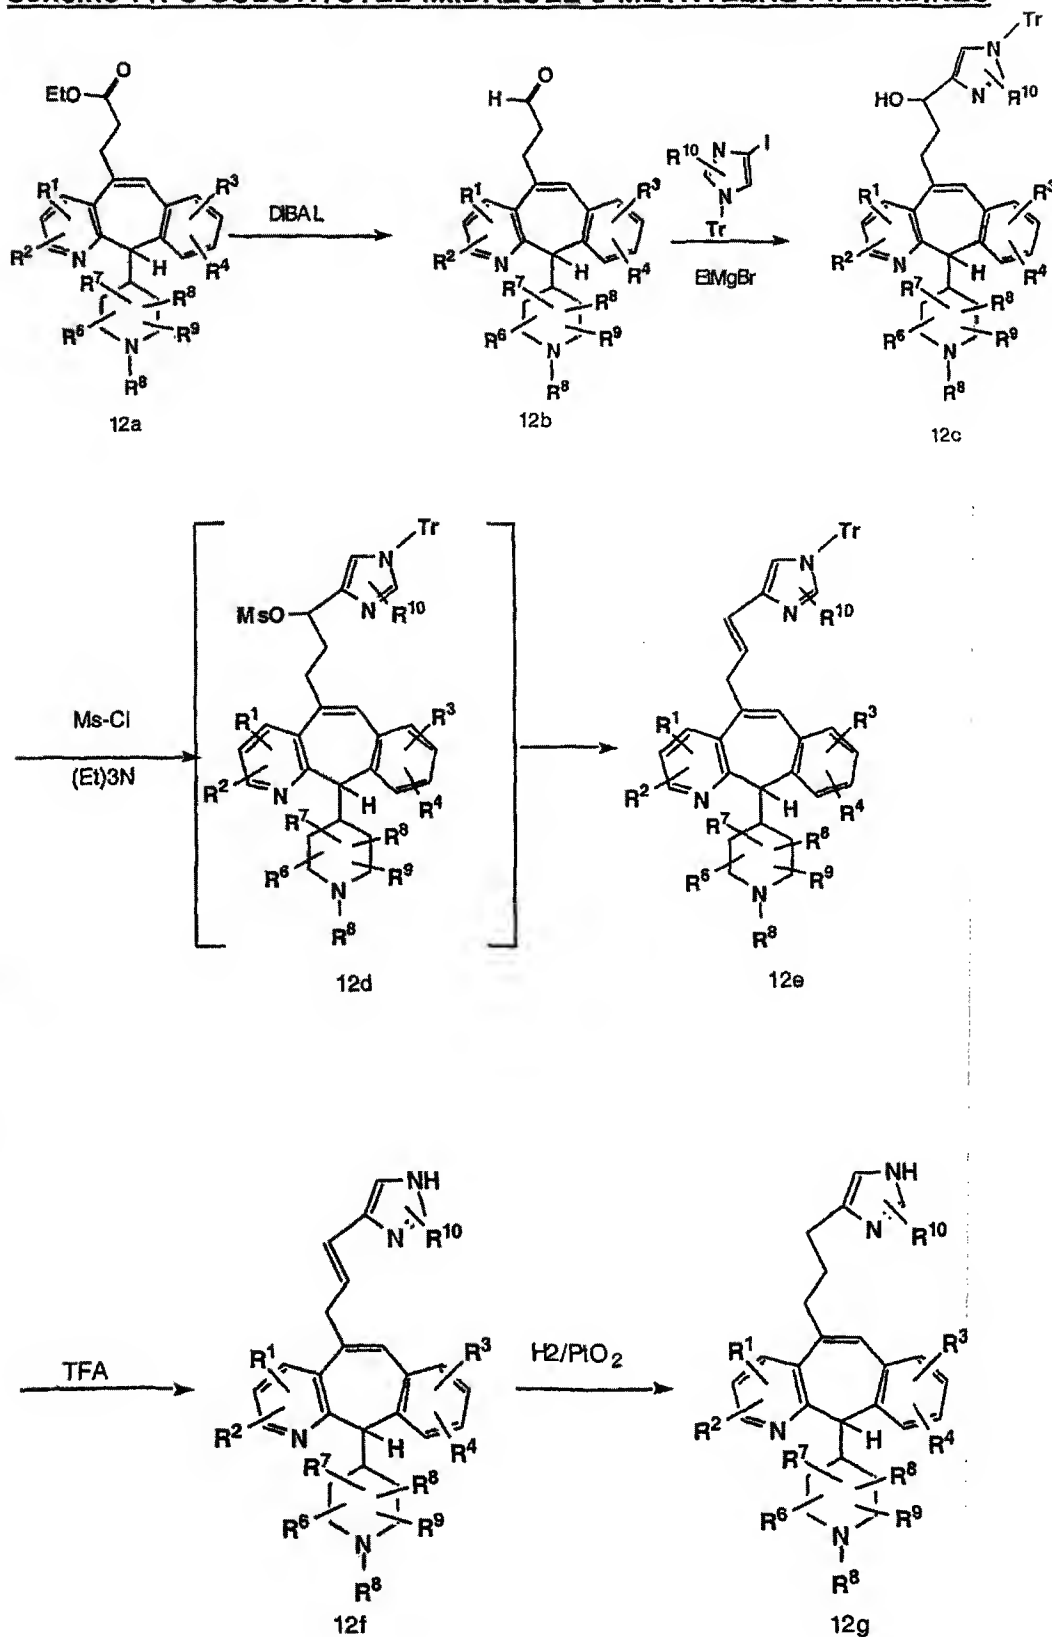

5

Amides from 3-carbon spaced carboxylic acid 9a and 9c can be prepared as outlined in scheme 10 using either DEC-HOBT mediated protocol or from the appropriate acid chloride.

10

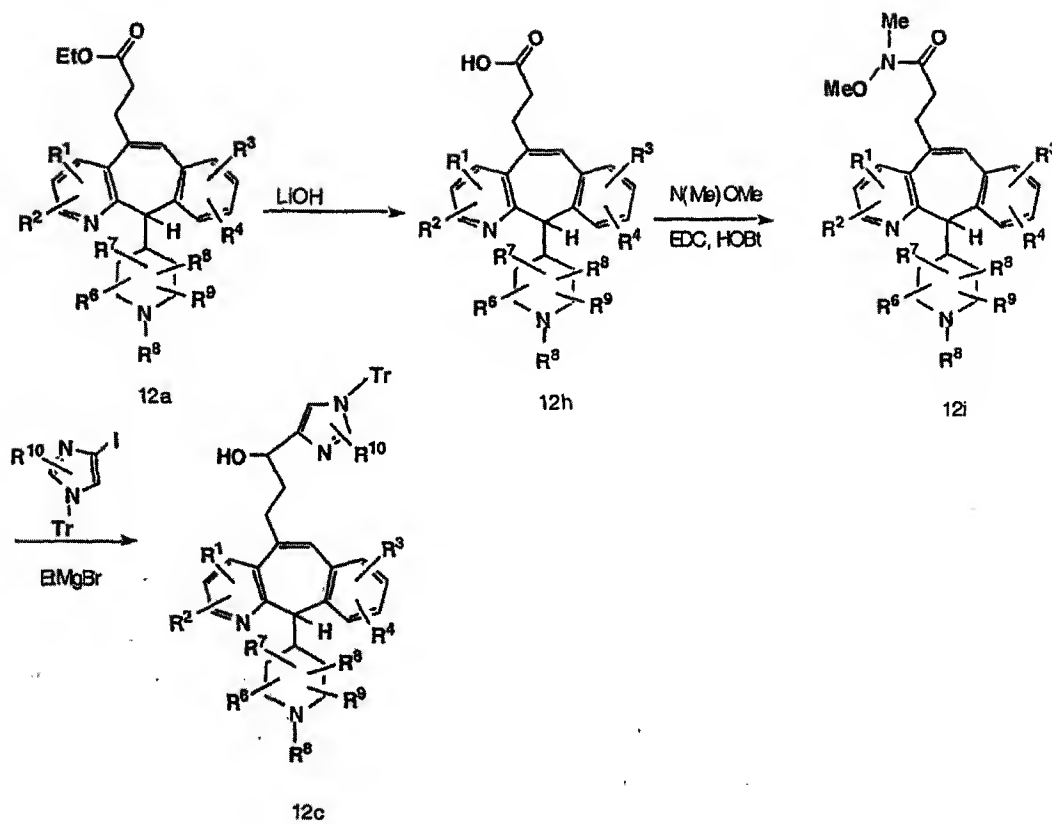

**Scheme 10:**

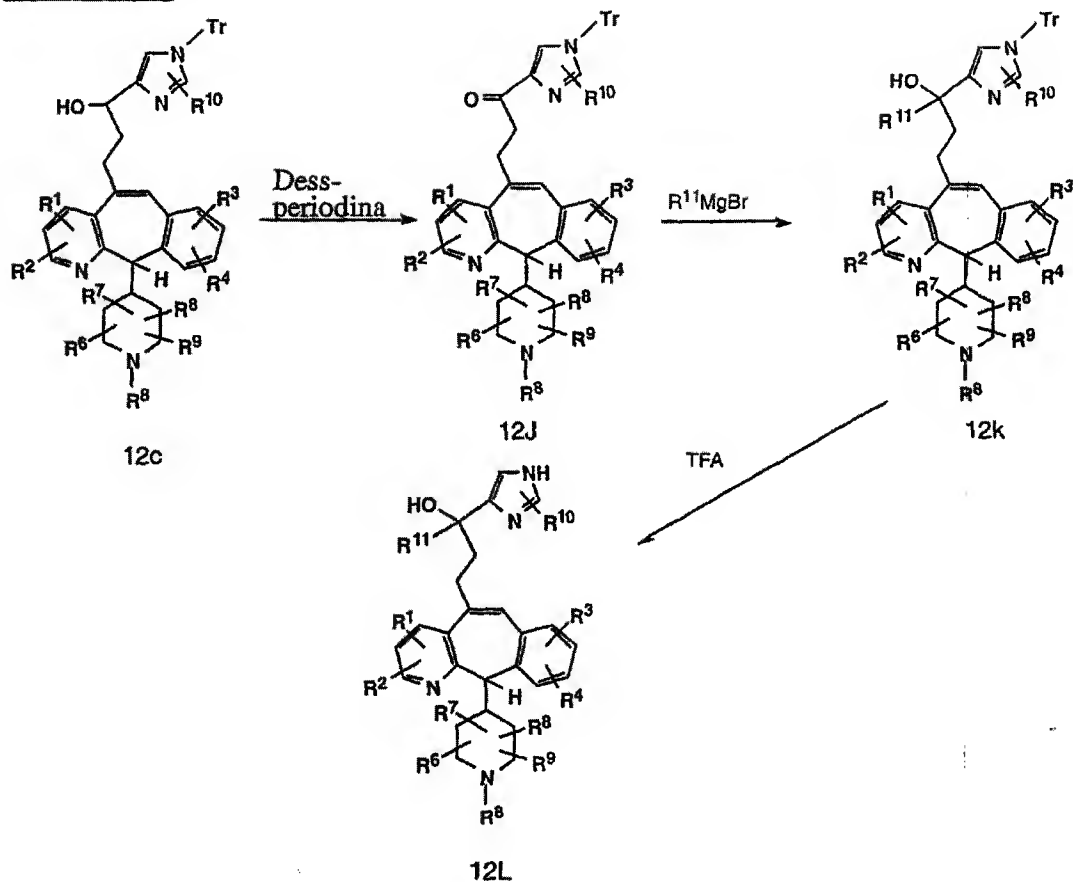

- Preparation of piperazine compounds off the bridgehead starts from mesylate  
5 aa which is reacted with CBZ-protected piperazine. The BOC group is then removed  
and the resulting amine **10c** is functionalized appropriately. Removal of CBZ group off  
the piperazine is effected with TMSI.

**Scheme 11: C-SUBSTITUTED IMIDAZOLE-3-METHYLENE-PIPERIDINES**

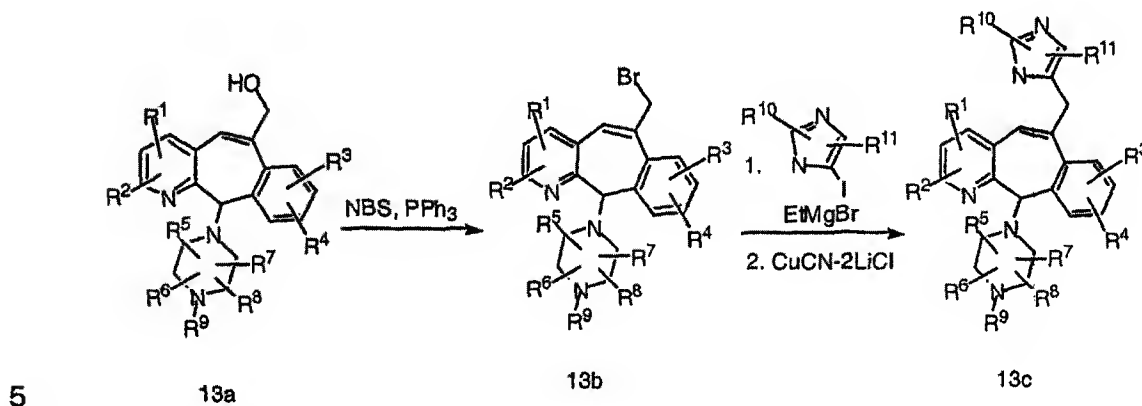

Compound 12a is reduced with DIBAL in an inert solvent such as toluene or tetrahydrofuran to give 12b after acidic workup. Treatment of 12b with an appropriately substituted and tritylated imidazole iodide in the presence of  
5 ethylmagnesium bromide in solvents such as dichloromethane at ambient temperature yields the adduct 12c. Elimination of the hydroxyl group by converting the hydroxyl group to an appropriate leaving group such as a mesylate, tosylate, or halide, using methanesulfonyl chloride, p-toluenesulfonyl chloride, or thionyl chloride, followed by  
10 elimination using an appropriate base such as triethylamine gives 12e. Removal of the trityl group with acid such as trifluoroacetic acid or hydrochloric acid gives the double bond compound 12f which is then hydrogenated using an appropriate catalyst such as platinum oxide under from 1 to 55 psi of hydrogen in an appropriate solvent such as ethanol gave the desired product 12g.

15 Alternatively the ester 12a can be saponified with an appropriate base such as lithium hydroxide to obtain the acid 12h. Converting the acid 12h to the "Weinreb amide" followed by reaction with an appropriately substituted and tritylated imidazole iodide in the presence of ethylmagnesium bromide in solvents such as dichloromethane at ambient temperature yields the adduct 12c (shown in Scheme 12  
20 below).

**Scheme 12:**

**Scheme 12a**

- 5 Compounds of type 12L were prepared as shown above. Oxidation of the hydroxyl compound 12c can be accomplished with the Dess Martin periodinane to obtain 12j. Reaction with a grignard reagent gave 12k. The trityl group is removed under standard conditions mentioned above to give the desired compound 12L.

**Scheme 13: C-Substituted Imidazole Single Methylene Bridgehead Compounds**

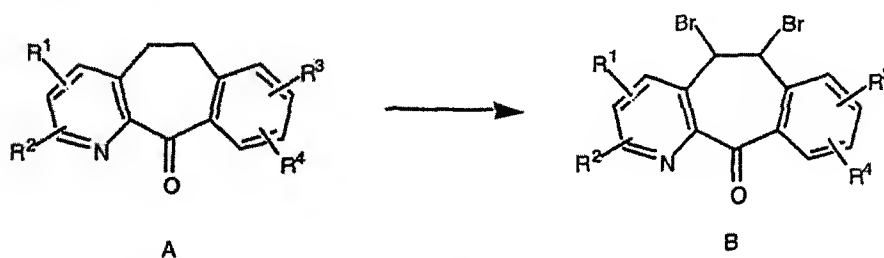

Single methylene bridgehead *C*-imidazole derivatives (13c) were prepared as shown above. Compound 13a was first converted to bromide 13b. Treatment of  
 10 compound 13b with *C*-imidazole cuprates (prepared from corresponding iodo imidazole) yielded the adduct 13c.

**Scheme 14: Preparation of one-methylene piperazines**

15

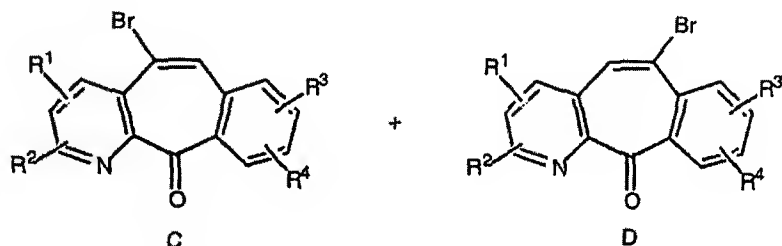

Ketone A is brominated with brominating reagents such as NBS, with a small amount of an activator such as benzoyl peroxide, in solvents such as dichloromethane at elevated temperature, such as 80-100° C to give dibromo compound B.

20

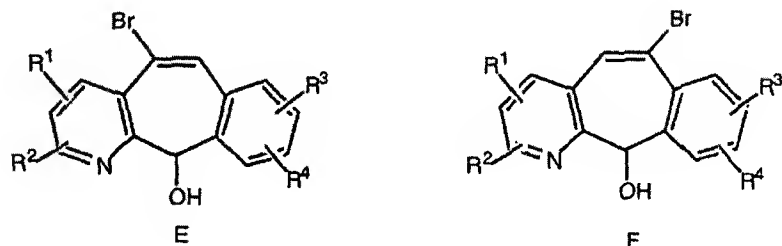

Dibromo compound B is reacted with a base such as DBU in a solvent such as dichloromethane at temperatures from 0°C to room temperature to give vinylbromides  
 25 C and D. These vinylbromides are separated by chromatography such as silica gel

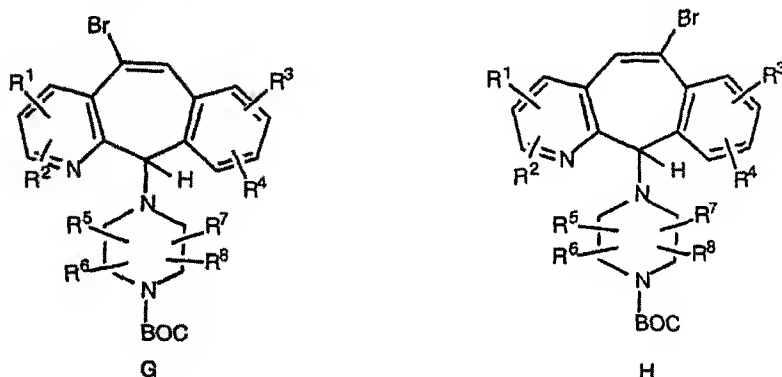

flash chromatography using solvents mixtures such as ethyl acetate and hexane. Alternatively, vinylbromides C and D can be separated by crystallization from solvents such as dichloromethane.

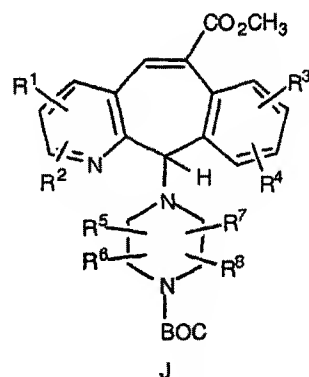

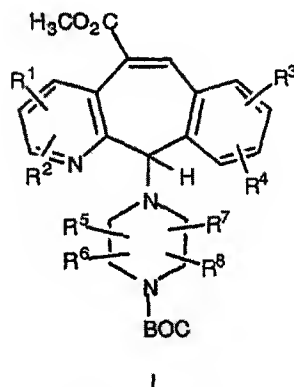

The ketone groups of separated vinylbromides C and D are reduced to the corresponding alcohols E and F with a reducing agent such as NaBH<sub>4</sub> in solvents such as methanol or ethanol at temperatures of 0°C to room temperature.

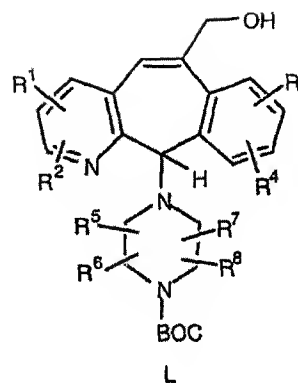

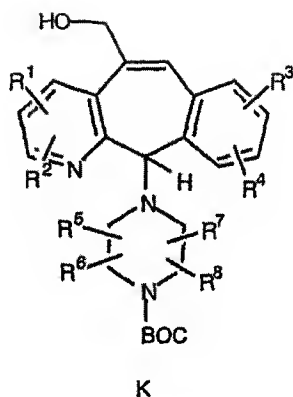

The resulting alcohols functions of E and F are converted to a leaving group, such as a halide, with reagents such as  $\text{SOCl}_2$  in solvents such as dichloromethane containing a base such as 2,6-lutidine and running the reaction at  $0^\circ\text{C}$  to room temperature. The resulting intermediate halides are reacted, without purification, with piperazine or a protected piperazine, such as BOC-piperazine in a solvent such as dichloromethane at room temperature giving Intermediates G and H.

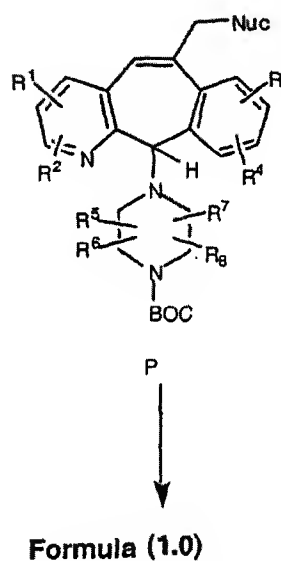

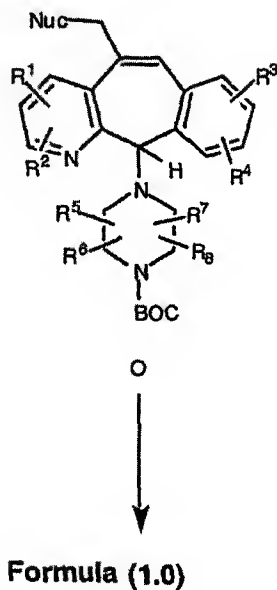

The vinylhalide intermediates are carbonylated with CO gas under a pressure of about 100 psi and a temperature of 80°C to 100°C using a palladium catalyst such as PdCl<sub>2</sub> and triphenyl phosphine in toluene and containing DBU and an alcohol such as methanol. If methanol is used, methyl esters I and J are obtained.

The ester functions of I and J are reduced to hydroxymethyl functions of K and L. This can be done directly by first removing the protecting BOC group with TFA or HCl-dioxane and then reducing with a reducing agent such as DIBAL-H, followed by reintroduction of the BOC group with di-tert-butyl dicarbonate. Alternatively, the ester function is hydrolyzed with LiOH and water followed by neutralization with citric acid. The resulting carboxylic acids are then converted into a function that is easily reduced, such as a mixed anhydride or an acyl imidazole. This is done by reacting the resulting carboxylic acids with a chloroformate to form the mixed anhydride or with carbonyldiimidazole to form the acyl imidazole (Synlett. (1995), 839). The resulting activated carboxylic acids are reduced with NaBH<sub>4</sub> in solvents such as methanol, ethanol or aqueous THF.

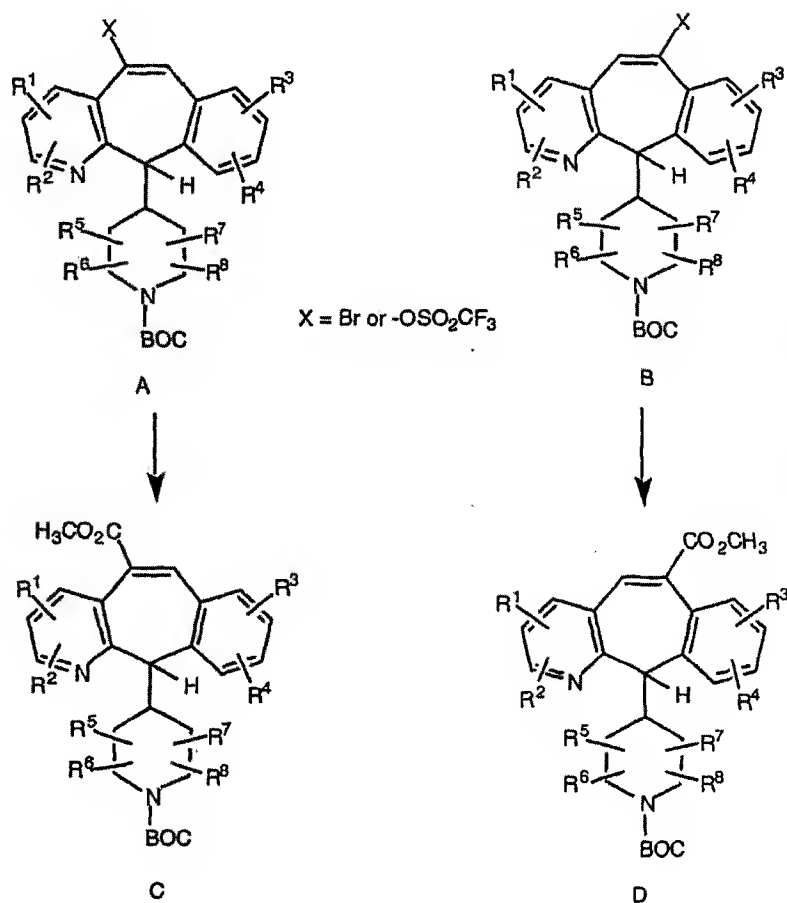

The hydroxy functions of K and L are converted into leaving groups such as a methanesulfonate or an arylsulfonate such as a tosylate, by reacting with the appropriate sulfonyl chloride in dichloromethane containing a base such as triethylamine. The sulfonate leaving groups can be displaced by nucleophiles such as amines. The nucleophile can also be basic heterocycles such as imidazole or a substituted imidazole. In the case of an imidazole, the anion of the imidazole is first formed with NaH in DMF and then reacted with the above sulfonate. Displacement of the sulfonates with a nucleophile gives O and P, which can be converted to the compounds of this invention 1.0, by first removing the BOC protecting group and then forming the desired amide, urea, carbamate or sulfonamide on the resulting amine by methods well known in the art.

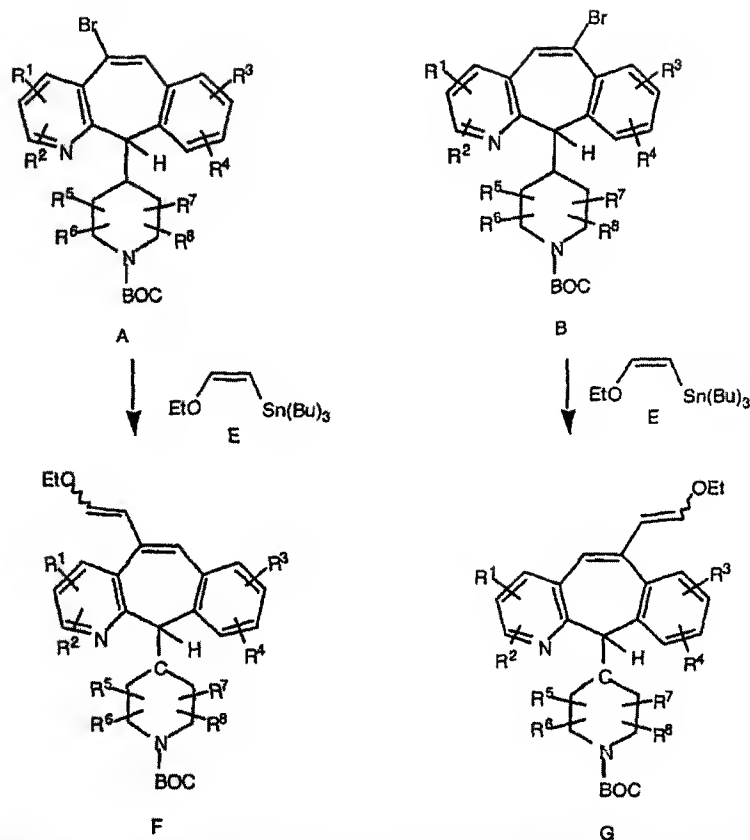

**Scheme 15: Preparation of one-methylene piperidenes**

5

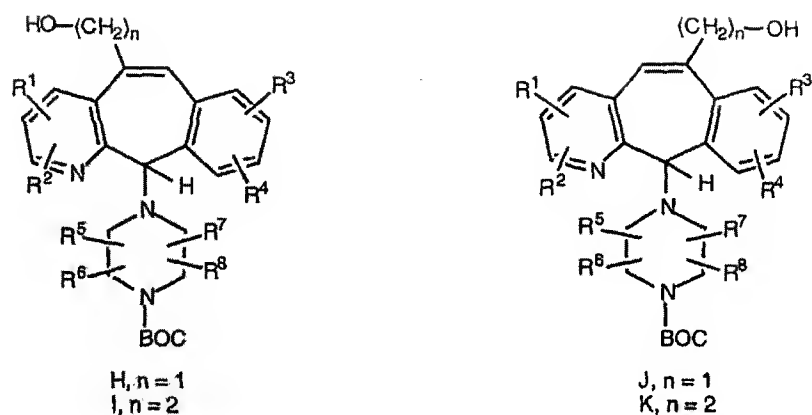

10           The vinylhalide or vinyltriflate intermediates A and B, (described in other general schemes) are carbonylated with CO gas under a pressure of about 100 psi and a temperature of 80°C to 100°C using a palladium catalyst such as PdCl<sub>2</sub> and triphenyl phosphine in toluene and containing DBU and an alcohol such as methanol. If methanol is used, methyl esters C and D are obtained. Intermediates C and D are

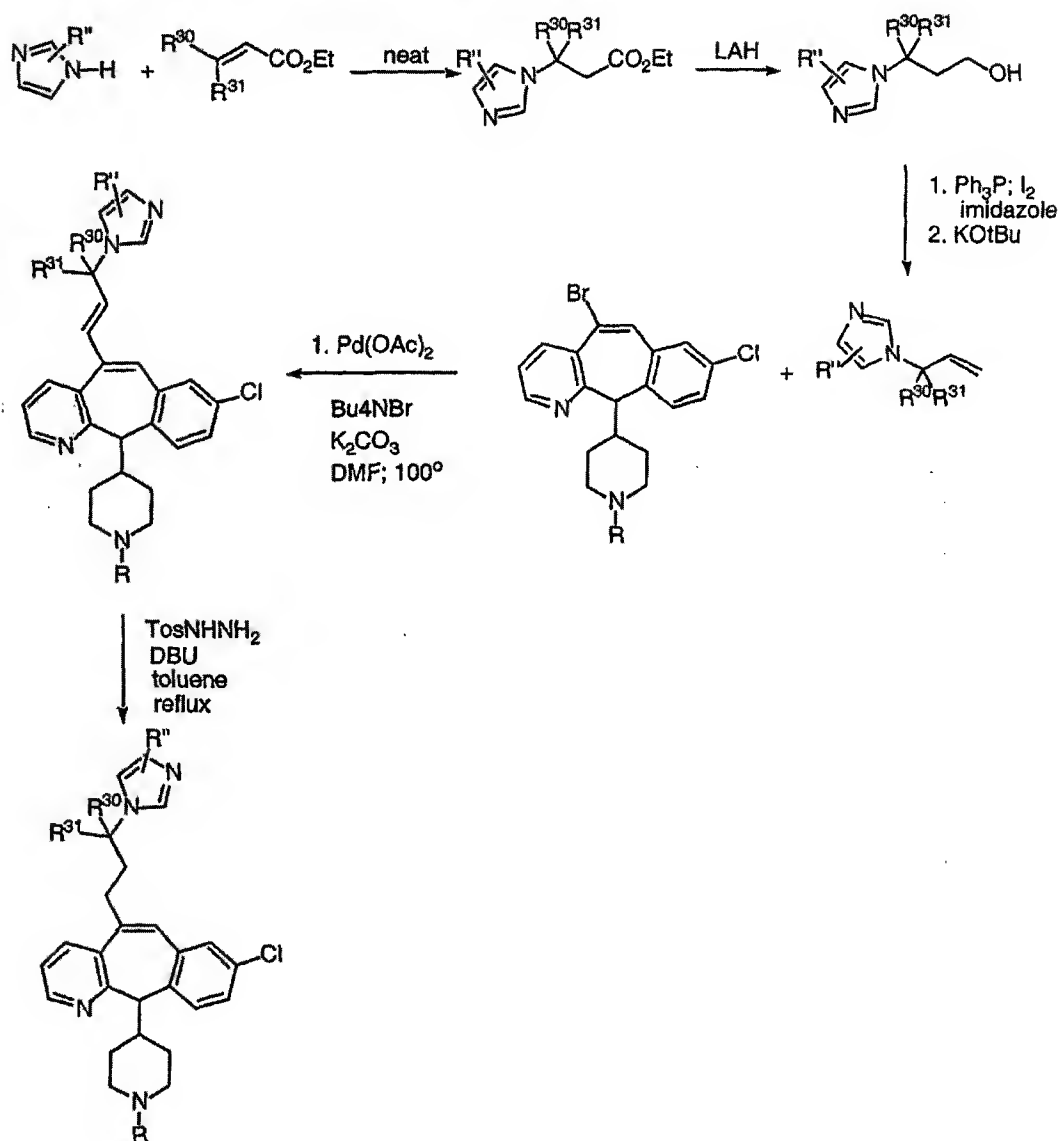

15           reacted as are intermediates I and J in the general scheme for one methylene piperazines to yield compounds of Formula 1.0, of this invention.

**Scheme 15a:**

Alternatively, Intermediates A and B can be reacted with tin vinyl ether E, in the presence of PdCl<sub>2</sub>, as described in Tetrahedron, (1991), 47, 1877, to yield vinyl ethers F and G (Scheme 15a). Allowing F and G to stand until aldehyde is visible by NMR (at least two weeks) and then reacting with Hg(OAc)<sub>2</sub>, KI followed by NaBH<sub>4</sub>, as described in J. Chem. Soc., Perkin Trans., (1984), 1069 and Tet. Lett., (1988), 6331, yields mixtures H, I and J, K. Intermediates H and J are separated and reacted as are intermediates K and L in the general scheme for one methylene piperazines to yield compounds of Formula 1.0, of this invention.

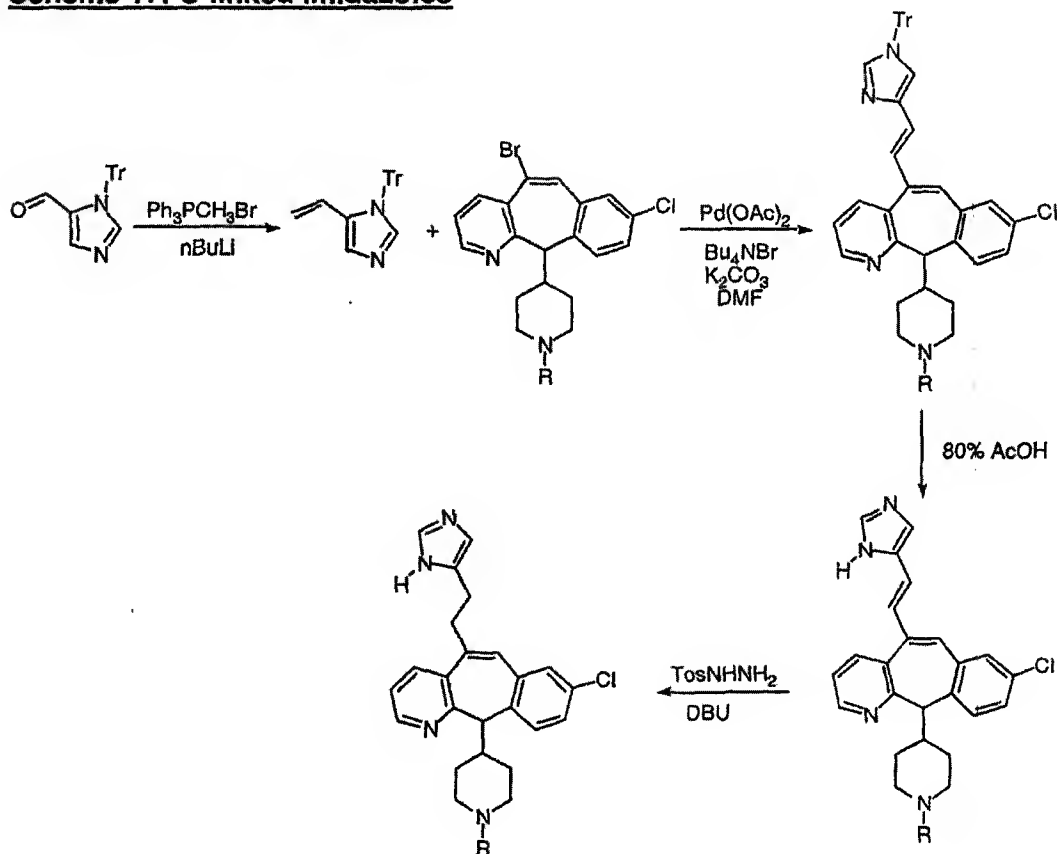

**Scheme 16: Branching on the methylene chain**

Compounds with substitution along the chain can be synthesized starting with a substituted ethyl acrylate derivative. Addition of imidazole across the olefin followed by reduction gives the terminal alkene, which can be added to the appropriately substituted vinyl bromide under Heck reaction conditions. Selective reduction of the di-substituted olefin gives the saturated derivative (Scheme 16).

**Scheme 17: C-linked imidazoles**

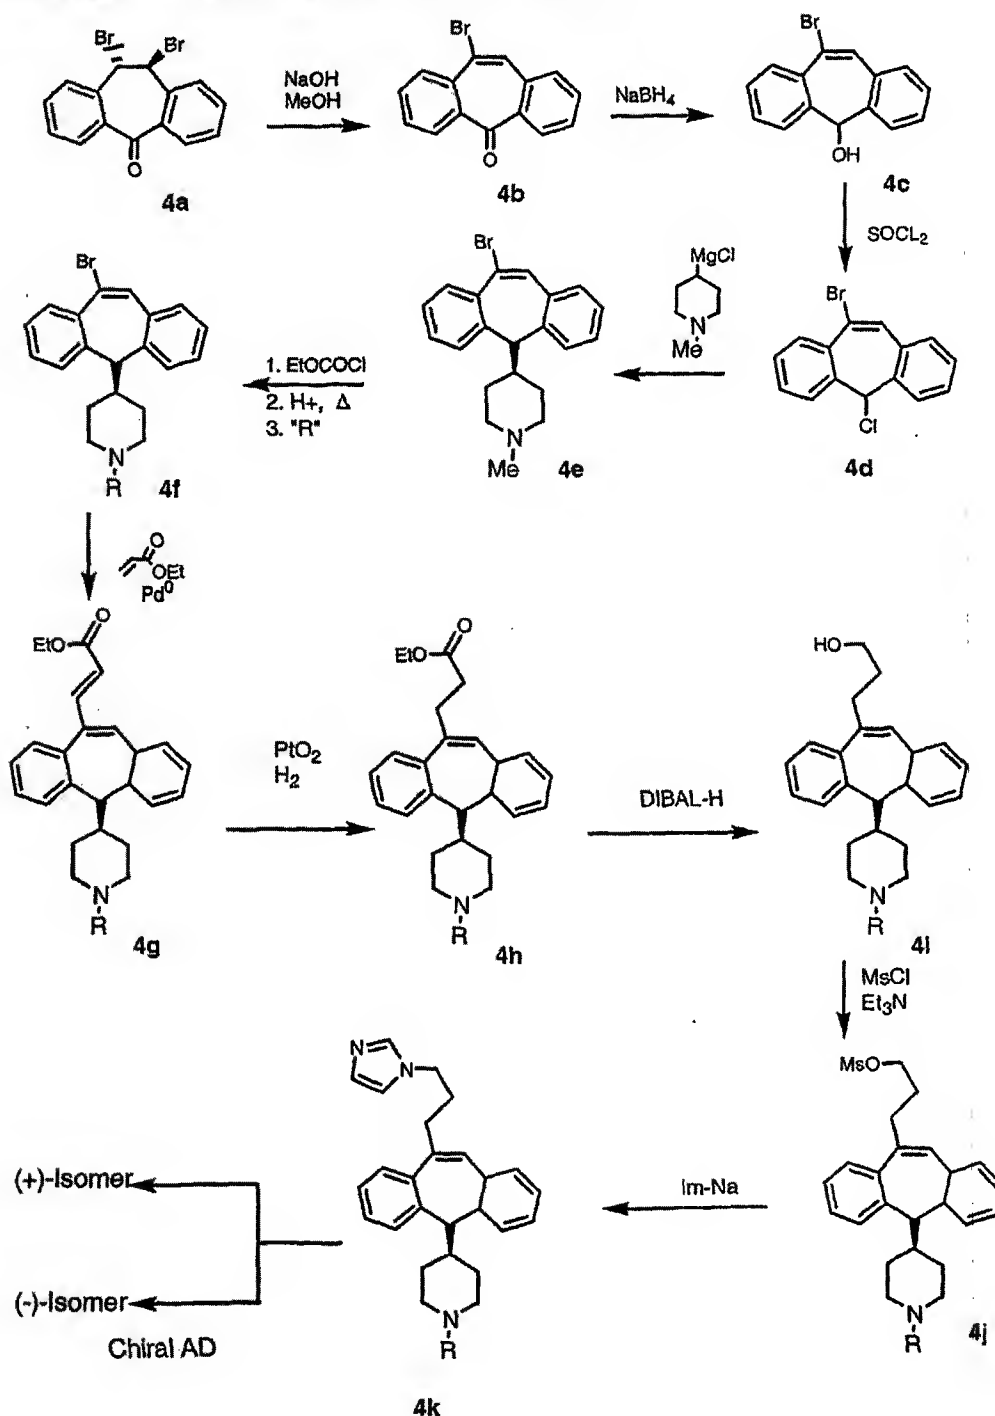

The synthesis of the C-linked imidazoles proceeds through the Heck reaction of the appropriately substituted vinyl imidazole with the appropriate vinyl bromide. Selective reduction of the resulting di-substituted olefin gives the target compound. A similar procedure can be carried out with differentially N-substituted imidazoles to give N-alkyl imidazole derivatives (Scheme 17).

### Suberyl Compounds

One skilled in the art will appreciate that the compounds of the invention represented by Formula 1.0, wherein a, b, c or d is C can be prepared according to the following schemes:

#### 5 Scheme 18: Preparation of suberyl analogues

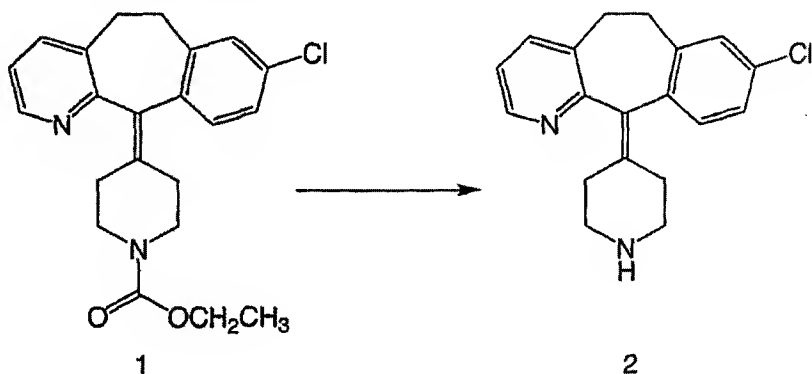

Tricyclic vinyl bromide azaketone 4b was prepared as described by Rupard et. al. (*J. Med. Chem.* **1989**, 32, 2261-2268). Reduction of ketone to alcohol 4c was carried out with NaBH<sub>4</sub>. The alcohol was converted to chloride 4d and then treated with N-methylpiperidine Grignard reagent to give piperidine derivative 4e. Demethylation was effected with ethyl chloroformate followed by acid hydrolysis and subsequent derivitization (i.e sulfonylation, acylation and carbomylation etc.). Preparation of compounds with 3-carbon substituted imidazole moieties on the suberane tricyclic bridgehead was carried out in a similar way as described in scheme 3.

### Preparation of Intermediates and Examples

#### PREPARATIVE EXAMPLE 1

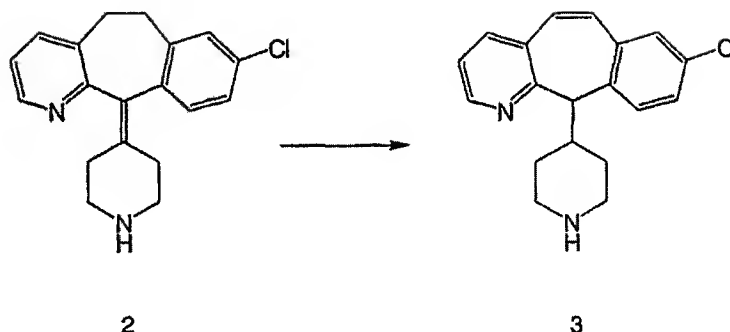

##### Step A Preparation of Compound (2).

Loratadine<sup>®</sup> (448 g, 1.17 mol) was refluxed in 2 L of 70% aqueous HCl (1.4 L conc.HCl in 600 ml H<sub>2</sub>O) for 12h. The reaction mixture was then cooled and poured into ice. It was then basified with 950 mL of 50% NaOH followed by extraction with CH<sub>2</sub>Cl<sub>2</sub> (1 x 4L, and 2 x 2.5L). The organic phase was washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub> and MgSO<sub>4</sub> and then filtered. All the volatiles were then removed to give 368 g of the title compound (2). MH<sup>+</sup> = 311

## Step B

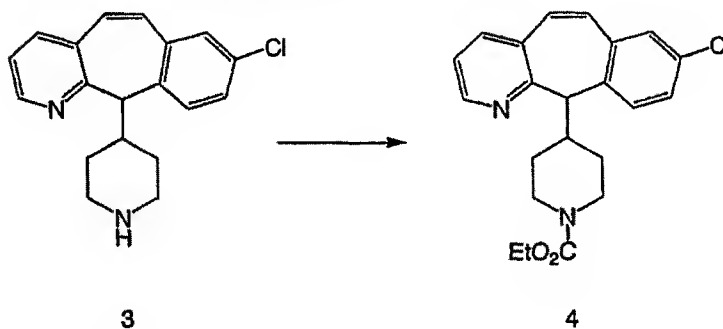

## Preparation of Compound (3).

5

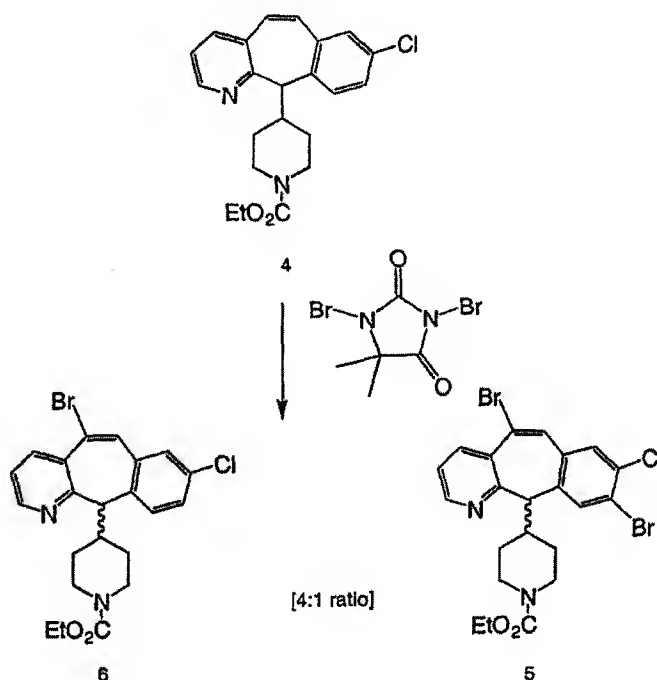

To the title compound from Preparative Example 1, Step A (363 g, 1.17 mol) was added trifluoromethane sulfonic acid ( 1.8 Kg) under N<sub>2</sub>. The reaction mixture was refluxed at 170°C. The progress of the reaction was monitored by <sup>1</sup>H NMR. After 4 days the reaction was only 63% complete. After 8 days the reaction was found to be 80% complete according to <sup>1</sup>H NMR; thus another 130 mL of CF<sub>3</sub>SO<sub>3</sub>H were added and refluxing continued for another 24h. It was then poured into ice and basified with 800 mL of NaOH (50%) and extracted twice with CH<sub>2</sub>Cl<sub>2</sub> ( 1 X 8L then 1 X 7L). The organic phase was combined, washed with H<sub>2</sub>O and filtered through celite. It was then dried over MgSO<sub>4</sub> and Na<sub>2</sub>SO<sub>4</sub> and again filtered through celite. The filtrate was concentrated to give a black brown semi-solid that was pre adsorbed on 600 g of silica gel and then chromatographed on 2.3 Kg of silica gel eluting first with 5% CH<sub>3</sub>OH-CH<sub>2</sub>Cl<sub>2</sub> (saturated with ammonia) and then with 10% CH<sub>3</sub>OH-CH<sub>2</sub>Cl<sub>2</sub> (saturated with ammonia) to give 102 g of the title compound (3) as a solid. mp = 73-75; MS (FAB) m/z 483 (MH<sup>+</sup>).

20

Step CPreparation of Compound (4).

To a solution of the title compound of Preparative Example 1, Step B (145 g) in 1L of  $\text{CH}_2\text{Cl}_2$  at  $0^\circ\text{C}$  was added ethylchloroformate (55 mL), dropwise. The reaction mixture was stirred at room temperature overnight. It was further diluted with 1L  $\text{CH}_2\text{Cl}_2$  and stirred with 2L of dilute  $\text{NaHCO}_3$ , pH ~ 7-8. The organic layer was  
5 separated and dried over  $\text{MgSO}_4$  and  $\text{Na}_2\text{SO}_4$ , filtered and concentrated to afford 174 g of a brown black gum. The crude compound was purified by silica gel column chromatography, eluting with 20-60% ethyl acetate-hexane to afford the title compound (4). MS (FAB)  $m/z$  383 ( $\text{MH}^+$ ).

10 D. Preparation of compounds (6) and (5).

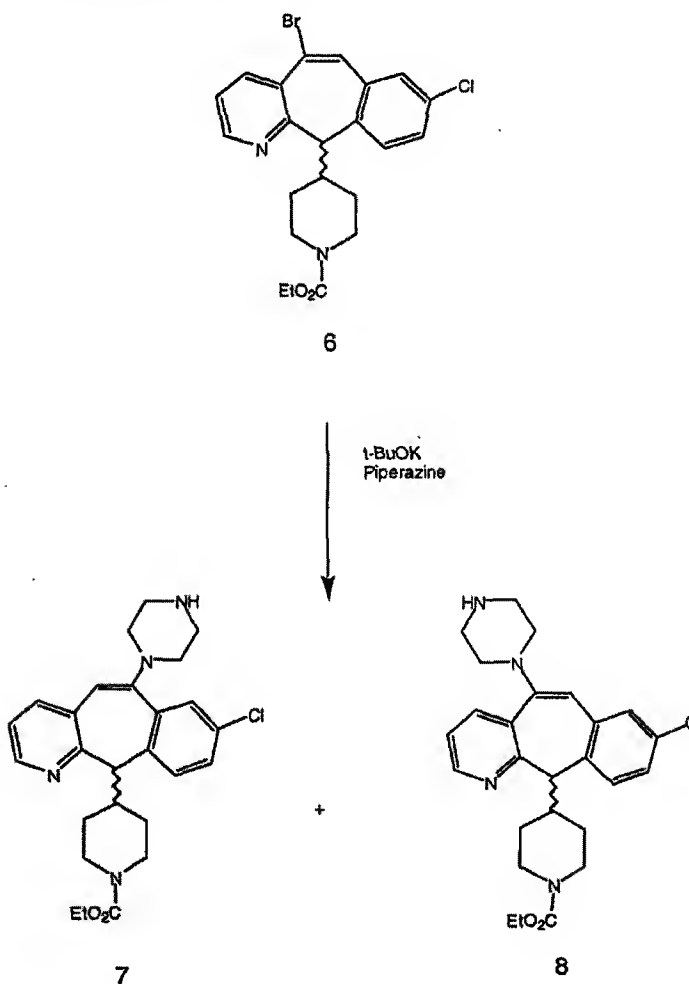

15

The title compound of Preparative Example 1, Step C (251 g, 0.65 mol) was dissolved in 1.65 L of  $\text{CH}_2\text{Cl}_2$  and dibromo dimethylhydantoin, (132 g, 0.462 mol) was then added. The solution was stirred until the system was homogeneous. The solution was cooled to  $0^\circ\text{C}$  under  $\text{N}_2$  atmosphere and 174 mL of  $\text{CF}_3\text{SO}_3\text{H}$  were  
20 added over 37 min. while keeping temperatures between  $-1$  to  $1^\circ\text{C}$ . The reaction

mixture was stirred for 3 h, cooled to  $-10^{\circ}\text{C}$  and basified with 50% NaOH (170 mL), keeping the temperature below  $1^{\circ}\text{C}$ . The aqueous phase was extracted with  $\text{CH}_2\text{Cl}_2$  and then dried over  $\text{MgSO}_4$ , dried and concentrated to give 354 g of yellow foam that was chromatographed on silica gel eluting with 10-50% of ethyl acetate-hexanes gradient to give 50 g of compound (5) (14% yield) and 147 grams of the desired title compound (6) (49% yield). Compound (6) MS  $m/z$  (rel intens) 462 ( $\text{MH}^+$ ); Compound (5) MS  $m/z$  (rel intens) 542 ( $\text{MH}^+$ ).

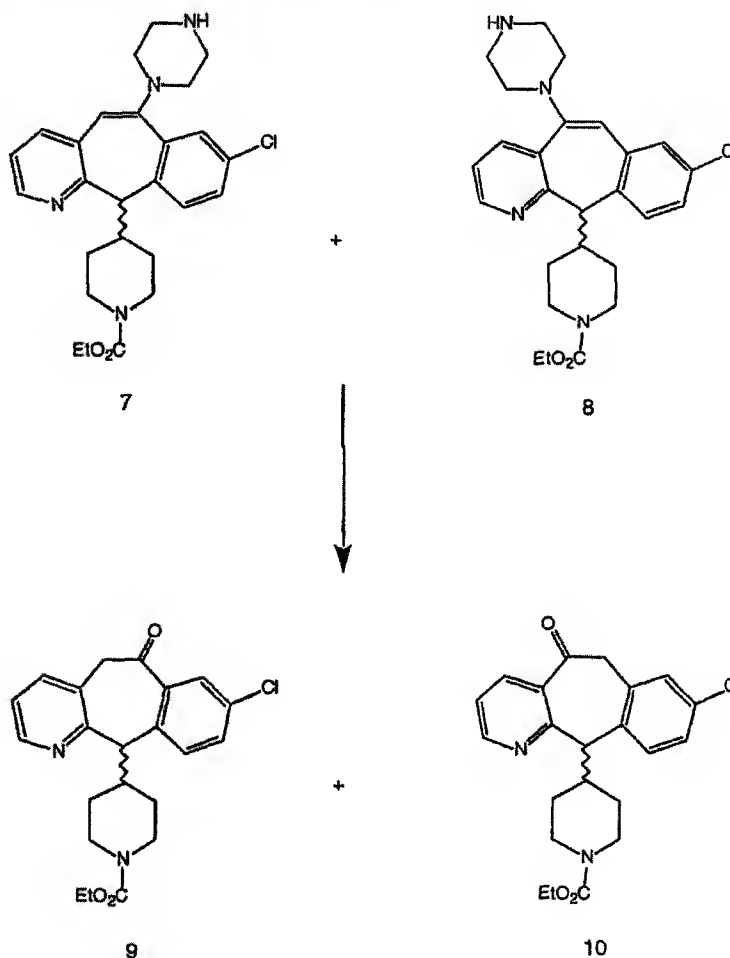

E. Mixture of compounds (7) and (8).

10

To a solution of piperazine 0.186 g (2.2 mmol, 5 equiv.) in 5 mL of THF was added 0.20 g (0.4 mmol) of compound 6 (from Preparative Example 1, Step D). The reactants stirred at room temperature until everything was in solution. To this mixture was added potassium t-butoxide (0.243 g, 2.1 mmol, 5 equivalents) in one portion. The reaction mixture was stirred at room temperature for 2 h. All of the THF was removed by rotary evaporation and the resulting crude product was purified by flash chromatography eluting with 3-4% (10% CH<sub>3</sub>OH: saturated with NH<sub>4</sub>OH)-CH<sub>2</sub>Cl<sub>2</sub> to give a mixture of title compounds (7) and (8). FAB m/z 467 (MH<sup>+</sup>).

10 F. Mixture of compounds (9) and (10).

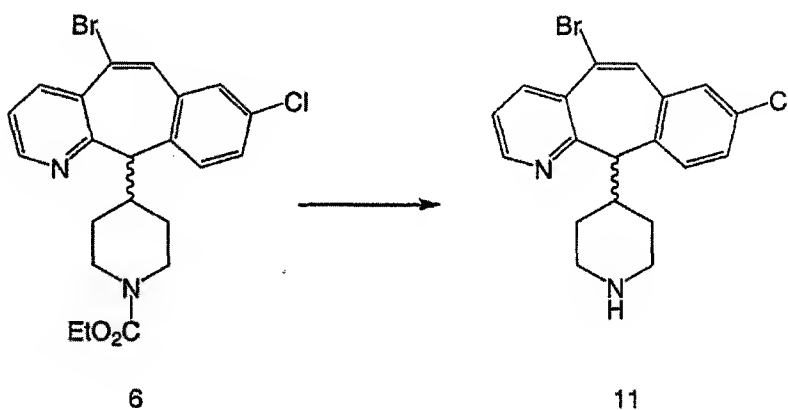

15 The mixture of compounds from Preparative Example 1, Step E (43.6 g) in 100 mL of conc. HCl was stirred at room temperature for 16 h. The reaction mixture was

poured into ice and basified with conc.  $\text{NH}_4\text{OH}$  and then extracted with  $\text{CH}_2\text{Cl}_2$  to give a mixture of compounds (9) and (10). MS (FAB)  $m/z$  399 ( $\text{MH}^+$ ).

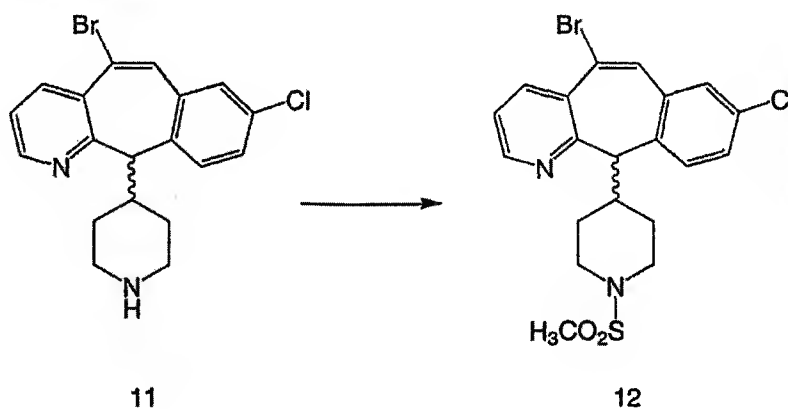

PREPARATIVE EXAMPLE 2

5 A. Compound (11).

10 Compound 6 from Preparative Example 1, Step D (10 g, 21.7 mmol) was hydrolyzed in the same manner as described in Preparative Example 1, Step A, to give the title compound (11).  $\text{MH}^+ = 389$ .

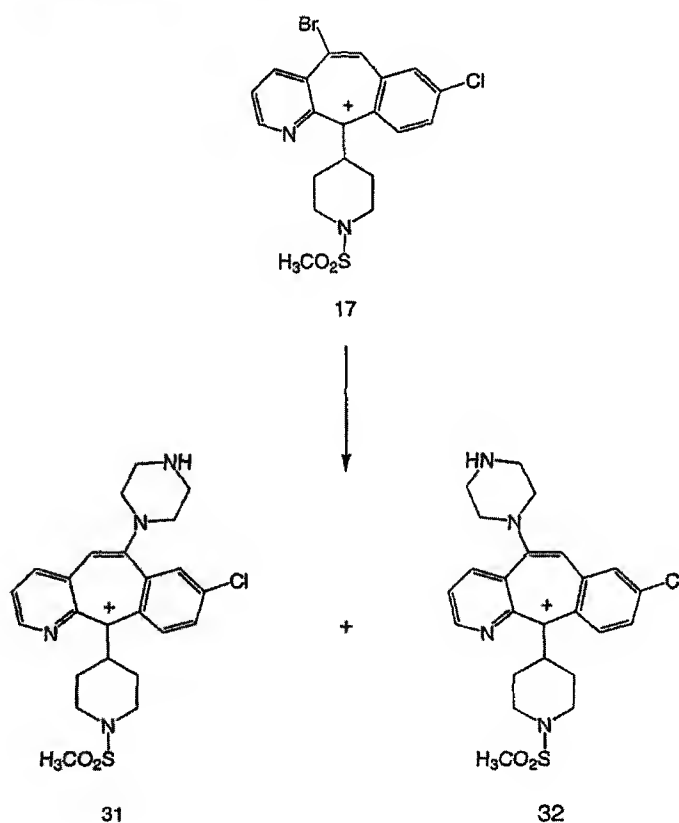

15 B. Compound (12).

To the amine product from Preparative Example 2, Step A (20 g, 0.5 mol) and  
20 triethylamine (10.4 g, 14.4 mL, 1.02 mol) dissolved in anhydrous dichloromethane (100 mL) was added methanesulfonyl chloride (8.8 g, 6mL, 0.77 mol). After stirring at

room temperature overnight, the solution was diluted with dichloromethane, washed with saturated  $\text{NaHCO}_3$  and dried over anhydrous magnesium sulfate. Filtration and concentration *in vacuo* afforded the crude product that was purified by flash chromatography on a silica gel column, eluting with 1%  $\text{CH}_3\text{OH}$ (saturated with ammonia)- $\text{CH}_2\text{Cl}_2$  to give the title compound (12). MS (FAB)  $m/z$  469 ( $\text{MH}^+$ ).

Step C      Preparation of Compounds (13) and (14).

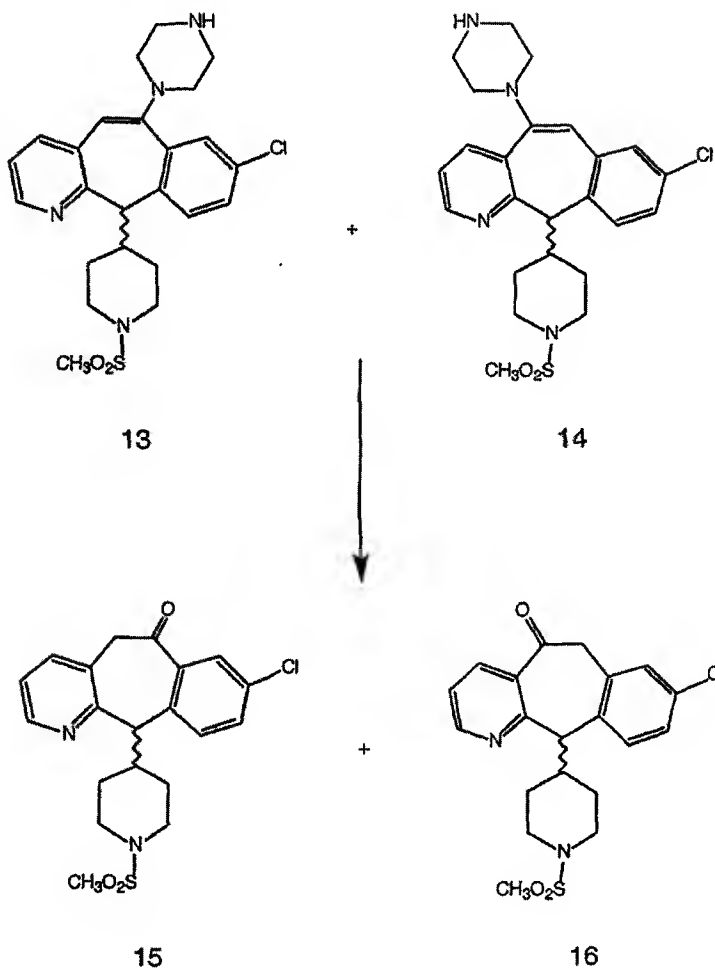

10

Product from Preparative Example 2, Step B (21.25 g, 45.3 mmol) was treated in the same manner as described in Preparative Example 1, Step E, to give 22.2 g of a mixture of compounds (13) and (14). MS (473) ( $\text{MH}^+$ ).

15

75

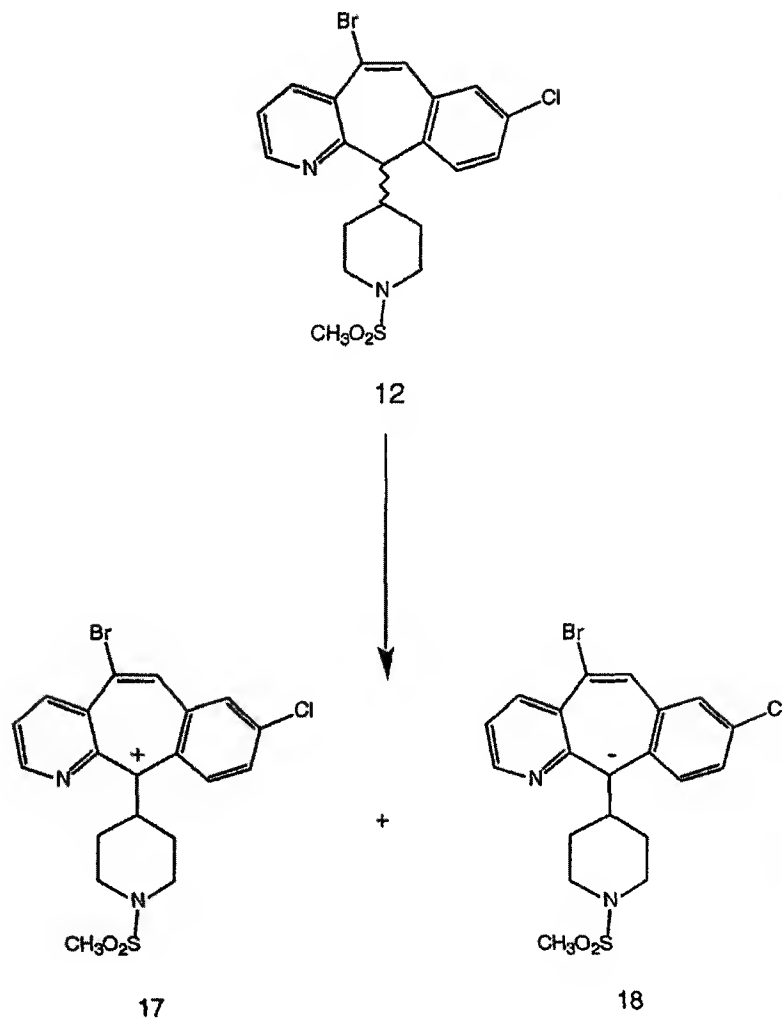

D. Preparation of compounds (15) and (16).

5

The product from Preparative Example 2, Step C (22.5 g) was dissolved in 150 mL of conc. HCl and stirred for 16 h. The reaction mixture was poured into ice, basified with conc. NH<sub>4</sub>OH and then extracted with CH<sub>2</sub>Cl<sub>2</sub> to give a mixture of

10 compounds (15) and (16). MS (FAB)  $m/z$  405 (MH<sup>+</sup>).

76

E. Preparation of compounds (17) and (18).

5

Separation of compound of Preparative Example 2 Step B by HPLC using a Chiralpack AD column eluting with 40-50% isopropanol:60-50% hexane-0.2% diethylamine gave enantiomeric amines (17) and (18).

10

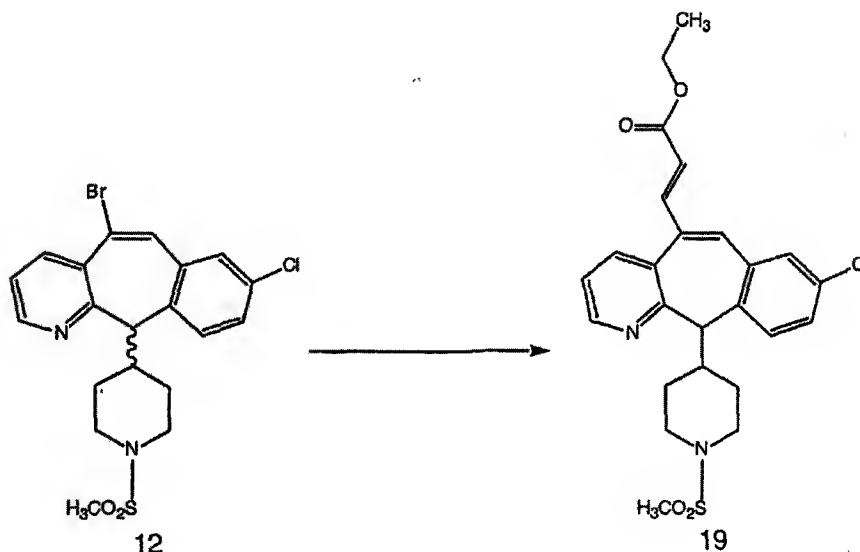

Compound 17: mp = 118-119;  $[\alpha]_D^{22} = +136.9^\circ$  (9.00 mg/2mL, MeOH); MS (FAB) m/z 469 (MH<sup>+</sup>).

15

Compound 18: mp = 119-120;  $[\alpha]_D^{22} = -178.2^\circ$  (9.90 mg/2mL, MeOH); MS (FAB) m/z 469 (MH<sup>+</sup>).

PREPARATIVE EXAMPLE 3A. Compound (19).

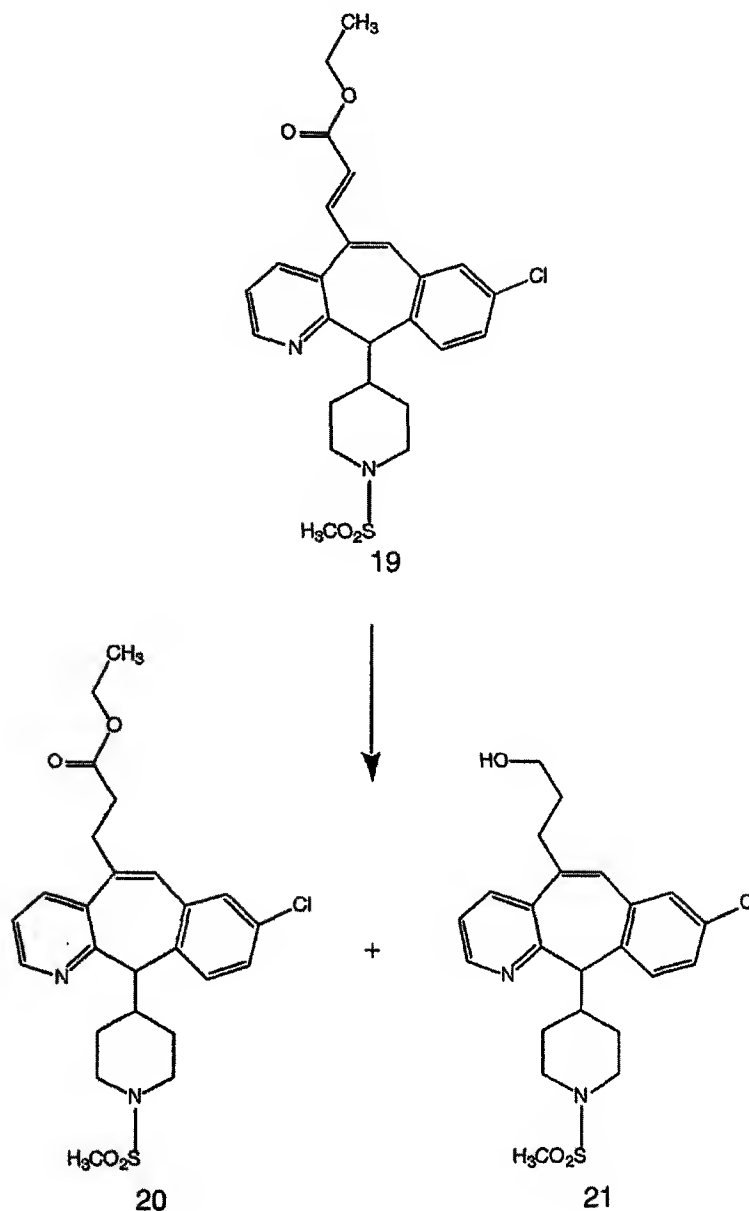

5

10 To a solution of the title compound from Preparative Example 2, Step B (2.0 g, 4.3 mmole) in DMF (50 ml) under nitrogen atmosphere, was added triethyl amine (17 ml), ethyl acrylate (2.5 ml), potassium carbonate (3 g, 21.4 mmole), tetrabutylammonium bromide (2.8 g, 8.6 mmole) and palladium (II) acetate (0.1255 g, 0.56 mmol). The resulting mixture was heated to 100°C, and stirred for 4 h then it was

15 cooled to room temperature and the solvent was removed. To the residue was added CH<sub>2</sub>Cl<sub>2</sub> and water and the mixture was then extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was dried over magnesium sulfate, filtered and concentrated to dryness. The crude product was purified using pre-adsorbed flash silica column chromatography eluting with 30-50% ethyl acetate-hexane gradient to give the title compound (19). MS 487

20 (MH<sup>+</sup>).

Step B      Mixture of Compounds (20) and (21).

5

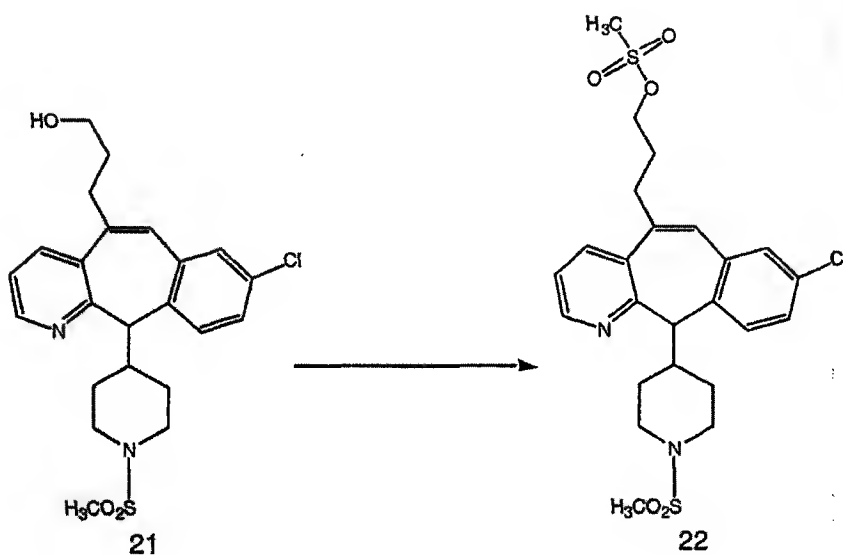

To a solution of the title compound from Preparative Example 3, Step A (6.4 g, 13 mmole) in ethanol (500 ml), was added copper chloride (0.96 g, 9.7 mmole). The reaction was cooled to 0°C. Portionwise, added sodium borohydride (4.97 g, 131 mmole). The reaction stirred overnight at room temperature. Another portion of sodium borohydride (2.46 g, 65 mmole) was added and the reaction stirred for 2 more hours, then the solvent was removed. To the residue was added saturated sodium

10

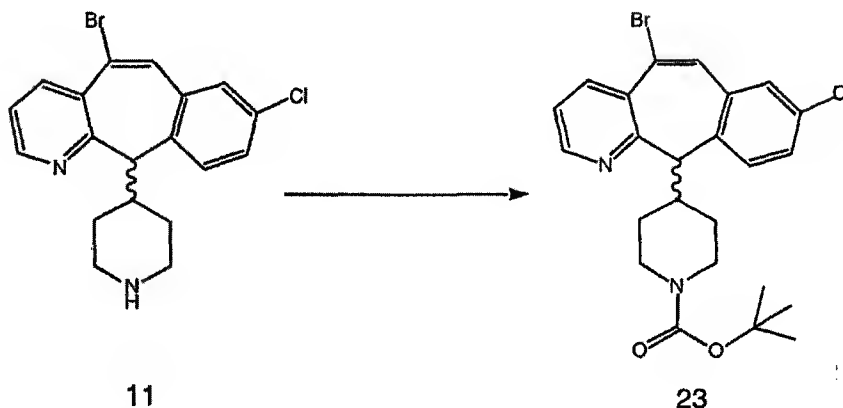

bicarbonate and the mixture was extracted with  $\text{CH}_2\text{Cl}_2$ . The organic layer was dried over sodium sulfate, filtered and concentrated to dryness to afford a mixture of the

reduced ester (20) and the alcohol (21) title compounds. This crude mixture was  
5 taken on to the next step without purification.

Step C      Preparation of Compound (22).

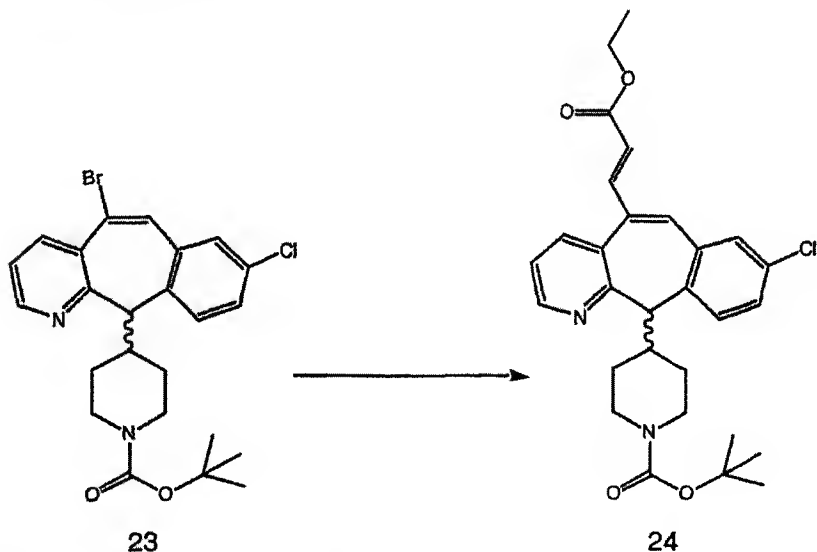

15 To a solution of the products from Preparative Example 3, Step B (5.74 g) in  $\text{CH}_2\text{Cl}_2$  (100 ml) was added triethyl amine (2.4 ml). Slowly, methane sulfonyl chloride (0.8 ml) was added and the mixture stirred over night at room temperature. To the reaction was added saturated sodium bicarbonate and then it was extracted with  $\text{CH}_2\text{Cl}_2$ . The organic layer was dried over magnesium sulfate, filtered and  
20 concentrated to dryness. The crude product mixture was separated on a Biotage® column, eluting with 30% ethyl acetate- $\text{CH}_2\text{Cl}_2$ , to afford the desired title compound (22). MS 525 ( $\text{MH}^+$ ). (recovered unreacted ester (20))

PREPARATIVE EXAMPLE 4A. Compound (23).

5

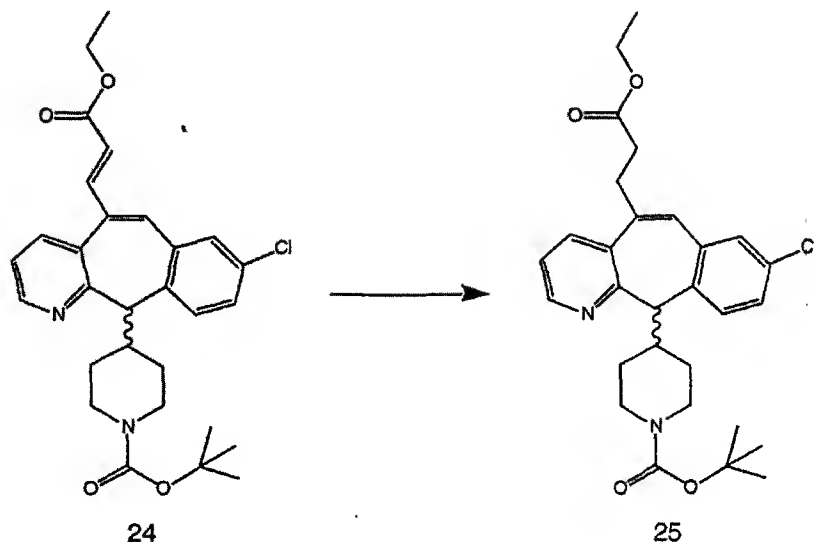

To a solution of title compound (11) from Preparative Example 2, Step A (20 g, 51.32 mmole) in  $\text{CH}_3\text{OH}/\text{H}_2\text{O}$  (400 ml, 50:1) was added di-tert-butyl dicarbonate (16.8 g, 77.0 mmole). The pH was adjusted to 9 and the mixture was stirred for 4 h. The solvent was removed, then water was added. The mixture was extracted with  $\text{CH}_2\text{Cl}_2$ .

10 The organic layer was dried over magnesium sulfate, filtered and concentrated to dryness affording the title compound (23). MS 491 ( $\text{MH}^+$ ).

B. Compound (24).

15

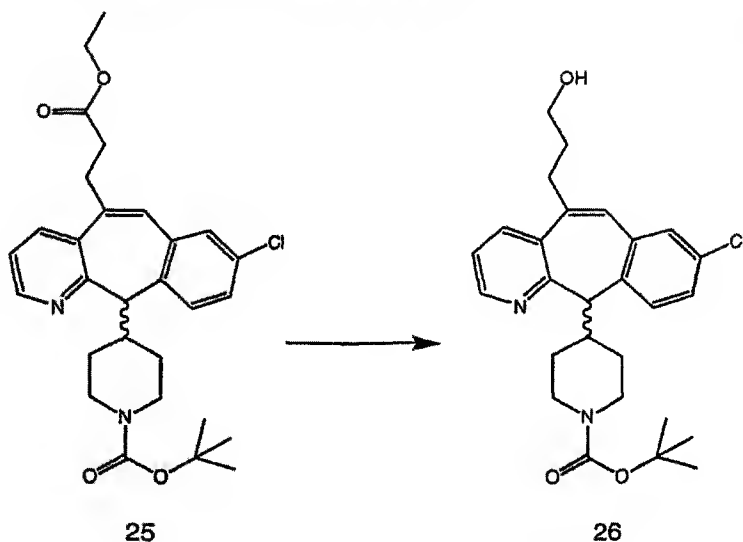

Following a similar procedure as in Preparative Example 3, Step A, the title compound (24) was prepared. MS 509 ( $\text{MH}^+$ ).

C. Compound (25).

5

To a solution of the title compound from Preparative Example 3, Step B (19.62 g, 38.5 mmole) in ethanol (150 ml) was added platinum (IV) oxide (1.962 g). The reaction stirred over night at room temperature under H<sub>2</sub> balloon pressure atmosphere. After monitoring the reaction, an additional 2% (by weight) of platinum (IV) oxide was added and the reaction stirred for 6 more hours, under H<sub>2</sub> balloon pressure atmosphere. The mixture was filtered through celite and concentrated to dryness to afford the title compound (25) as a white solid. MS 511 (MH<sup>+</sup>).

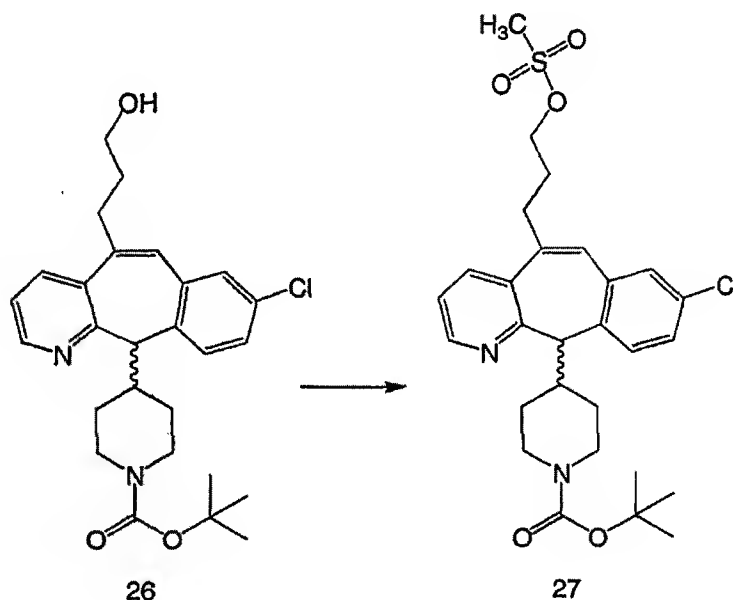

10

Step D      Preparation of Compound (26).

15

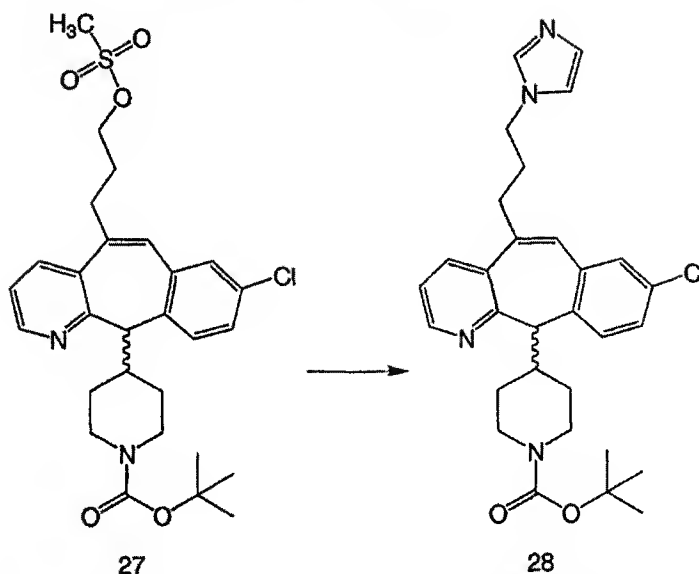

Dissolved product from Preparative Example 3, Step C (2.0 g, 3.9 mmole) in THF (30 ml) and cooled to 0°C in an ice bath. To the reaction was added diisobutylaluminum hydride (7.8 ml, 7.8 mmole). The reaction was allowed to stir and come to room temperature over night. The reaction did not go to completion. The mixture was cooled in an ice bath (0°C) and fresh diisobutylaluminum hydride/toluene (7.8 ml) was added. After the reaction stirred for 4 more hours, it was still not complete. The reaction mixture was cooled to 0°C, and an additional 3.9 ml of diisobutylaluminum hydride as added. The reaction stirred for 3 more hours. The crude reaction mixture was then extracted with ethyl acetate:10% citric acid, and 1.0 N NaOH. The organic layer was dried over magnesium sulfate, filtered and concentrated to dryness to afford the desired title compound (26). MS 471 (MH<sup>+</sup>).

Step E      Preparation of Compound (27).

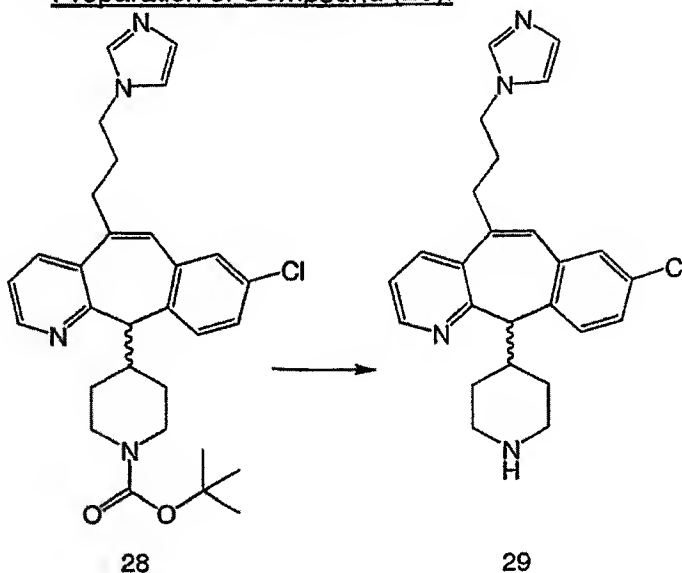

Following a similar procedure described in Preparative Example 3, Step C, the title compound (27) was prepared. MS 549 (MH<sup>+</sup>).

Step F      Preparation of Compound (28).

- 5      To a solution of the title compound from Preparative Example 4, Step E (1.6 g, 3.01 mmole) in DMF (50 ml) was added imidazolylsodium (Aldrich) (0.407 g, 4.52 mmole). The reaction mixture was heated to 90°C for 2 h. The reaction was cooled and the DMF was removed. Saturated sodium bicarbonate was added and the mixture was extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was dried over magnesium sulfate, filtered and concentrated to dryness. The crude product was purified by column chromatography eluting with 2% CH<sub>3</sub>OH: saturated with ammonia-CH<sub>2</sub>Cl<sub>2</sub>, to afford the title compound (28). MS 519 (MH<sup>+</sup>).
- 10

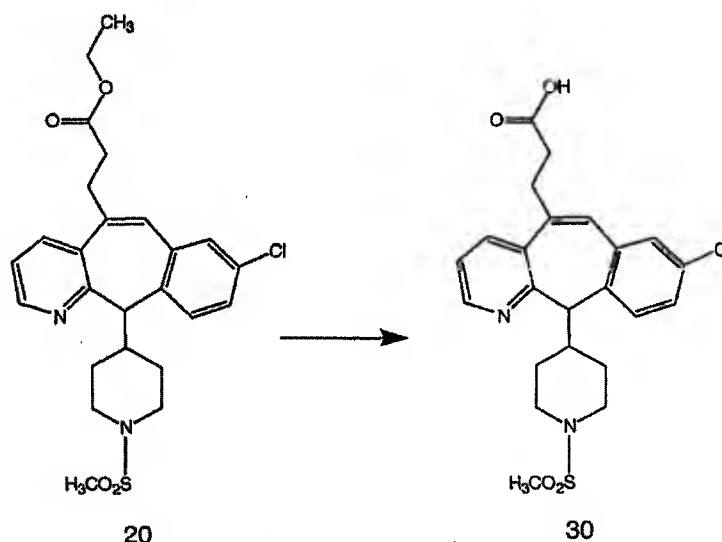

Step G      Preparation of Compound (29).

Dissolved the product from Preparative Example 4, Step F (0.55 g, 1.08 mmole) in 4 N dioxane/HCl (20 ml). The reaction mixture was stirred for 3 h at room temperature and then concentrated to dryness to afford the title compound (29) as a light yellow solid. HRMS 419 (MH<sup>+</sup>).

#### PREPARATIVE EXAMPLE 5

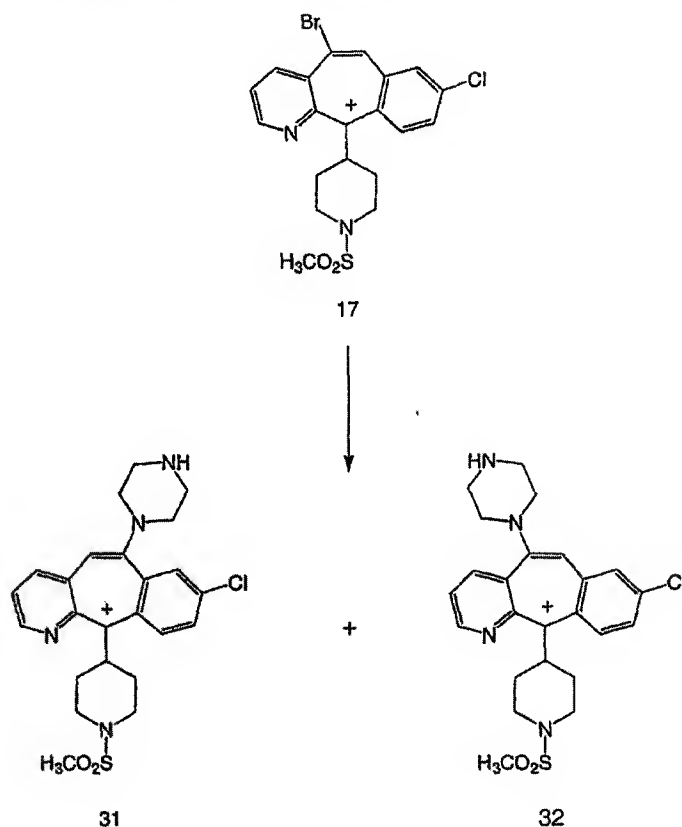

##### A. Compound (30).

Compound (20) from Preparative Example 3, Step B (0.67 g, 1.37 mmole) was dissolved in THF (5 ml). To the mixture was added 1N NaOH (6.9 ml) and the resulting solution stirred over night at room temperature. The reaction mixture was concentrated, acidified with 10% citric acid (w/v) and extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was dried over magnesium sulfate, filtered and concentrated to dryness to afford the title compound (30) as a yellow solid. mp 122.7-123.4°C; MS 461 (MH<sup>+</sup>).

15

85

EXAMPLE 1Preparation of compounds (31) and (32).

5

Compound (17) from Preparative Example 2, Step E 0.31 g (0.66 mmol) was treated in the same manner as described in Preparative Example 1, Step E to give a mixture of compounds (31) and (32) that were further separated on a HPLC Chiralpack AD column eluting with 30% isopropanol-70% hexane-0.2% diethylamine to give 0.04 g of target compound (31) and 0.07 g of target compound (32).

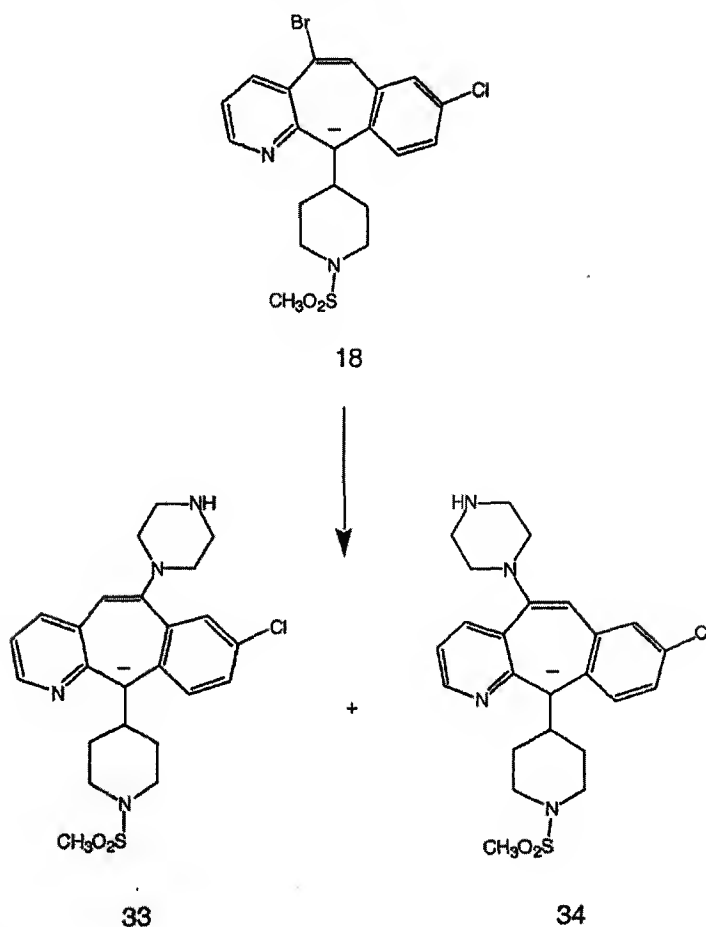

10

Compound 31: mp = 174-175;  $[\alpha]_D^{22} = +96.0^\circ$  (3.6 mg/2mL, CH<sub>2</sub>Cl<sub>2</sub>); MS (FAB) m/z 473 (MH<sup>+</sup>).

Compound 32: mp = 173-174;  $[\alpha]_D^{22} = +21.7^\circ$  (8.4 mg/2mL, CH<sub>2</sub>Cl<sub>2</sub>); MS (FAB) m/z 473 (MH<sup>+</sup>).

15

86

EXAMPLE 2Preparation of Compounds (33) and (34).

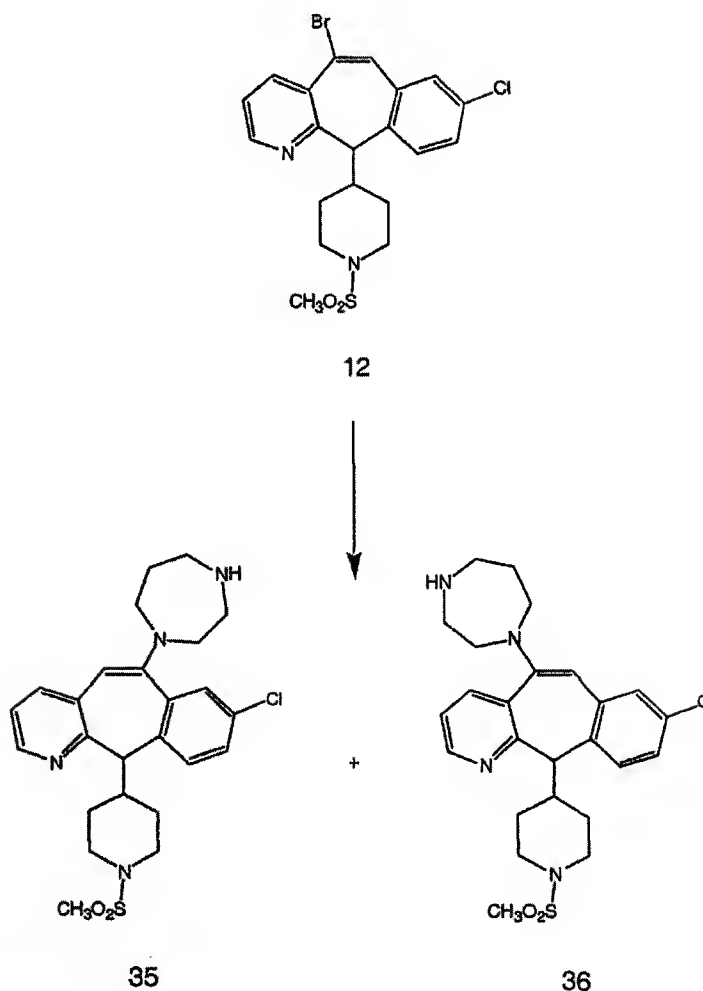

5

As described for preparation of Example 1 above, 0.31 g of compound (18) from Preparative Example 2 Step E was converted to a mixture of compounds (33) and (34) that were subsequently separated on a Chiralpack AD column HPLC eluting with and 30% isopropanol-70% hexane-0.2% diethylamine as eluent to give 0.12 g of target compound (33) and 0.04 g of target compound (34).

Compound 33: mp = 178-179;  $[\alpha]_D^{22} = -30.5^\circ$  (9.5 mg/2mL, CH<sub>2</sub>Cl<sub>2</sub>); MS (FAB) m/z 473 (MH<sup>+</sup>).

Compound 34: mp = 172-173;  $[\alpha]_D^{22} = -84^\circ$  (3.5 mg/2mL, CH<sub>2</sub>Cl<sub>2</sub>); MS (FAB) m/z 473 (MH<sup>+</sup>).

15

**EXAMPLE 3****Preparation of Compounds (35) and (36).**

5

35

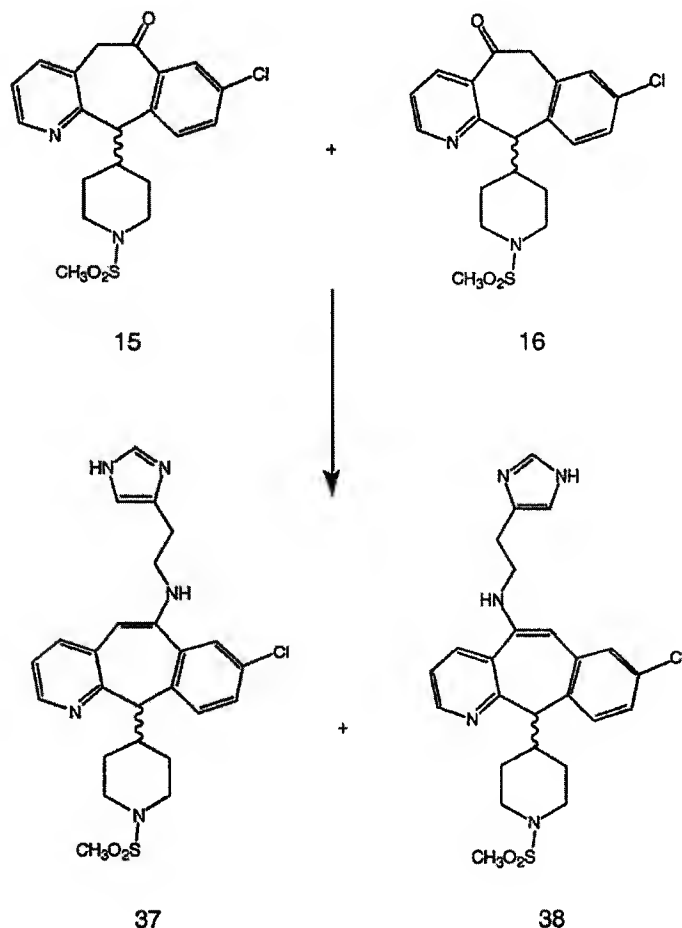

36

Product from Preparative Example 2, Step B (0.4 g, 0.86 mmol) was treated in the same manner as described in Preparative Example 1 Step E, substituting  
10 homopiperazine (Aldrich), to give of a mixture of compounds 35 and 36 that were further separated by flash chromatography, eluting with 10% CH<sub>3</sub>OH:saturated with NH<sub>3</sub>/CH<sub>2</sub>Cl<sub>2</sub> as eluent to give 0.13 g of target compound (35) and 0.17 g of target compound (36).

Compound (35): mp = 116-117; MS (FAB) m/z 487 (MH<sup>+</sup>).  
15 Compound (36): mp = 111-112; MS (FAB) m/z 487 (MH<sup>+</sup>).

EXAMPLE 4Preparation of Compounds (37) and (38).

5

- 10 The ketones of Preparative Example 2, Step D (0.50 g, 1.23 mmol),  
Histamine® (0.21 g, 1.8 mmol) and p-toluene sulfonic acid (monohydrate) were  
dissolved in anhydrous toluene (40 mL) and refluxed in a Dean Stark trap apparatus  
for 24 h. The reaction mixture was then cooled, diluted with ethyl acetate and  
extracted with NaHCO<sub>3</sub>. The organic layer was then dried over MgSO<sub>4</sub> and  
15 concentrated to dryness. Purification by flash chromatography on silica gel, eluting  
with 3% CH<sub>3</sub>OH(saturated with NH<sub>3</sub>)-CH<sub>2</sub>Cl<sub>2</sub>, afforded 0.17 g (28% yield) 5-  
substituted histamine adduct (38) as the first eluting product and 0.08 g (13% yield) of  
the 6-substituted histamine adduct (37) as the second eluting product.

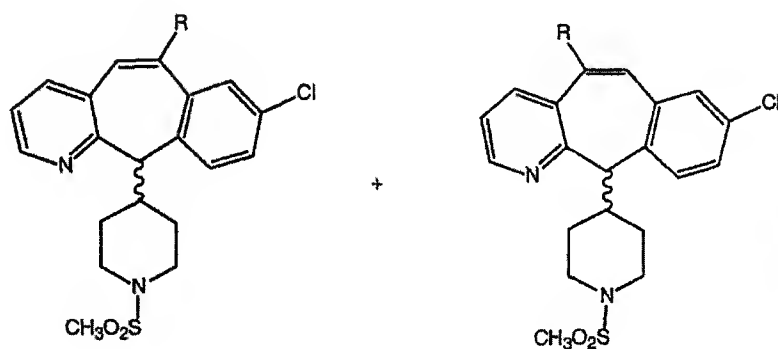

Compound (37): mp = 124-125; MS (FAB) m/z 498 (MH<sup>+</sup>).

Compound (38): mp = 119-120; MS (FAB) m/z 498 (MH<sup>+</sup>).

EXAMPLES (5) AND (6).

5

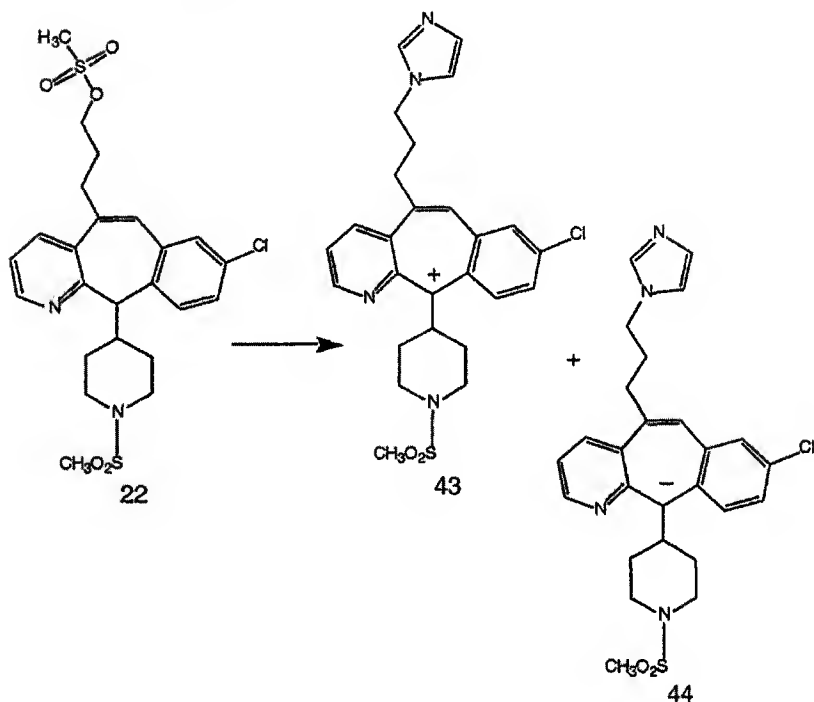

By using the same procedure as above and substituting the appropriate amines, the following mixtures of compounds were prepared:

10

Ex	R=	Compound #:
5		(39) AND (40).
6		(41) AND (42).

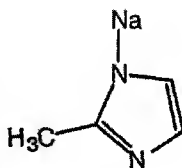

**EXAMPLE 7**  
**Preparation of Compounds (43) and (44).**

5

To a solution of the title compound (22) from Preparative Example 3, Step C (1.0 g, 2.03 mmole) in DMF (20 ml) was added imidazolylsodium (0.257 g, 2.85 mmole). The reaction mixture was heated to 90°C for 2 h. Cooled the reaction and removed DMF. Added saturated sodium bicarbonate and extracted with CH<sub>2</sub>Cl<sub>2</sub>.

- 10 Dried organic layer over magnesium sulfate, filtered and concentrated to dryness. Crude product was purified by Biotage column chromatography eluting with 3% CH<sub>3</sub>OH: (saturated with ammonia)-CH<sub>2</sub>Cl<sub>2</sub>, to afford the title compound as an enantiomeric mixture. The mixture was separated into pure enantiomers on Prep HPLC Chiral AD column eluting with 35-40% Isopropanol-Hexane: 0.2% Diethyl
- 15 amine, to give the title compounds (43) and (44). MS 497 (MH<sup>+</sup>)

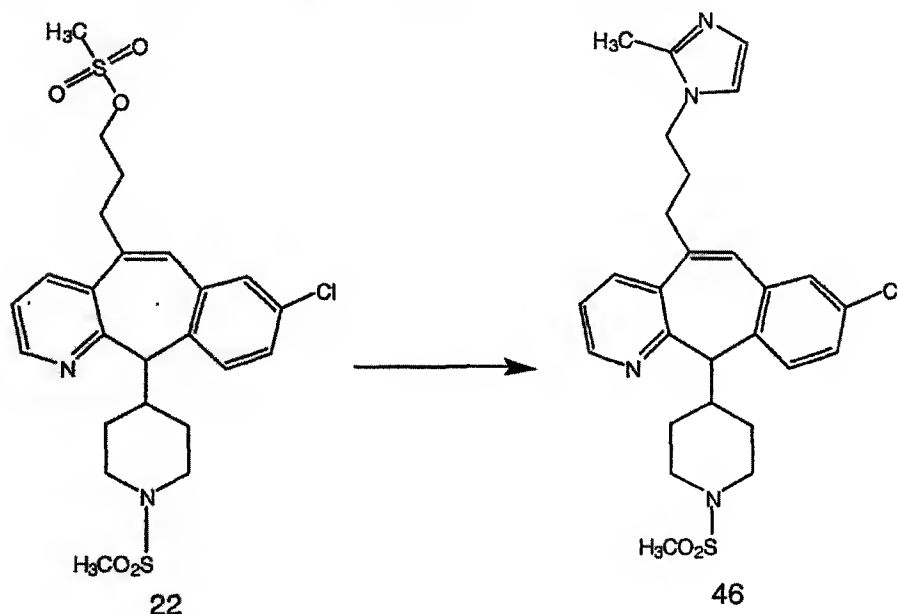

EXAMPLE 8Step A      Preparation of Compound (45).

5

45

2-methylimidazole was dissolved in DMF (10 ml). To this was added one equivalent of NaH and the reaction was allowed to stir at room temperature for 1 h.

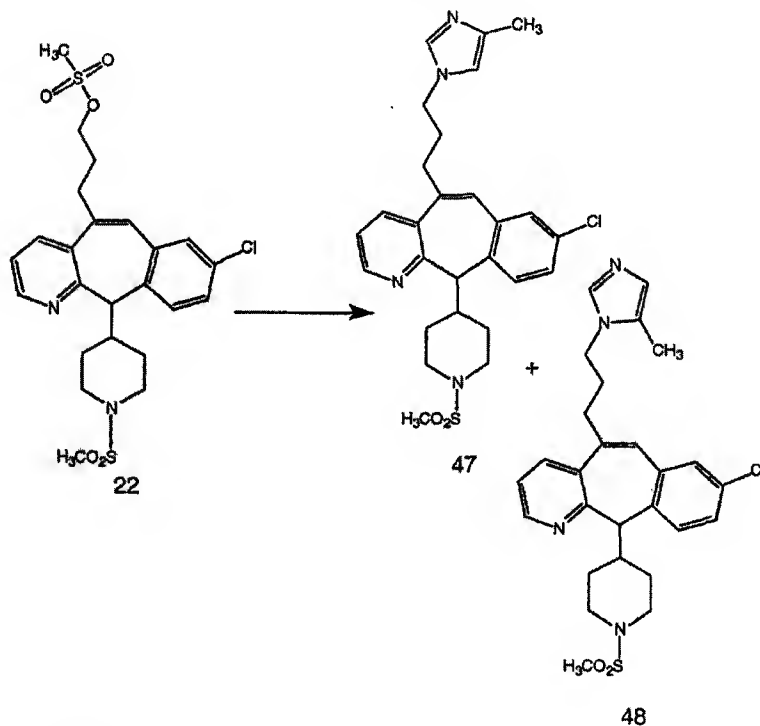

10

Step B      Preparation of Compound (46).

15

Following a similar procedure as described in Example 7, substituting 2-methylimidazolyl sodium (45) for imidazolyl sodium, the racemic mixture of the title compound (46) was prepared. MS 511 (MH<sup>+</sup>).

EXAMPLE 9  
MIXTURE OF COMPOUNDS (47) AND (48).

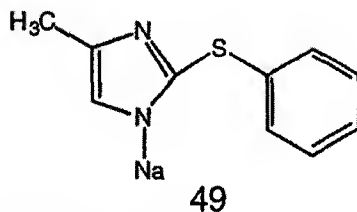

5

Compound (22) was reacted in the same the same manner as Example 8, substituting 4-methyl imidazole in Step A, affording a mixture of 4 and 5-methyl substituted imidazole derivatives (47) and (48).

10

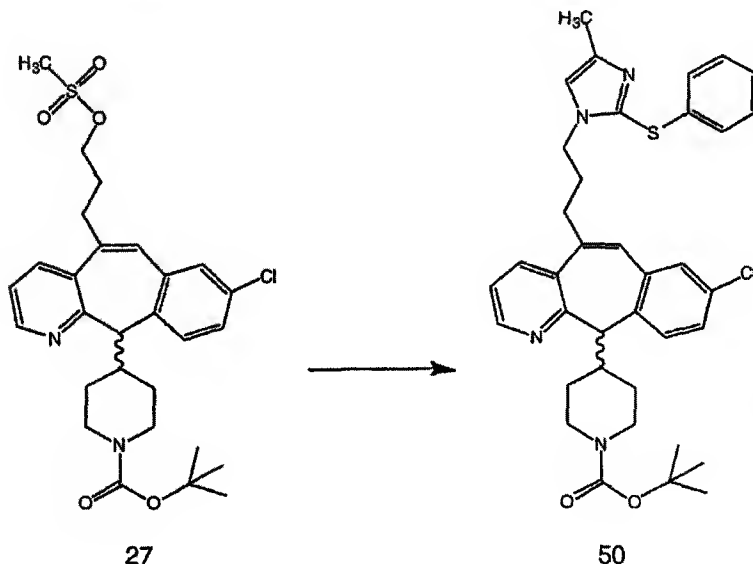

EXAMPLE 10  
Step A      Preparation of Compound (49).

To SEM protected methyl imidazole (30 g, 0.141 mole) prepared according to literature procedure, Whitten, J.P., J. Org. Chem. 1986, 51, 1891-1894., in THF (250 ml) at -78°C was added 2.5 M n-butyl lithium (74 ml, 0.184 mole) over 1 h. The solution was stirred for 1 h at -78°C, then a solution of diphenyl disulfide (34.27 g, 0.155 mole) in THF (125 ml) was added over 1/2 h. The mixture was stirred and warmed to room

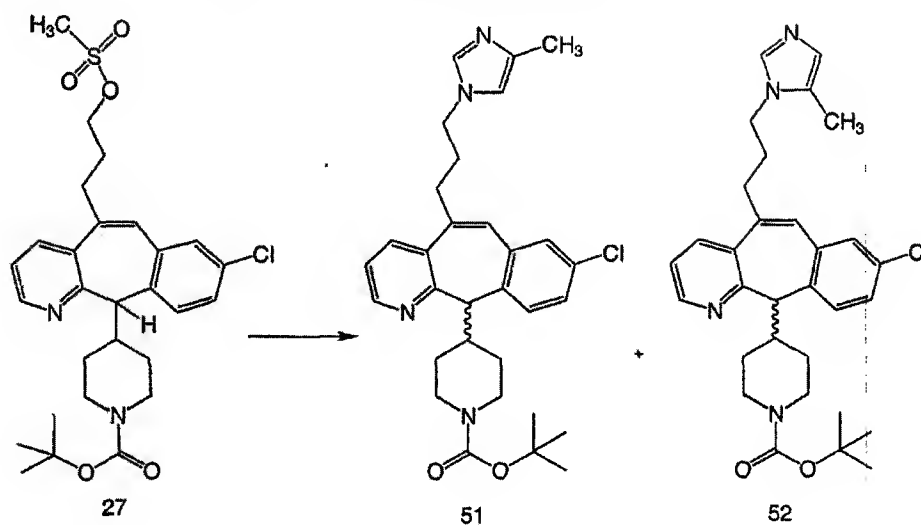

temperature over night. The solvents were removed and then the residue was diluted with ethyl acetate (250 ml) and washed with 1.0 M NaOH (5 x 50 ml) and then brine (50 ml). The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated. The crude product (45.28 g, 0.141 mole) was dissolved in ethanol (100 ml) and 5 M aqueous HCl (100 ml) and stirred for 12 h. at 60°C. The solvent was removed and the residue was dissolved in distilled H<sub>2</sub>O. 5M aqueous NaOH was added until pH=8, then the mixture was extracted with ethyl acetate. Combined organic layers and washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated. Purified by flash chromatography eluting with 70% Hexanes:Acetone to afford the product as a white solid. The amine was further reacted with NaH (1 equivalent) in DMF for 1 h. affording the title compound (49).

Step B      Preparation of Compound (50).

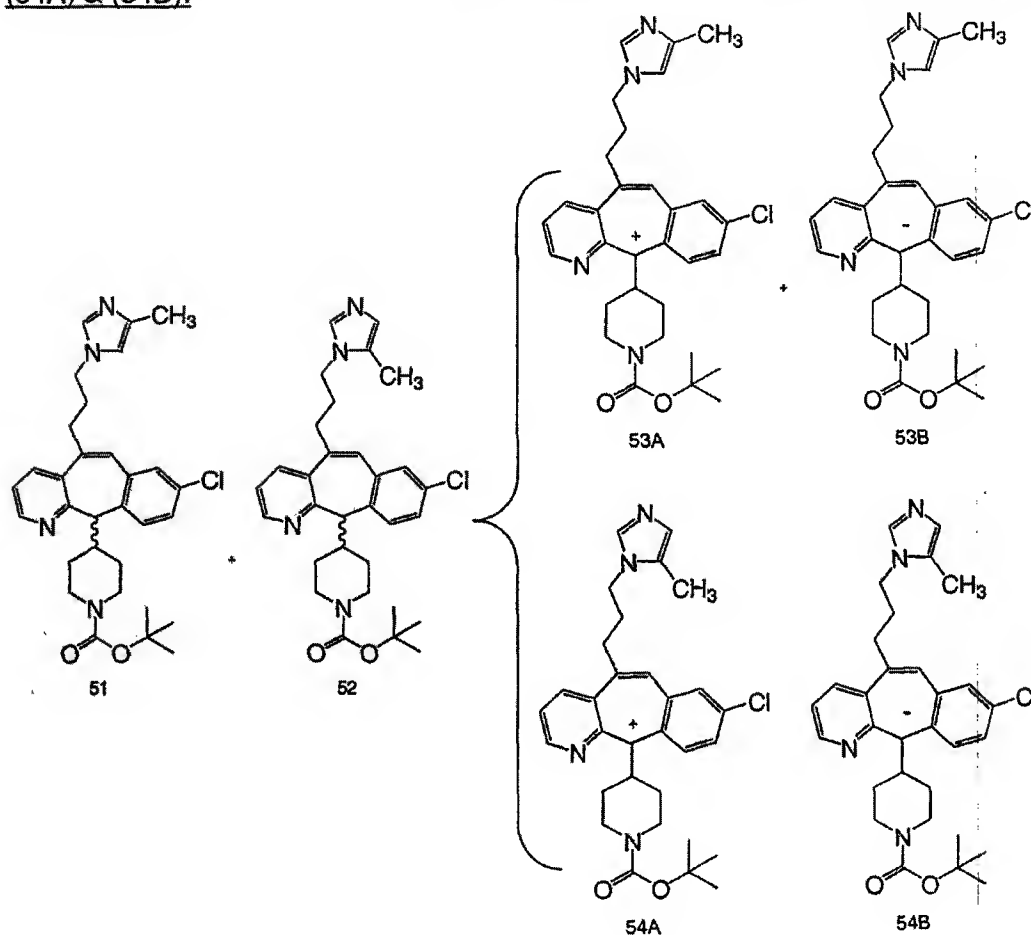

15

Compound (27) from PREPARATIVE EXAMPLE 4, STEP E was reacted in the same manner as EXAMPLE 8, substituting 4-methyl-2-phenylsulfanyl-1H-imidazole sodium (49), affording the title compound (50) as a light yellow solid. MS 643 (MH<sup>+</sup>).

EXAMPLE 11Step A      Mixture of Compounds (51) AND (52).

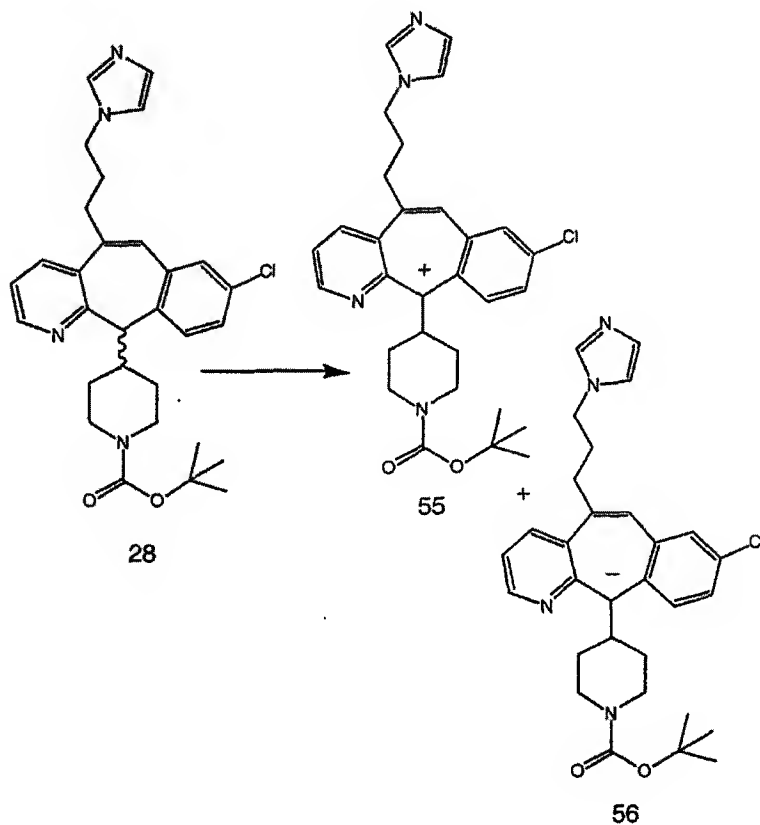

- 5      Compound (27) from PREPARATIVE EXAMPLE 4, STEP E, was treated in the same manner as in Example 9 above to afford a mixture of the 4 and 5-substituted imidazol title compounds (51) and (52).

Step B  
(54A) & (54B).Preparation of pure (+,-) Compounds (53A) & (53B); and pure (+,-)

- 5 The compounds from Step A above were further separated into a mixture of (4 and 5) (+) enantiomers and (4 and 5) (-) enantiomers using preparatory HPLC Chiral AD column, eluting with 20% Isopropanol-Hexane : 0.2% Diethyl amine. MS 532 (MH<sup>+</sup>). The pure (+) and (-) enantiomeric pairs were then reacted with triphenyl methyl chloride (Aldrich) in CH<sub>2</sub>Cl<sub>2</sub> starting at 0°C and warming to room temperature over 3 h. The
- 10 crude product was purified by column chromatography eluting with 50% ethyl acetate-acetone, affording the pure (+) and (-) 4-methyl substituted enantiomers (53A) and (53B); MS 533 (MH<sup>+</sup>). The column was then flushed with 100% methanol, the fraction was concentrated and the residue was treated with methanol saturated with ammonia, overnight at reflux temperature. The product was purified by column chromatography
- 15 eluting with 50% ethyl acetate-acetone, affording the pure (+) and (-) 5-methyl substituted enantiomers (54A) and (54B); MS 533 (MH<sup>+</sup>).

**EXAMPLE 12****Preparation of Compounds (55) and (56).**

5

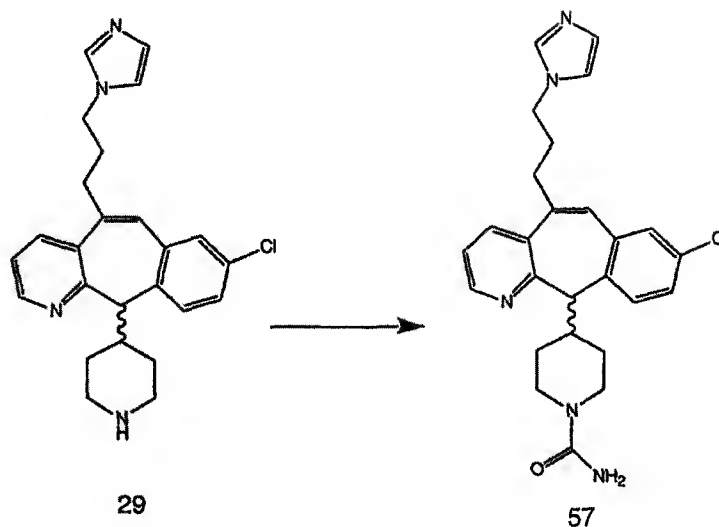

Compound (28) from PREPARATIVE EXAMPLE 4, STEP F, was separated into pure enantiomers by preparatory HPLC using a chiral AD column eluting with 20% Isopropanol:Hexane: 0.2% Diethyl amine to give pure title compounds (55) and (56). MS 519 (MH<sup>+</sup>).

10

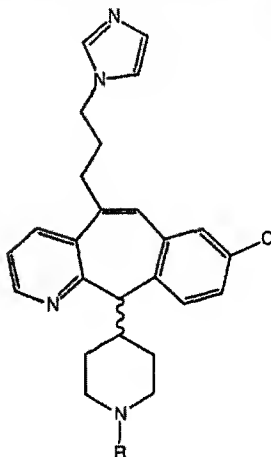

EXAMPLE 13Preparation of compound (57).

5

Compound (29) from PREPARATIVE EXAMPLE 4, STEP G (0.20 g, .48 mmole) was dissolved in  $\text{CH}_2\text{Cl}_2$  (10 ml). Added triethyl amine (0.30 ml, 1.92 mmole) followed by trimethylsilyl isocyanate (Aldrich) (1.3 ml, 9.6 mmole) and stirred at room temperature over night. Quenched reaction with 1.0 N NaOH and extracted with  $\text{CH}_2\text{Cl}_2$ . Dried organic layer over  $\text{MgSO}_4$ , filtered and concentrated. Purified by column chromatography eluting with 3-5% Methanol saturated with Ammonia- $\text{CH}_2\text{Cl}_2$ , affording the title compound (57) as a white solid. MS 464 ( $\text{MH}^+$ ).

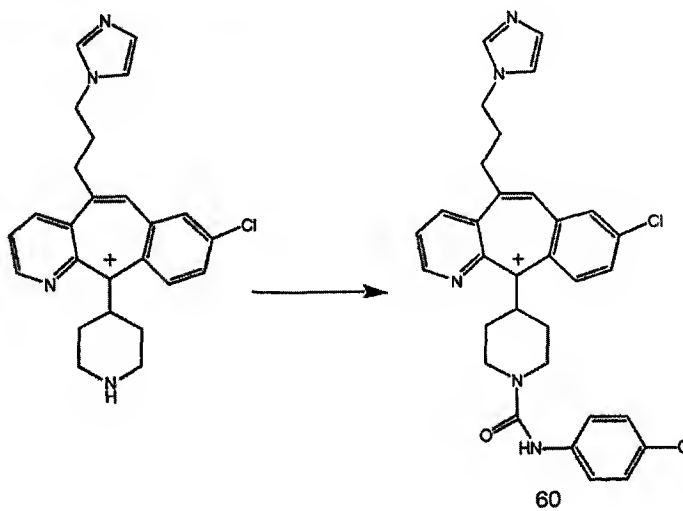

98

EXAMPLES 14 AND 15

By substituting the appropriate isocyanates, and following the procedure described in EXAMPLE 13 above, the following compounds were prepared:

5

Ex	R=	Compound #:
14		(58). MS 518 (MH <sup>+</sup> ).
15		(59). MS 544 (MH <sup>+</sup> ).

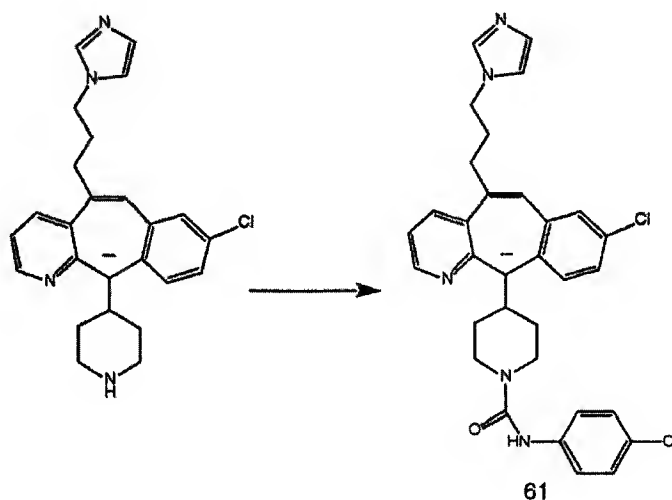

EXAMPLE 16Preparation of Compound (60).

10

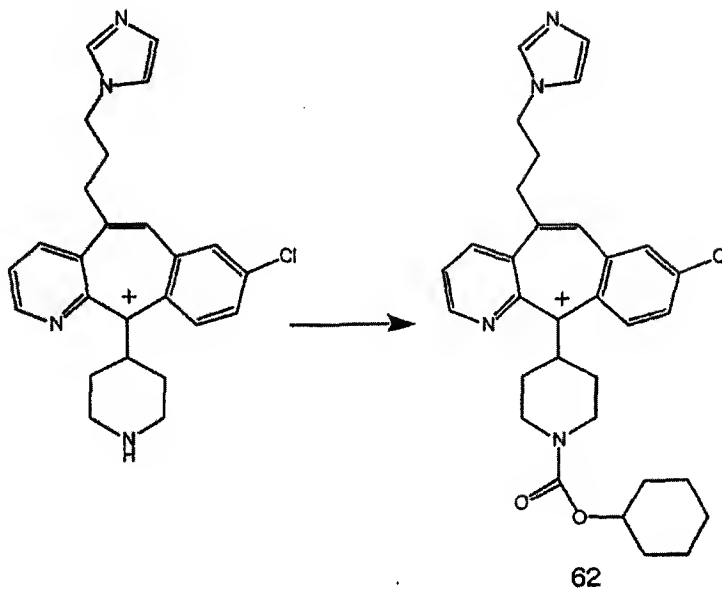

Compound (55) was deprotected following the procedure described in PREPARATIVE EXAMPLE 4, STEP G, to give the (+) enantiomer of the starting amine which was then reacted with 4-Chlorophenyl isocyanate (Aldrich) (0.05 g, 0.34 mmole) in the same manner as Example 13 above, affording the title compound (60) as a white solid. MS 572 ( $MH^+$ ).

#### EXAMPLE 17

##### Preparation of Compound (61).

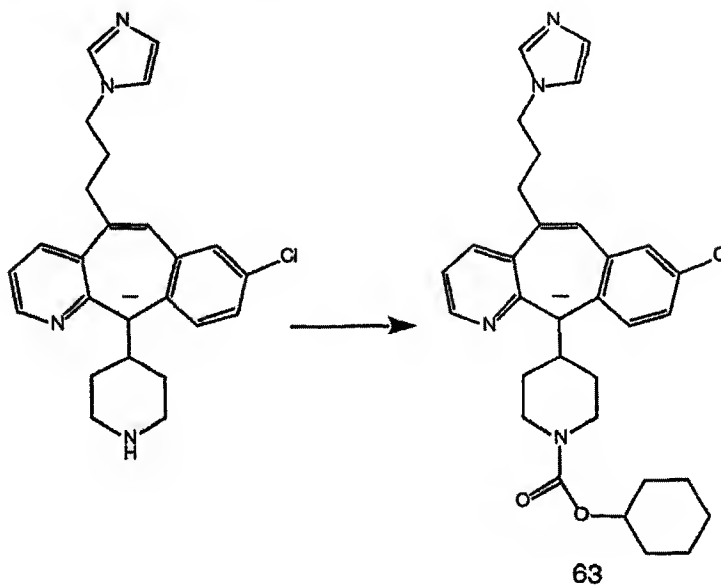

Compound (56) was deprotected following the procedure described in PREPARATIVE EXAMPLE 4, STEP G to give the (-) enantiomer of the starting amine. Reacting in the same fashion as Example 16 above, afforded the title compound (61) as a white solid. MS 572 ( $MH^+$ ).

EXAMPLE 18Preparation of Compound (62).

5

Following the procedure described in EXAMPLE 16, substituting cyclohexyl chloroformate (BASF) in place of the isocyanate, afforded the title compound (62) as a white solid. MS 545 (MH<sup>+</sup>).

10

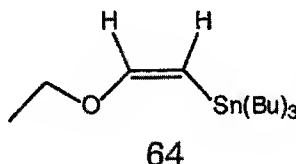

EXAMPLE 19Preparation of Compound (63).

Following the same procedure as described in EXAMPLE 18 above, substituting the (-) enantiomer of the starting amine from EXAMPLE 17, afforded the title compound (63) as a white solid. MS 545 (MH<sup>+</sup>).

5

### PREPARATIVE EXAMPLE 6

A. PREPARATION OF TRIBUTYL-(2-ETHOXY-VINYL)-STANNANE (64).

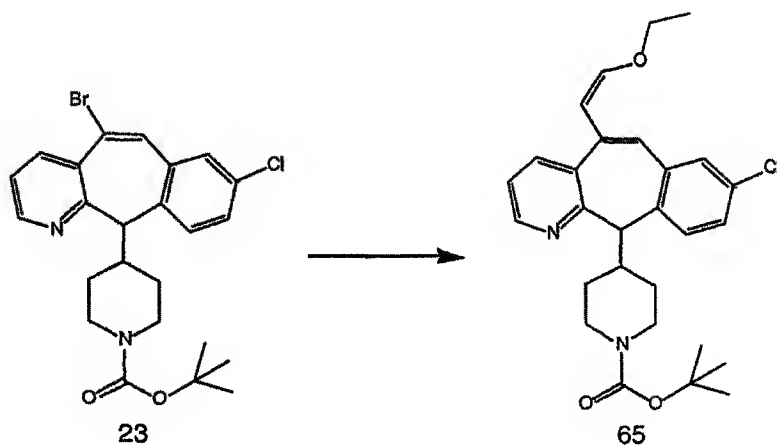

10

In a sealed tube, was added ethoxy ethyne (Fluka) followed by tributyltin hydride (Aldrich) and heated to 55°C for two days. The reaction mixture was then concentrated to a brown red liquid. Purification via distillation afforded the title compound (64) as an off-white liquid. BP range 98°-115°C, (.35 to .2 mmHg).

15

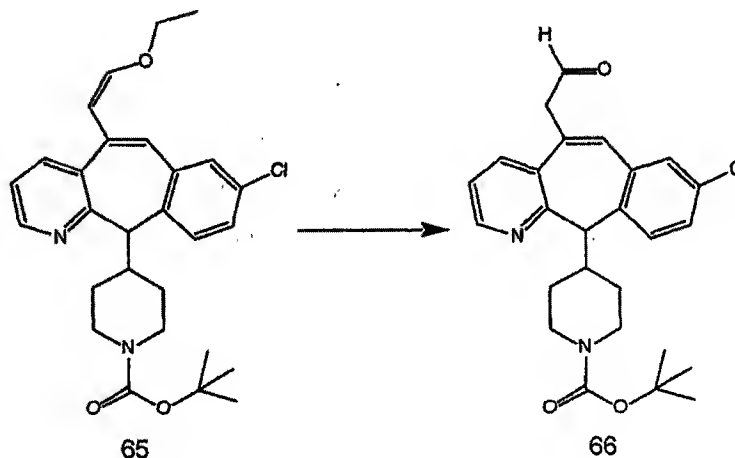

**Step B**      **Preparation of Compound (65).**

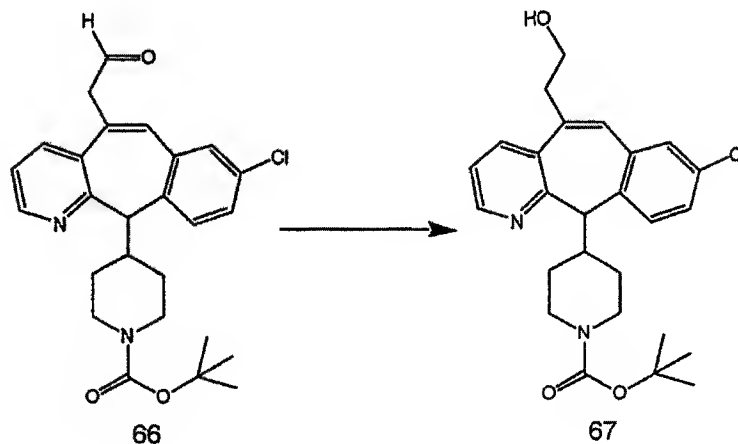

20 To a solution of compound (23) from Preparative Example 4, Step A (6.51 g, 13.29 mM), dichlorobis(triphenylphosphine) palladium(II) (Alrich) (0.373 g, .53 mM), and tetrabutylammonium chloride (Aldrich) (3.69 g, 13.29 mM) in DMF (50 ml) was added compound (64) from PREPARATIVE EXAMPLE 6, STEP A. The reaction

stirred over night at 75-80°C under nitrogen atmosphere. The reaction was cooled to room temperature, then a solution of KF (.93 g, 15.94 mM) in H<sub>2</sub>O (70 ml) was added. A precipitate formed upon addition. The reaction mixture was stirred for fifteen minutes then added CH<sub>2</sub>Cl<sub>2</sub> and stirred an additional fifteen minutes. The reaction mixture was extracted with CH<sub>2</sub>Cl<sub>2</sub>, the organic layer was dried over magnesium sulfate, filtered and concentrated. Purified by silica gel column chromatography eluting with 1:3% -1:1% ethyl acetate-hexanes affording the title compound (65) as a yellow solid, mp 86-90°C.

10      Step C      Preparation of Compound (66).

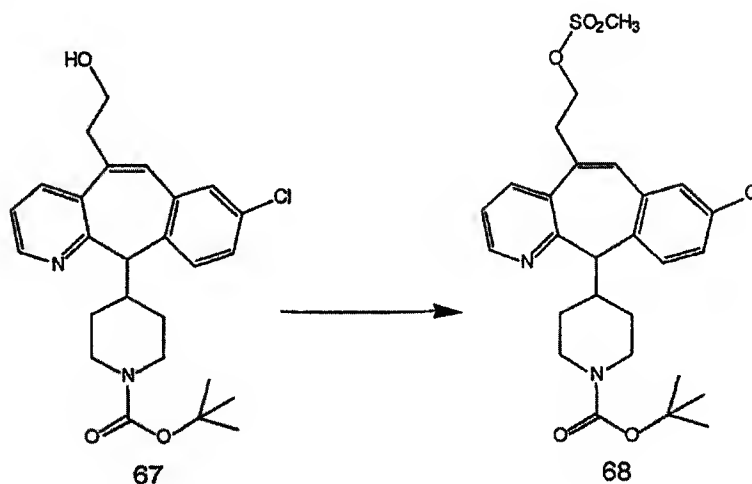

To a solution of compound (65) from Preparative Example 6, Step B (3.25 g, 6.76 mM) in THF/H<sub>2</sub>O (33.7 ml/7.3 ml), was added mercury (II) acetate. The reaction stirred at room temperature for fifteen minutes during which time a precipitate formed. To the mixture was then added saturated KI solution (70-80 ml) and was stirred for five minutes. Added CH<sub>2</sub>Cl<sub>2</sub> and stirred for 1 h. The reaction was extracted with CH<sub>2</sub>Cl<sub>2</sub> (2 x 100 ml). The organic layer was dried over magnesium sulfate, filtered and concentrated to afford the title compound (66) as a light brown solid. MS 453 (MH<sup>+</sup>).

D. Preparation of Compound (67).

5

To a solution of compound (66) from Preparative Example 6, Step C (3.06 g, 6.8 mM) in ethanol (40 ml) was added sodium borohydride (0.31 g, 8.1 mM) in two portions over seven minutes. The reaction stirred for 45 minutes was then concentrated, taken up in ethyl acetate and washed with brine. Re-extracted brine layer with additional ethyl acetate and then combined organic layers, dried over magnesium sulfate, filtered and concentrated to a solid. Further purification by silica gel column chromatography eluting with 1:1-5:1 ethyl acetate-hexane afforded the title compound (67) as a white solid. MP range 120-130°C; MS 455 (MH<sup>+</sup>).

10

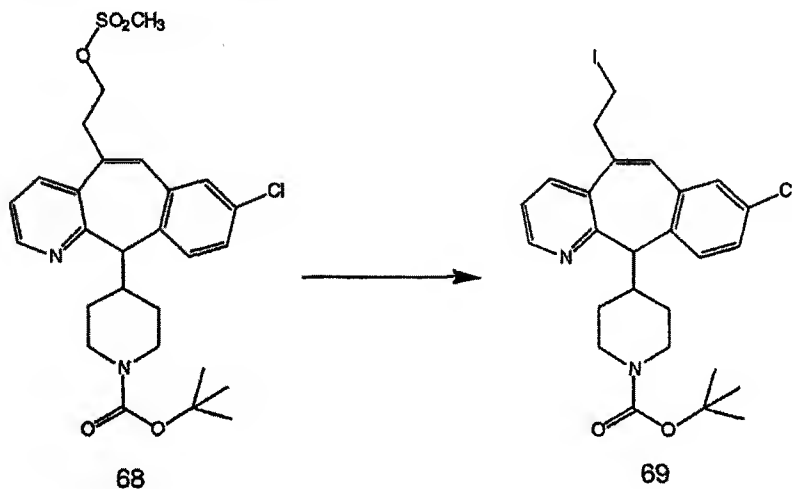

E. Preparation of Compound (68).

15

Compound (67) from Preparative Example 6, Step D was reacted in the same manner as described in Preparative Example 3, Step C, to afford the title compound (68) as a peach solid.

F. Preparation of compound (69).

5

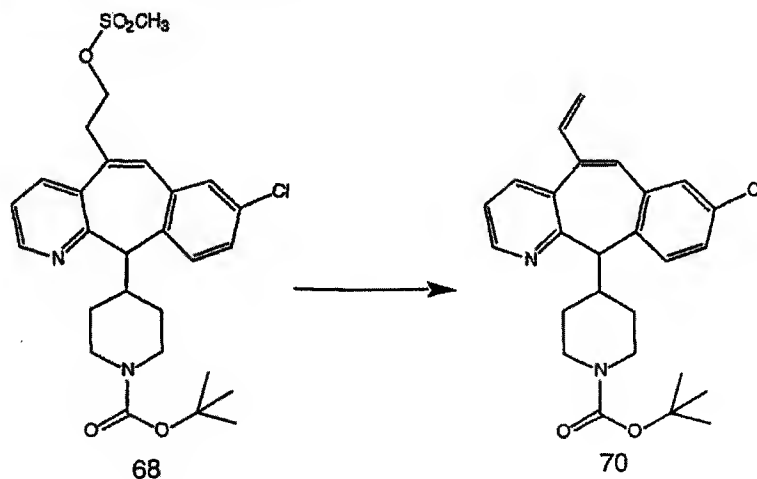

Compound (68) from Preparative Example 6, Step D (0.1 g, .19 mM) was dissolved in THF (2.5 ml). To the mixture was added LiI (Aldrich) (0.064 g, .48 mM) and stirred over night at room temperature. The reaction mixture was concentrated, taken up in  $\text{CH}_2\text{Cl}_2$  and washed with brine (25 ml). The organic layer was dried over magnesium sulfate, filtered and concentrated to afford the title compound (69) as a yellow-brown solid.

10

EXAMPLE 20

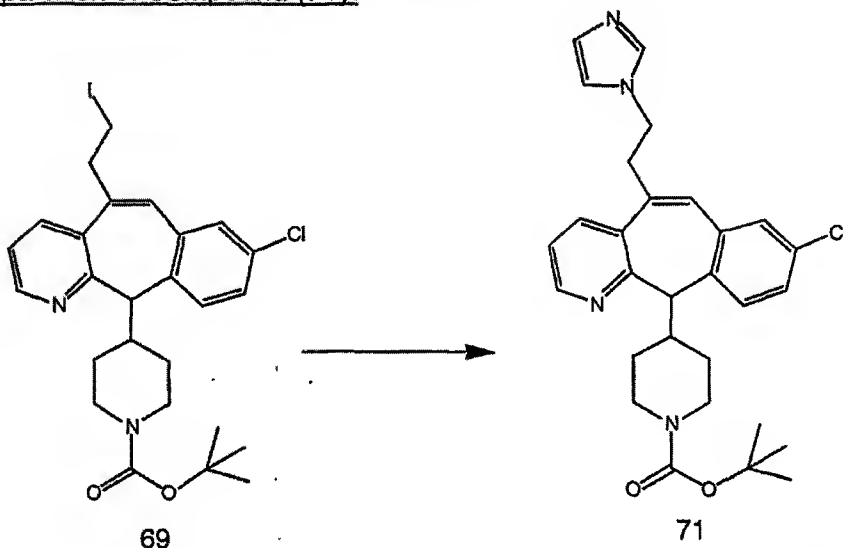

Preparation of compound (70).

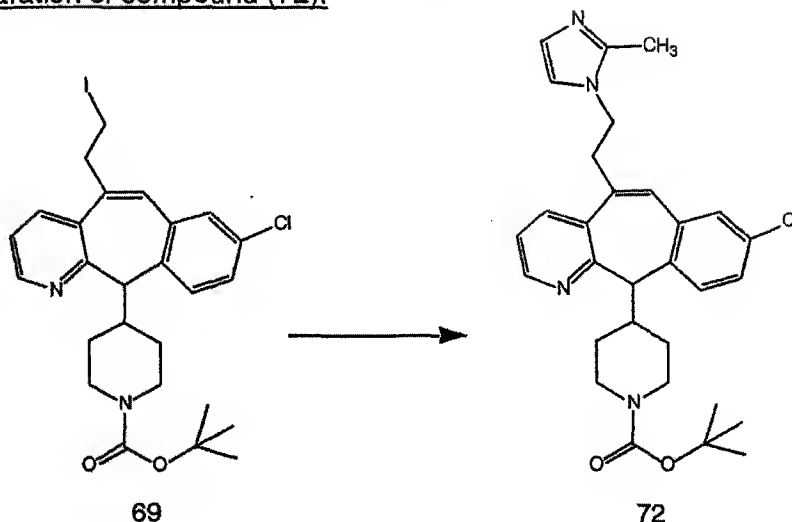

Compound (68) from Preparative Example 6, Step E, was reacted in the same manner as described in Example 8, Step B, resulting in the title compound (70) as a white solid, mp 94-101°C.

#### EXAMPLE 21

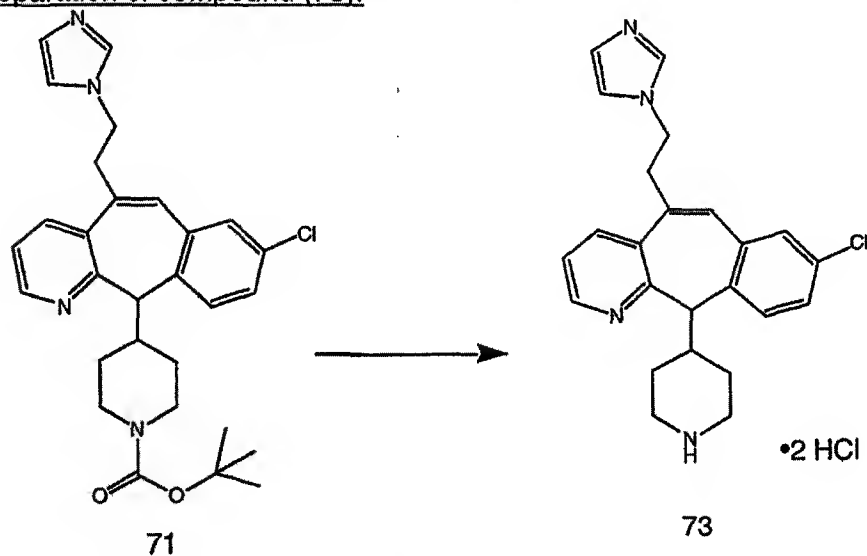

##### 5 Preparation of Compound (71).

To compound (69) from Preparative Example 6, Step F (0.3 g, .05 mM) in CH<sub>3</sub>CN (1 ml) was added imidazole (Aldrich) (0.014 g, .2 mM). The reaction was heated to 52°C and stirred over night. The reaction was cooled, concentrated, then diluted with ethyl acetate and washed with brine. The organic layer was dried over magnesium sulfate, filtered and concentrated. The product was purified by silica gel column chromatography eluting with 0-5% methanol/ saturated with ammonia:CH<sub>2</sub>Cl<sub>2</sub> to afford the title compound (71) as a white solid. mp 95-104°C; MS 505 (MH<sup>+</sup>).

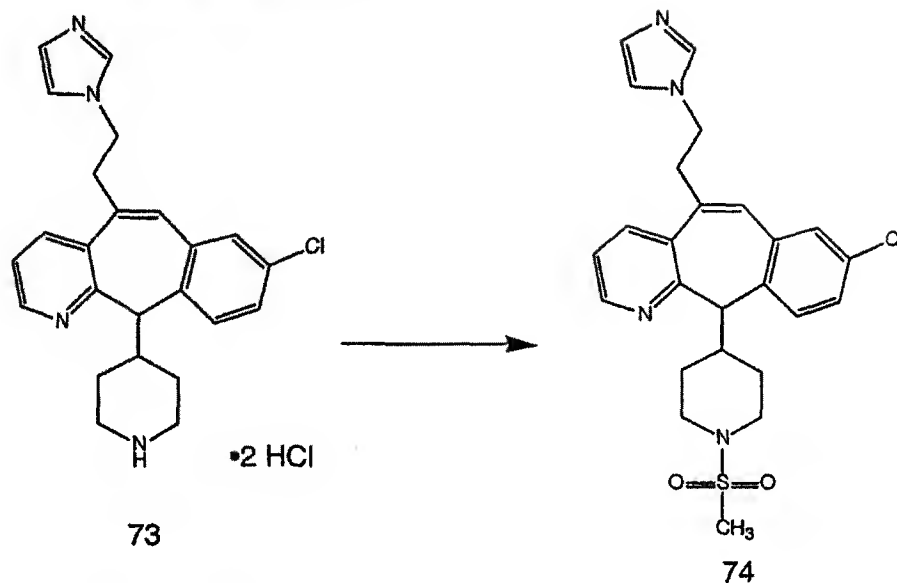

**EXAMPLE 22****Preparation of compound (72).**

- 5 Substituting 2-methyl imidazole for imidazole and reacting in essentially the same manner as Example 21, the title compound (72) was afforded as a light tan solid. mp 93-104°C.

**EXAMPLE 23****Preparation of compound (73).**

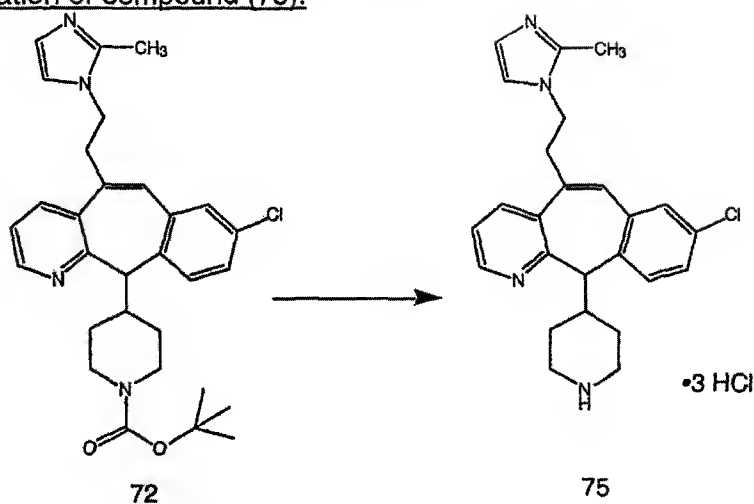

10

Compound (71) (0.31 g, 0.06 mM) from Example 21 was dissolved in 4M HCl/Dioxane (0.5 ml) and stirred for 1 h. Concentration of the reaction mixture afforded the title compound (73) as a light yellow solid. mp 195-205°C.

**EXAMPLE 24****Preparation of Compound (74).**

To a solution of compound (73) from Example 23 (0.026 g, 0.05 mM) in  $\text{CH}_2\text{Cl}_2$ , was added, triethyl amine (Aldrich) (0.046 ml, 0.33 mM) followed by methane sulfonyl chloride (Aldrich) (0.01 ml, 0.1 mM). The reaction stirred at room temperature for 36 h. The reaction was quenched with saturated sodium bicarbonate (50 ml) and extracted with ethyl acetate (2 x 75 ml). The organic layer was dried over magnesium sulfate, filtered and concentrated. The product was purified by preparatory thin layer chromatography eluting with 90:10  $\text{CH}_2\text{Cl}_2$ : methanol saturated with ammonia to afford the title compound (74), mp 105-116°C.

10

EXAMPLE 25Preparation of compound (75).

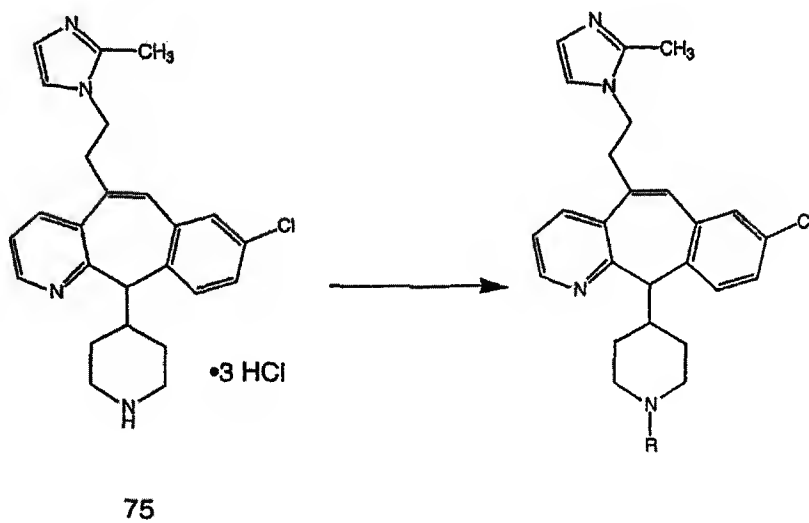

5

Compound (72) from Example 22 was stirred with 4M HCl/Dioxane over 2 h. Concentration of reaction mixture afforded the title compound (75) as an off-white solid, mp 185-203°C.

EXAMPLE 26-29

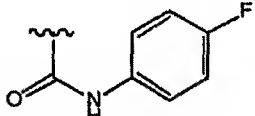

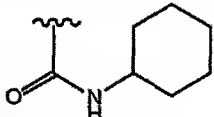

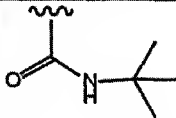

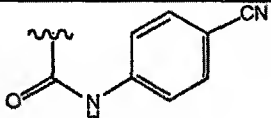

10

Reacting compound (75) from Example 25, in the same manner as described in Example 13, and substituting the appropriate isocyanate, the following compounds were prepared:

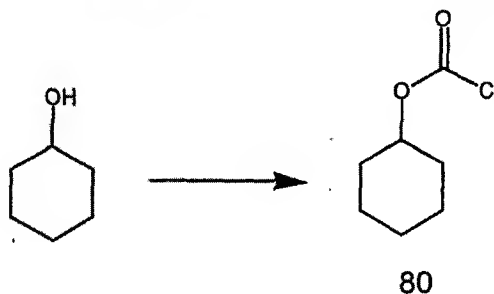

15

Ex	R=	Compound #:
----	----	-------------

26		(76). mp 133-144°C
27		(77). mp 131-140°C
28		(78). mp 125-132°C.
29		(79). mp 160-172°C

EXAMPLE 30A. PREPARATION OF CYCLOHEXYL CHLOROFORMATE

5

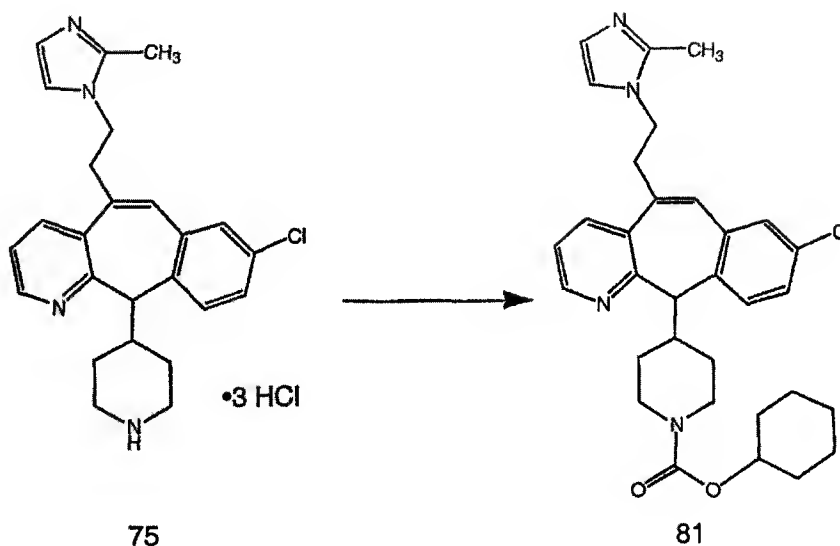

A solution of cyclohexanol (Aldrich) (25 ml, 0.2 mol) in  $\text{CH}_2\text{Cl}_2$  (50 ml) was added dropwise over 1 h to a solution of phosgene in toluene (262 ml of a 1.93 M solution, 0.5 mol) at 0°C. The reaction was warmed to room temperature over 3 h. and stirred over night. The volatiles were removed to afford the title compound (80) as a colorless liquid.

15

B. Preparation of compound (81).

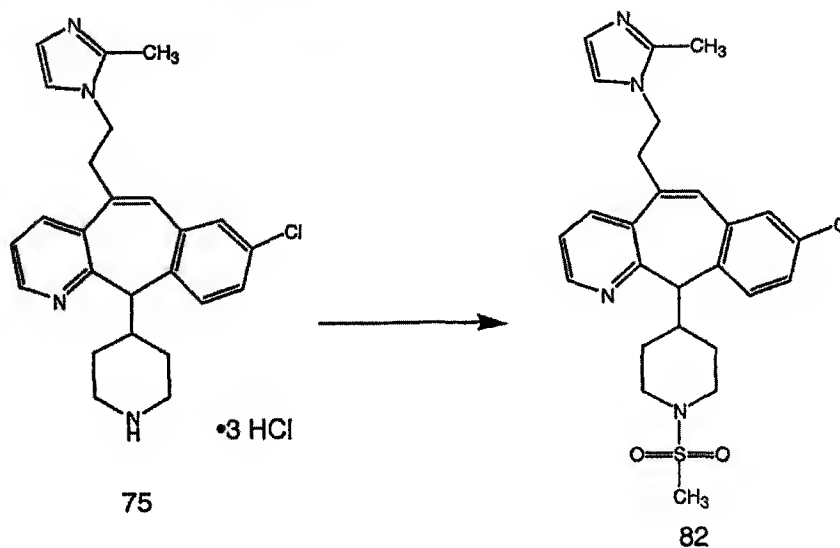

110

Reacting compound (75) from Example 25 in the same manner as described in Example 13, substituting the acid chloride (80) from Example 30, Step A in place of the isocyanate, afforded the title compound (81) as an off-white semi-solid.  
mp 89-98°C.

#### EXAMPLE 31

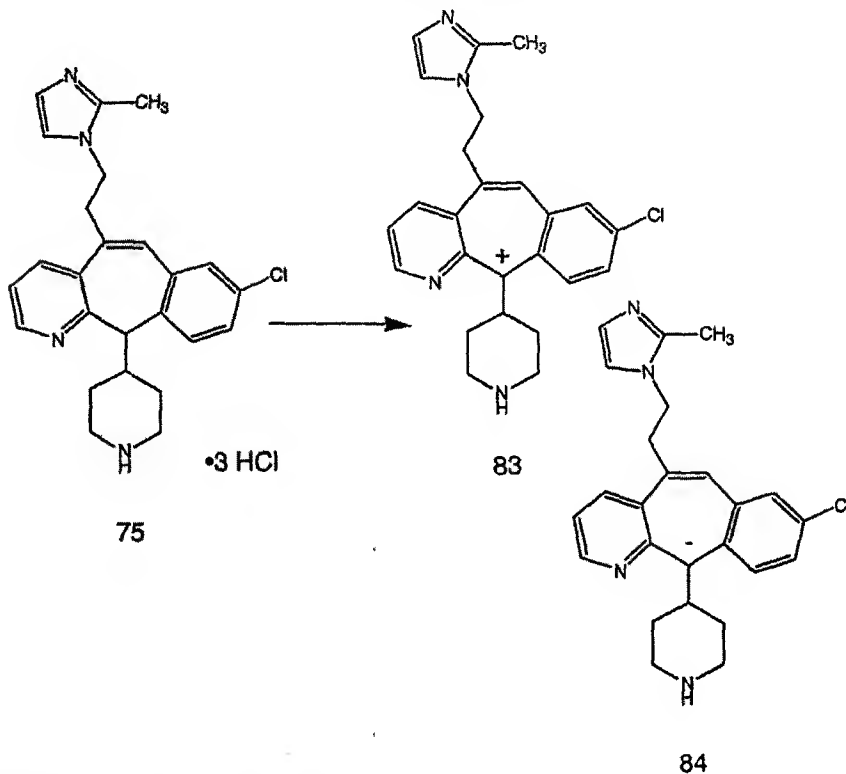

##### Preparation of compound (82).

Reacting compound (75) from Example 25 in the same manner as described in Example 13 but substituting methanesulfonyl chloride in place of the isocyanate, afforded the title compound (82) as a tan semi-solid mp 120-129°C.

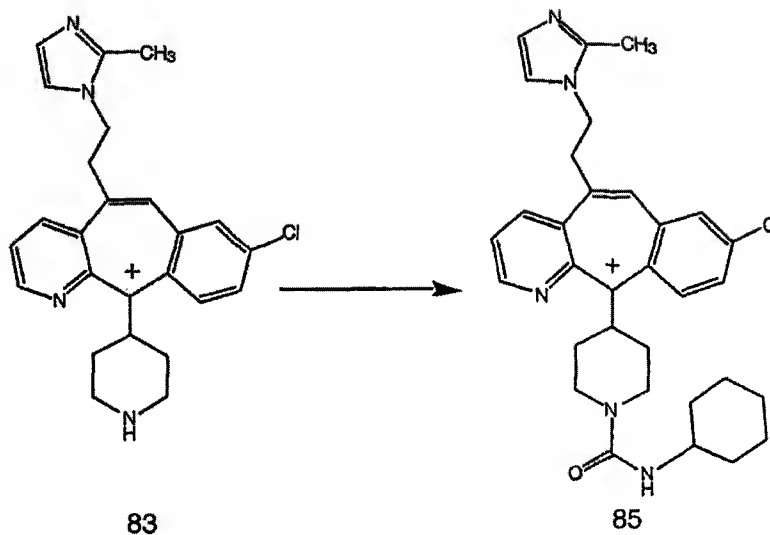

**EXAMPLE 32**

Separation of compound (75) into (+) and (-) enantiomers (83) and (84).

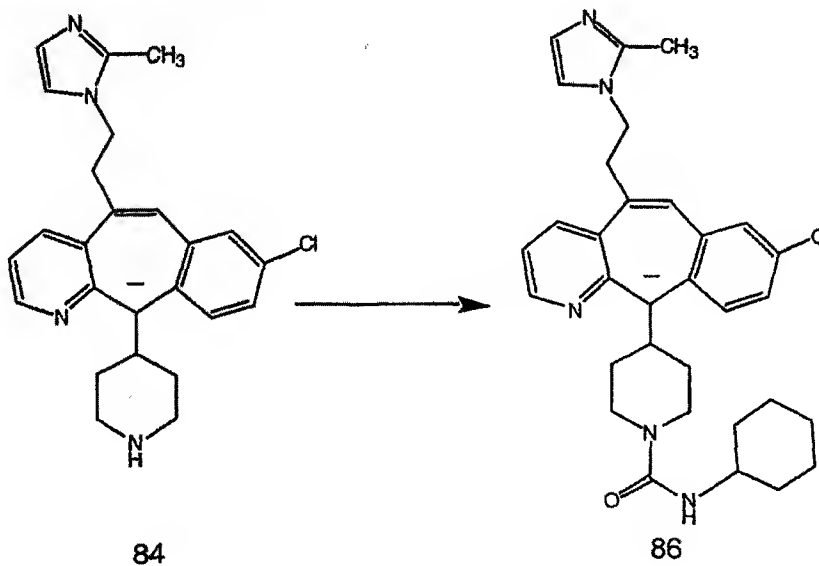

5

Compound (75) was separated into pure (+) and (-) enantiomers using preparatory chiralpak-AD column chromatography, eluting with 85:15:0.2% 2-propanol:hexane/ diethyl amine affording the title compounds (83) and (84) respectively.

**EXAMPLE 33****Preparation of compound (85).**

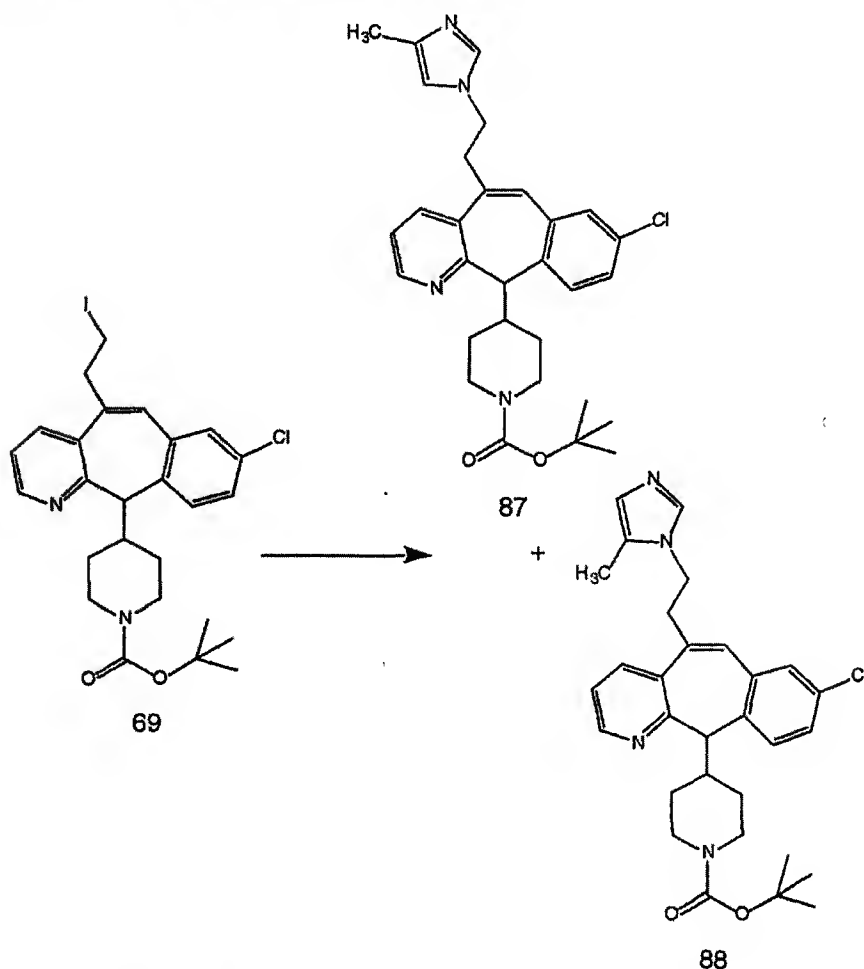

Compound (83) was reacted in the same manner as in Example 27 affording the title compound (85) as a white solid. mp 122-129°C.

**EXAMPLE 34****Preparation of compound (86).**

Compound (84) was reacted in the same manner as in Example 27 affording the title compound (86) as a white solid mp 118-133°C.

### EXAMPLE 35

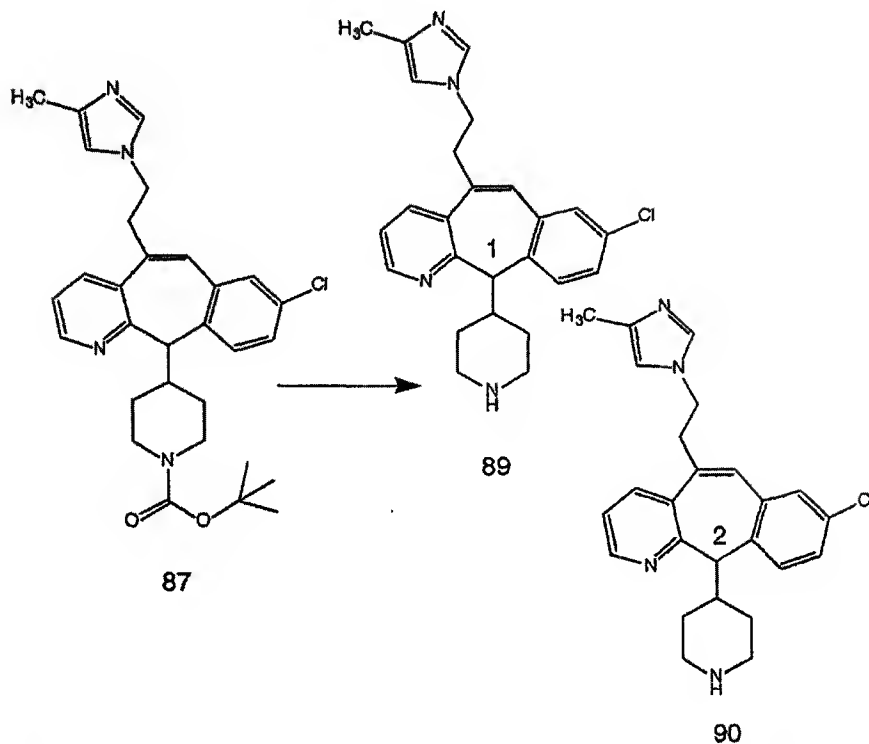

#### 5 Preparation of Compounds (87) AND (88).

10 Compound (69) from Example 19 was reacted in the same manner as described in Example 21 substituting 4-methyl imidazole for imidazole, to afford a mixture of the 4 and 5 substituted imidazole derivatives. The mixture (0.234 g, 0.45 mM) was subsequently treated with trityl chloride (Aldrich) (0.047 g, 0.17 mM) and separated by preparatory thin layer chromatography, eluting with 1:6% ethyl acetate-acetone affording the pure isomers (87) and (88) mp (87) 97-107°C (white solid).

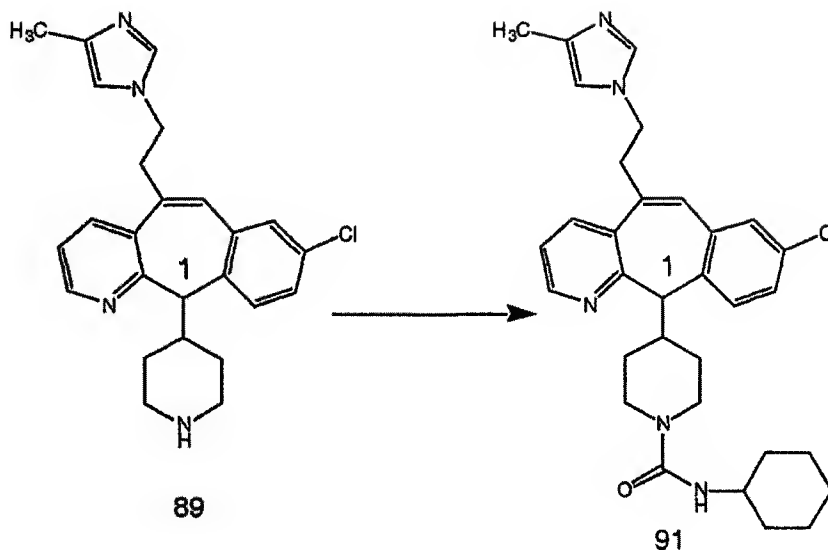

**EXAMPLE 36****Preparation of compound (89).**

5

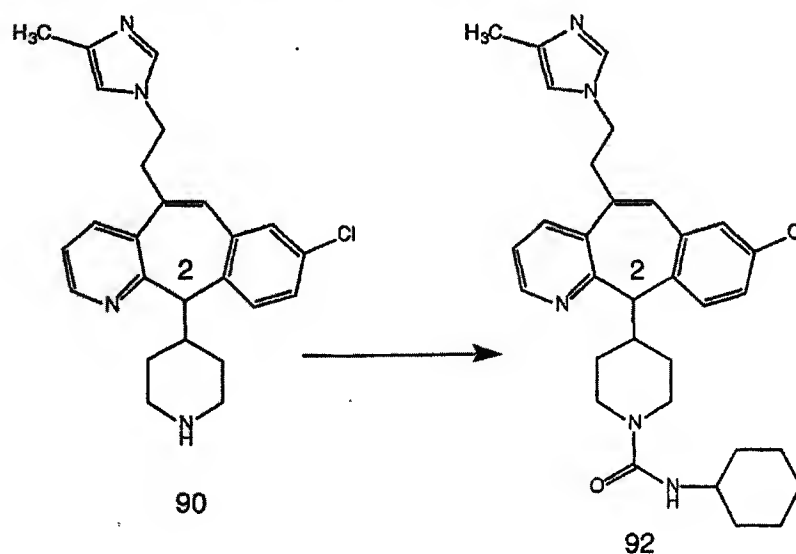

Compound (87) from Example 35 (0.085 g, 0.16mM) was reacted in the same manner as described in Example 25. The resulting enantiomeric mixture was then separated by Preparatory Chiralpak-AD column chromatography eluting with 15-85% Isopropanol-Hexane, 0.2% diethylamine, affording enantiomers 1 and 2 as off-white solids.

10

EXAMPLE 37Preparation of compound (91).

Enantiomerically pure compound (89) from Example 36 (0.02 g, 0.049 mM) was reacted in a similar manner as in Example 27 to afford the title compound (91) as a white solid. mp 130-142°C

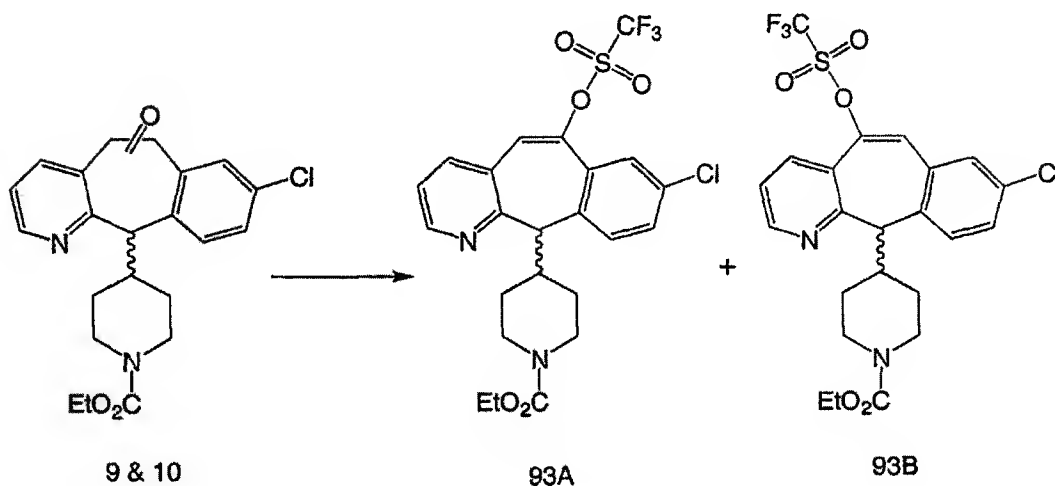

10

EXAMPLE 38Preparation of compound (92).

Enantiomerically pure compound (90) from Example 36 (0.023 g, 0.054 mM) was reacted in a similar manner as in Example 27 to afford the title compound (92). mp 125-135°C.

PREPARATIVE EXAMPLE 7

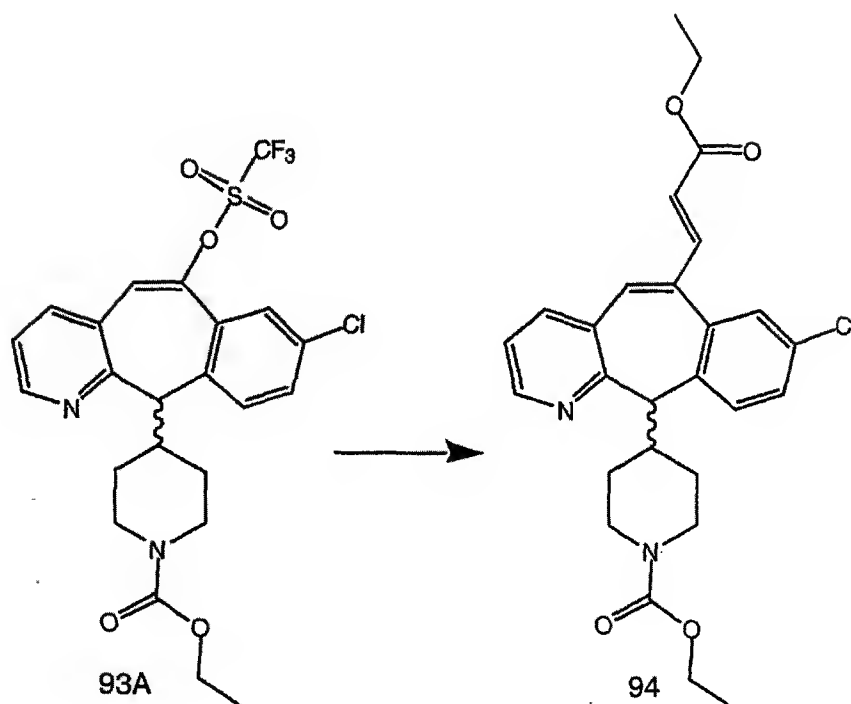

5 A. Compounds (93A & B).

10

A mixture of piperizinyll compounds (9) and (10) from PREPARATIVE EXAMPLE 1, STEP F in THF at -78°C was reacted with LDA (1.1 eq.) and stirred for 1.5 h. The mixture was warmed to -20°C and then N-phenyl trifluoromethane sulfonimide (1.1 eq.) was added. Stirred over night at room temperature then extracted mixture with EtOAc and washed with H<sub>2</sub>O. Dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated. Purification and separation by flash silica gel column chromatography afforded pure Compounds (93A & 93B).

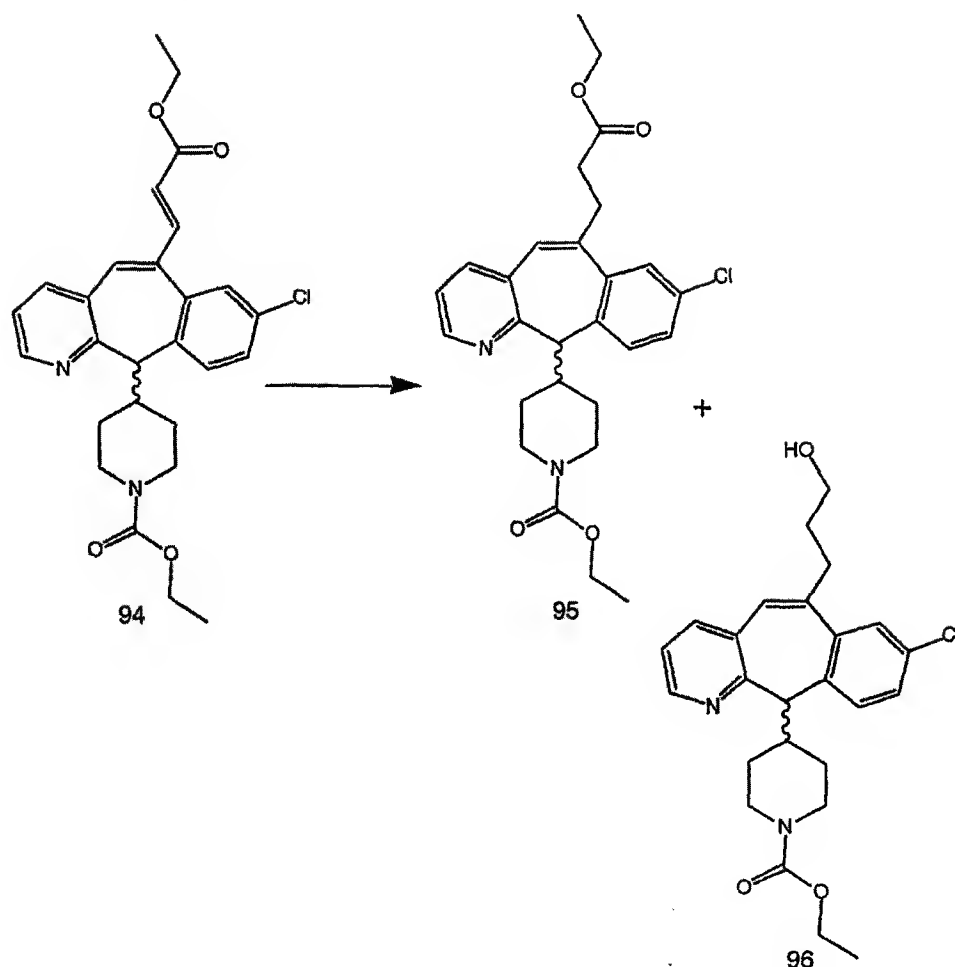

15

B. Preparation of compound (94).

5

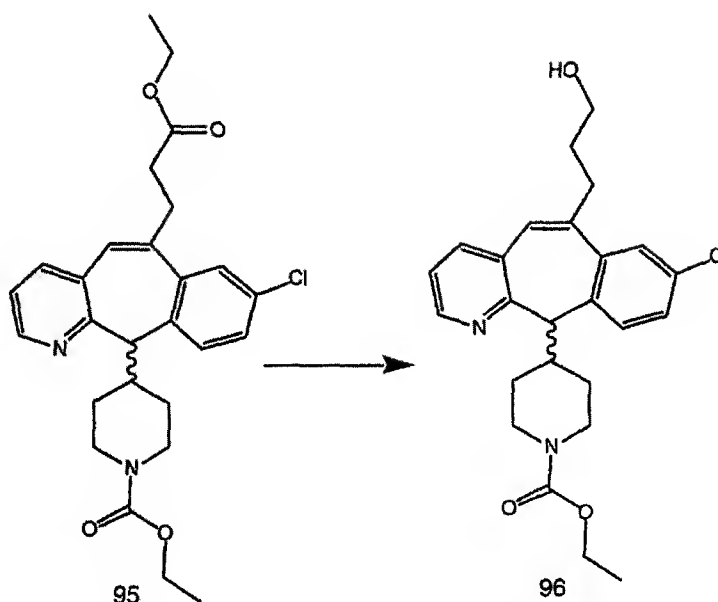

Compound (93A) from above was dissolved in DMF. Successively added, Et<sub>3</sub>N (29 eq.), Ethyl acrylate (5.4 eq.), K<sub>2</sub>CO<sub>3</sub> (5 eq.), Bu<sub>4</sub>NBr (2 eq.) and Palladium (II) acetate (0.13 eq.). The mixture stirred and heated to 100°C for 4 h. After cooling, the mixture was concentrated and the residue was taken up in CH<sub>2</sub>Cl<sub>2</sub> and extracted with

10 CH<sub>2</sub>Cl<sub>2</sub>/H<sub>2</sub>O. The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub> then concentrated and the residue purified by flash silica column chromatography to afford the title compound (94).

C. Preparation of compound (95).

- 5           Compound (94) was dissolved in EtOH cooled in an ice bath and reacted with  $\text{NaBH}_4$  (15 eq.) for 3 min. Then added  $\text{CuCl}$  (2 eq) and stirred for 2 h. at room temperature. The mixture was filtered, concentrated and extracted with  $\text{CH}_2\text{Cl}_2$ . Washed with water then brine, dried over  $\text{Na}_2\text{SO}_4$  and concentrated to a mixture of the title compound (95) and the hydroxy compound (96).

D. Preparation of compound (96).

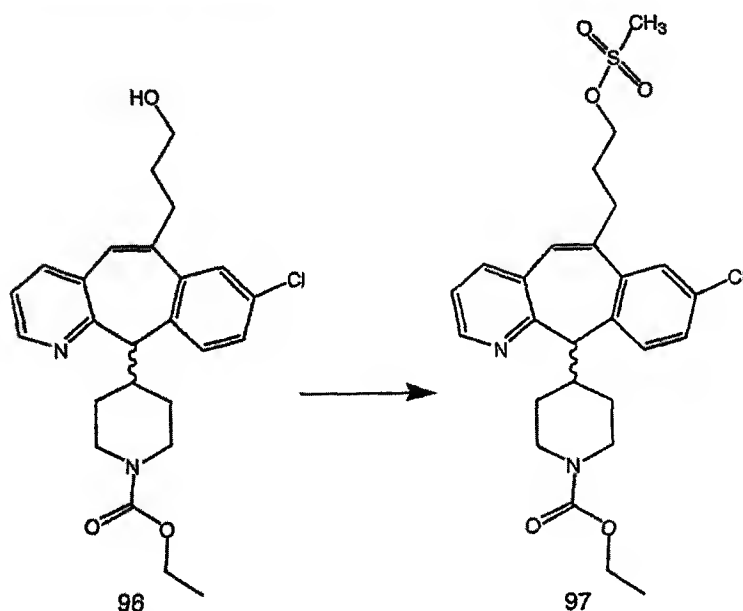

5

Compound (95), was then further reacted with  $\text{LiBH}_4$  (3 eq.) in THF at reflux temperature for 4 h. EtOAc was added and the mixture was washed with  $\text{Na}_2\text{CO}_3$  then dried over  $\text{Na}_2\text{SO}_4$  and concentrated to afford the title compound (96).

10

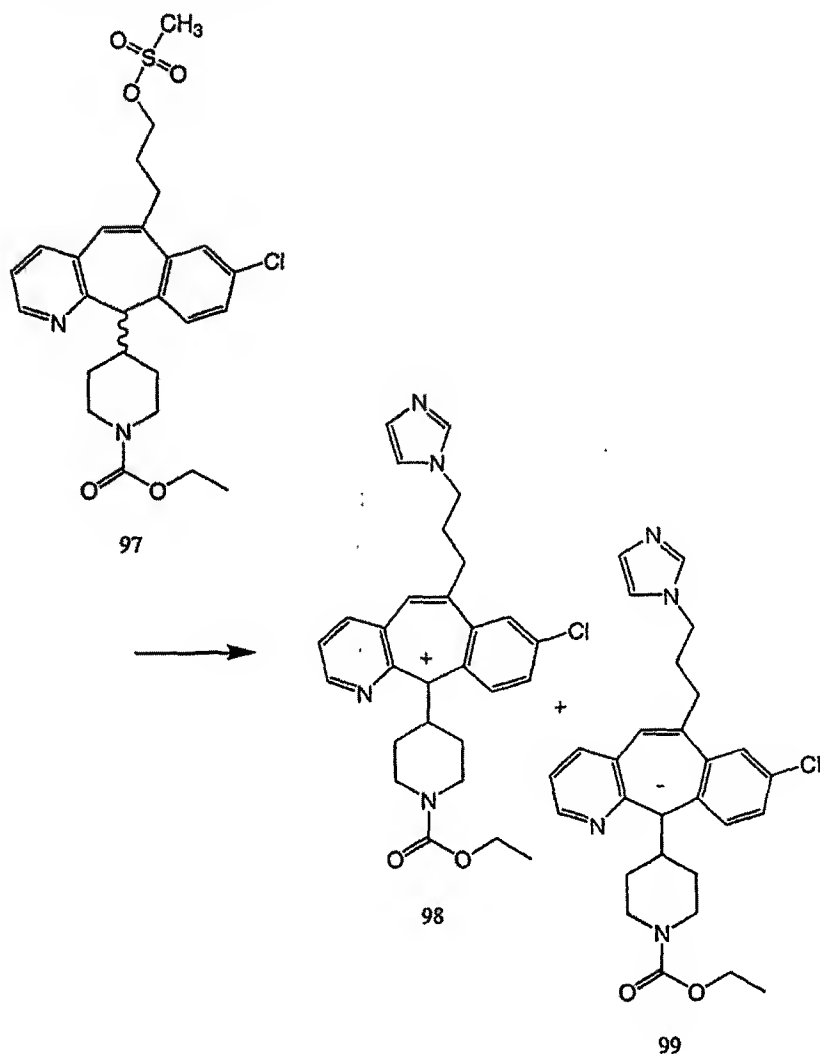

E. Preparation of compound (97).

Dissolved compound (96) in  $\text{CH}_2\text{Cl}_2$ , added  $\text{Et}_3\text{N}$  (3 eq.) followed by methane sulfonylchloride (1.5 eq.). The mixture stirred at room temperature over night then diluted with  $\text{CH}_2\text{Cl}_2$  and washed with  $\text{Na}_2\text{CO}_3$ . Dried over  $\text{NaSO}_4$  and concentrated to afford the title compound (97).

5

F. Compounds (98) and (99).

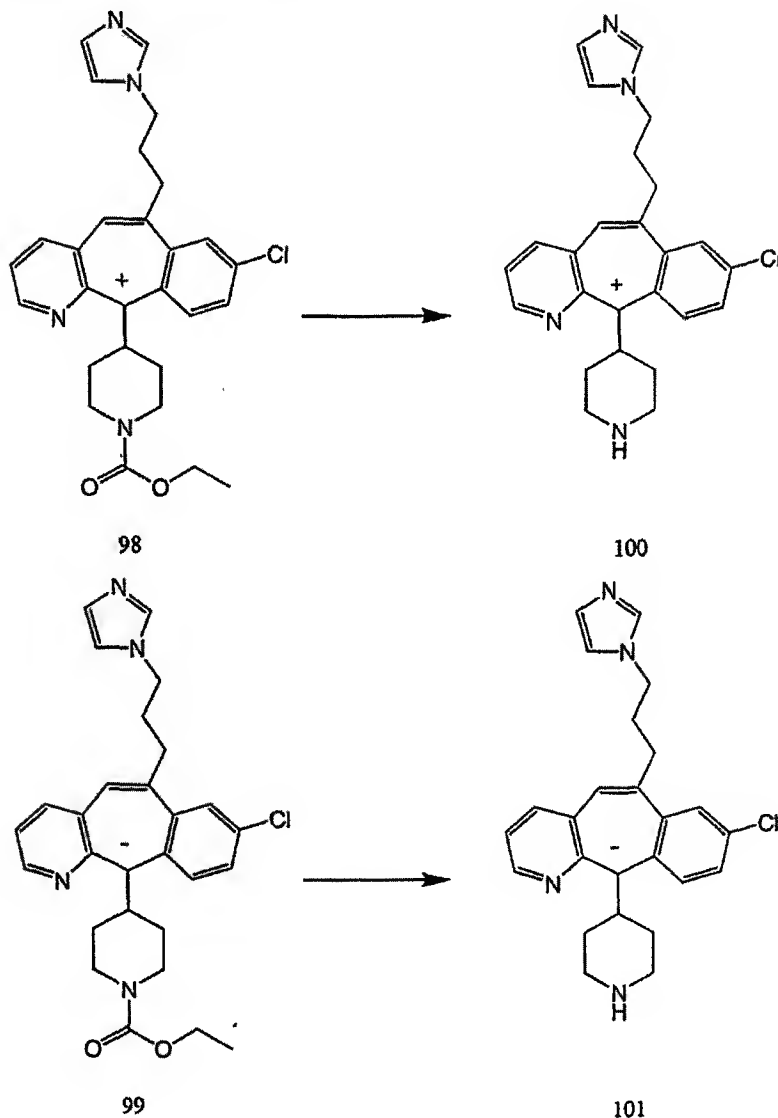

10

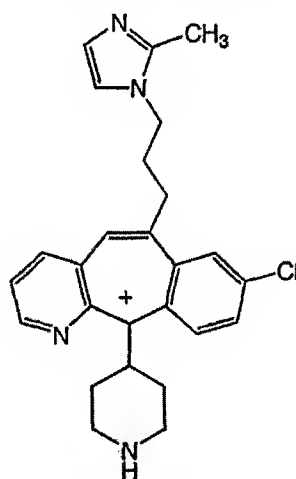

To a solution of sodium imidazole (Aldrich) in DMF was added,  $\text{NaH}$  (2 eq.). Stirred for 15 min. then added compound (97) (from above) (1 eq.) and stirred over night at room temperature. The reaction mixture was concentrated and then extracted with ethyl acetate. Washed with  $\text{Na}_2\text{CO}_3$ , dried over  $\text{NaSO}_4$ , filtered then concentrated.

Crude product was purified by flash silica column chromatography. Further separation of pure (+) enantiomers and pure (-) enantiomers was accomplished on a chiracel AD column affording the title compounds (98) and (99).

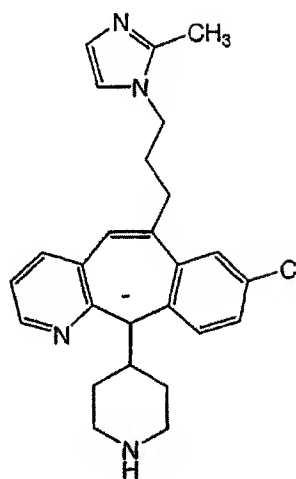

5 G. Compounds (100) and (101).

10 Compounds (98) and (99) were individually hydrolyzed to their free amines by refluxing in conc. HCl for 5 h. The reaction mixtures were separately poured into ice and basified with  $\text{NH}_4\text{OH}$ . The solutions were then extracted with  $\text{CH}_2\text{Cl}_2$ , dried over  $\text{Na}_2\text{SO}_4$ , filtered and concentrated to afford the title compounds (100) and (101).

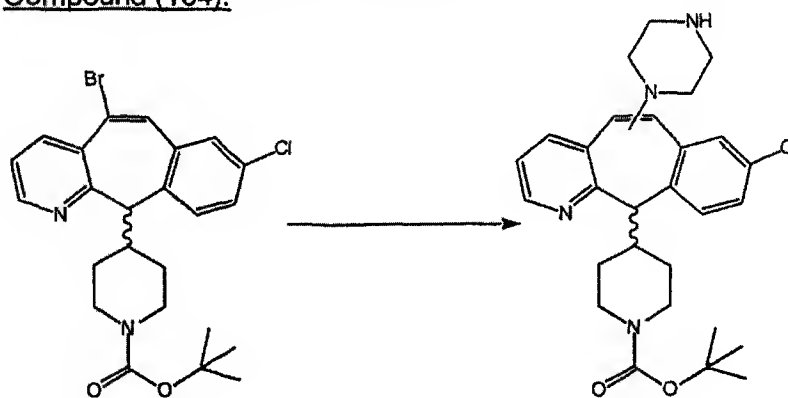

**PREPARATIVE EXAMPLE 8****Preparation of Compounds (102) AND (103).**

102

103

- 5 In a similar manner as described in Preparative Example 7, Steps A-G, substituting 2-methyl imidazole for sodium imidazole, in Step F, the title compounds (102) and (103) were prepared.

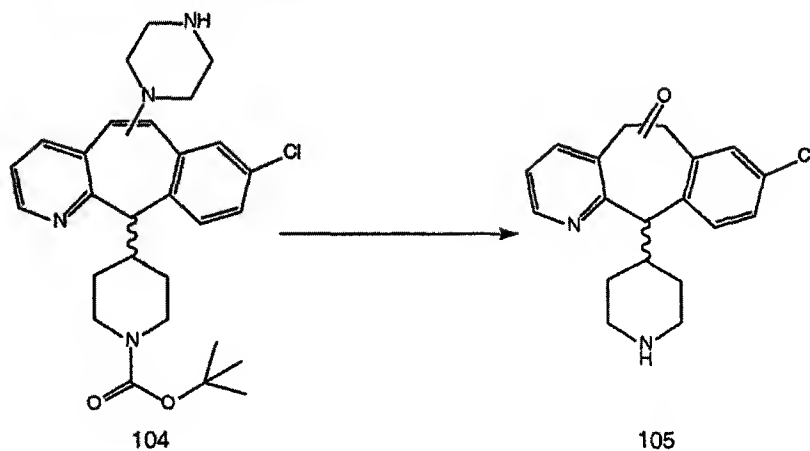

**PREPARATIVE EXAMPLE 9****A. Compound (104).**

23

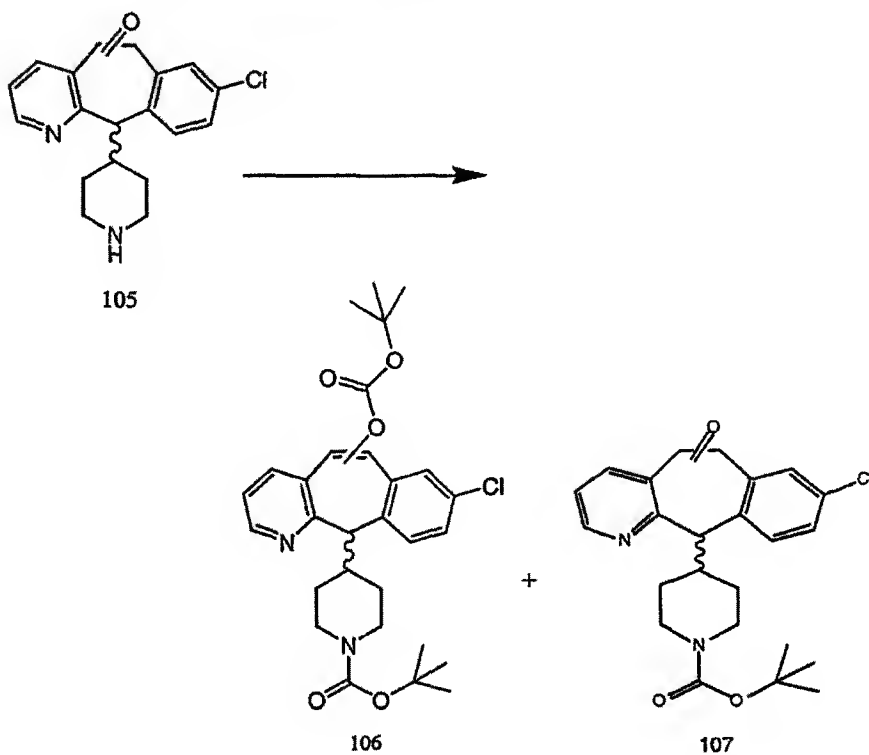

104

10

Compound (23) from Preparative Example 4 was reacted with piperazine in the same manner as described in Preparative Example 1, Step E, affording the title compound (104).

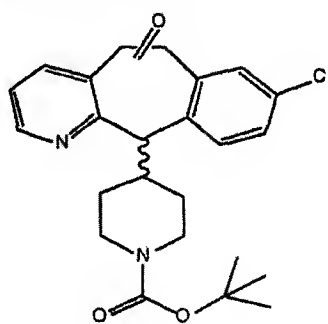

B. Preparation of compound (105).

- 5 Compound (104) from above was hydrolyzed with 6N HCl over night at reflux temperature. The cooled reaction mixture was basified with 50% w/w NaOH and then extracted with 80% THF-EtOAc. The organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to dryness, affording the title compound (105).

10 C. Preparation of Compounds (106) and (107).

Compound (105) was dissolved in 50:1 MeOH:H<sub>2</sub>O then added di-tert-butyl dicarbonate (2 eq.). Adjusted pH to 9 and stirred for 4 h at room temperature. The reaction mixture was concentrated and extracted with CH<sub>2</sub>Cl<sub>2</sub>. The organic layer was washed with Na<sub>2</sub>CO<sub>3</sub>, dried, filtered and concentrated to dryness affording a mixture of title compounds (106) and (107).

D. Preparation of compound (107).

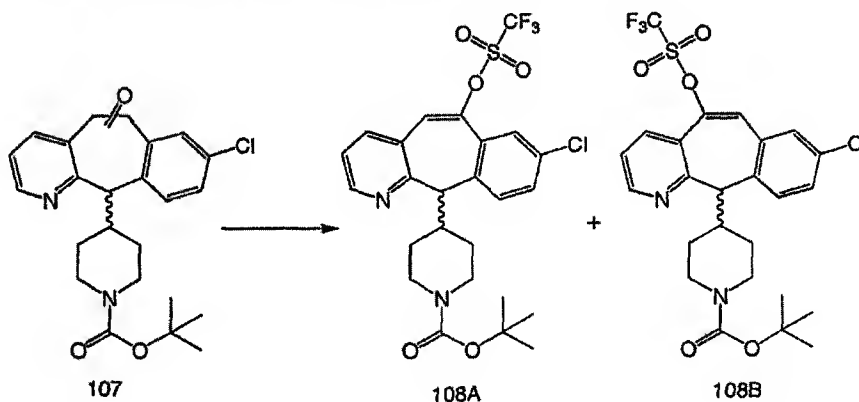

107

10

To the mixture of compounds (106) and (107) from Step C above, in 80% MeOH/H<sub>2</sub>O at room temperature was added, cesium carbonate (2 eq.). The reaction stirred overnight. The mixture was then concentrated, extracted with CH<sub>2</sub>Cl<sub>2</sub>, washed with H<sub>2</sub>O, dried over MgSO<sub>4</sub>, filtered and concentrated to dryness affording the title compound (107).

15

E. Preparation of Compounds (108A & B).

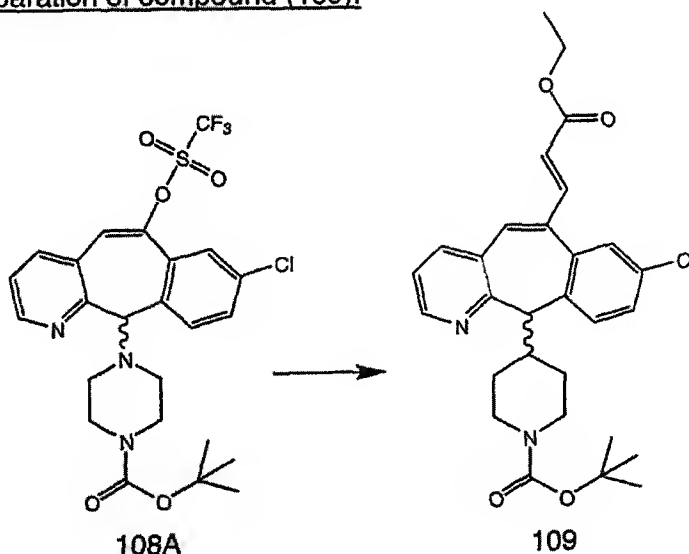

20

Compound (107) was reacted with N-phenyl trifluoromethane sulfonimide in a similar manner as described in Preparative Example 7, Step A, affording the title compound (108A & 108B).

F. Preparation of compound (109).

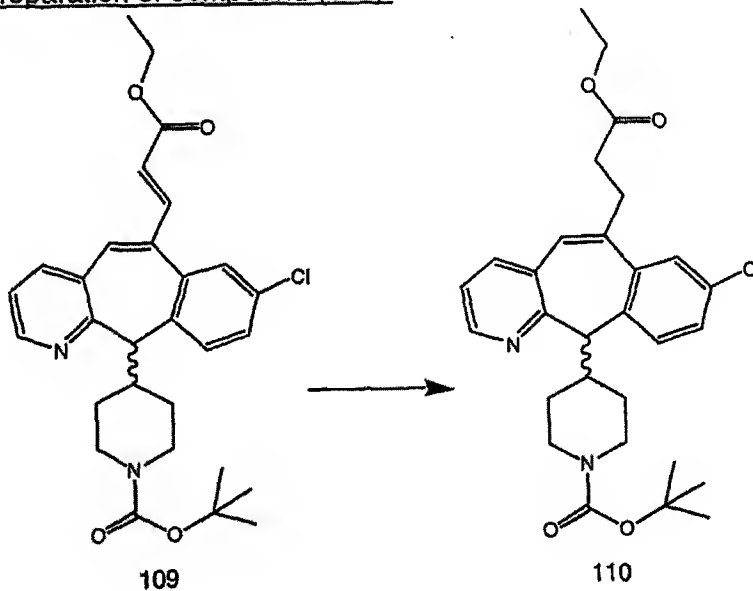

5

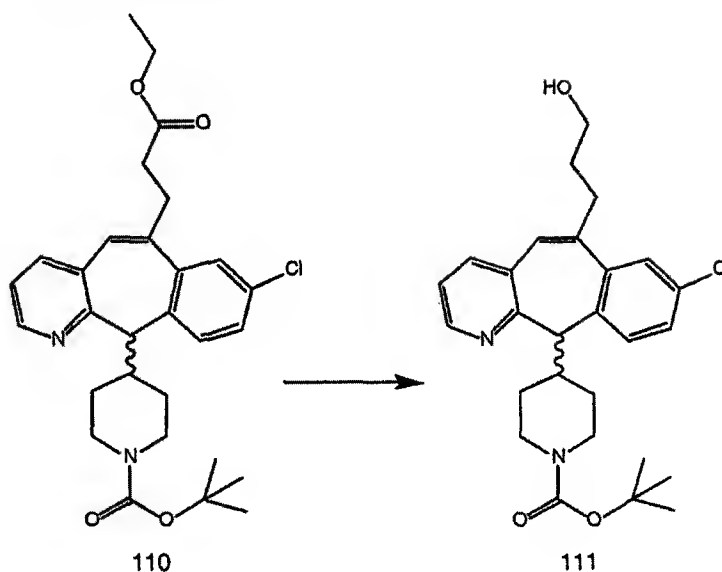

Compound (108A) was reacted with ethyl acrylate in a similar manner as described in Preparative Example 7, Step B affording the title compound (109).

G. Preparation of compound (110).

10

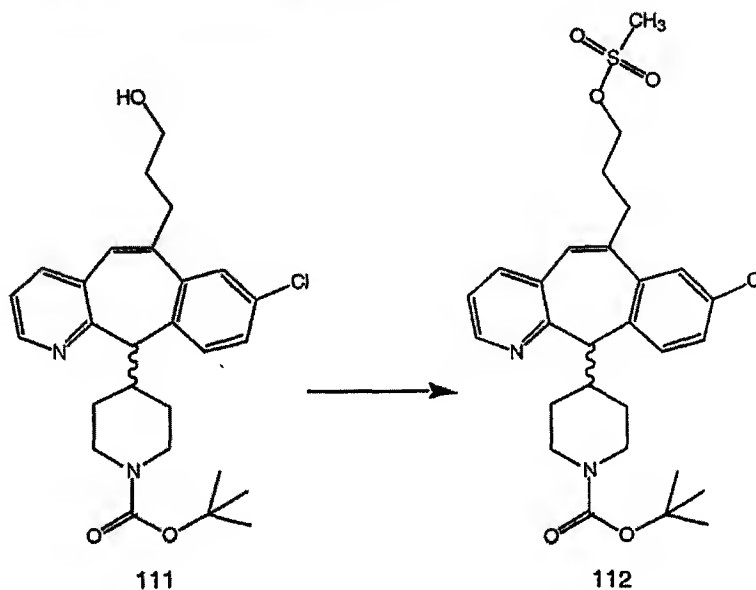

Compound (109) was reacted with  $\text{NaBH}_4$  and  $\text{CuCl}$  in a similar manner as described in Preparative Example 7, Step C affording the title compound (110).

H. Preparation of Compound (111).

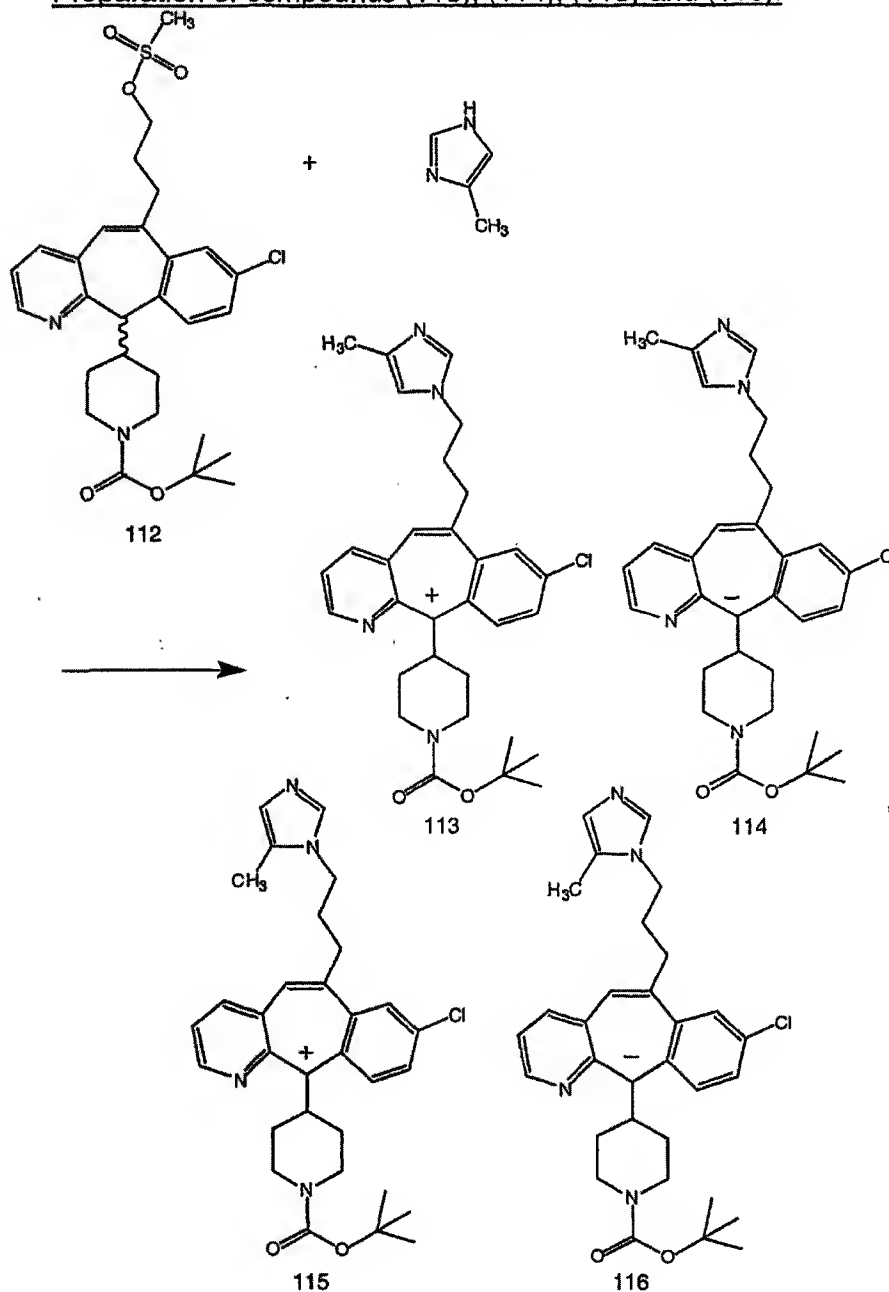

5 Dissolved compound (110) in THF and then added 1 M LiAlH<sub>4</sub>/THF (1 eq.) and stirred for 1.5 h at room temperature. To the mixture was added H<sub>2</sub>O and 15% NaOH then extracted with EtOAc. The reaction was washed with brine, dried over MgSO<sub>4</sub>, filtered and concentrated. Purification by flash silica column chromatography eluting with 20% EtOAc/CH<sub>2</sub>Cl<sub>2</sub> afforded the hydroxy title compound (111).

10

I. Preparation of compound (112).

Compound (111) was reacted with methane sulfonyl chloride in a similar manner as described in Preparative Example 7, Step E affording the title compound (112).

5 J. Preparation of compounds (113), (114), (115) and (116).

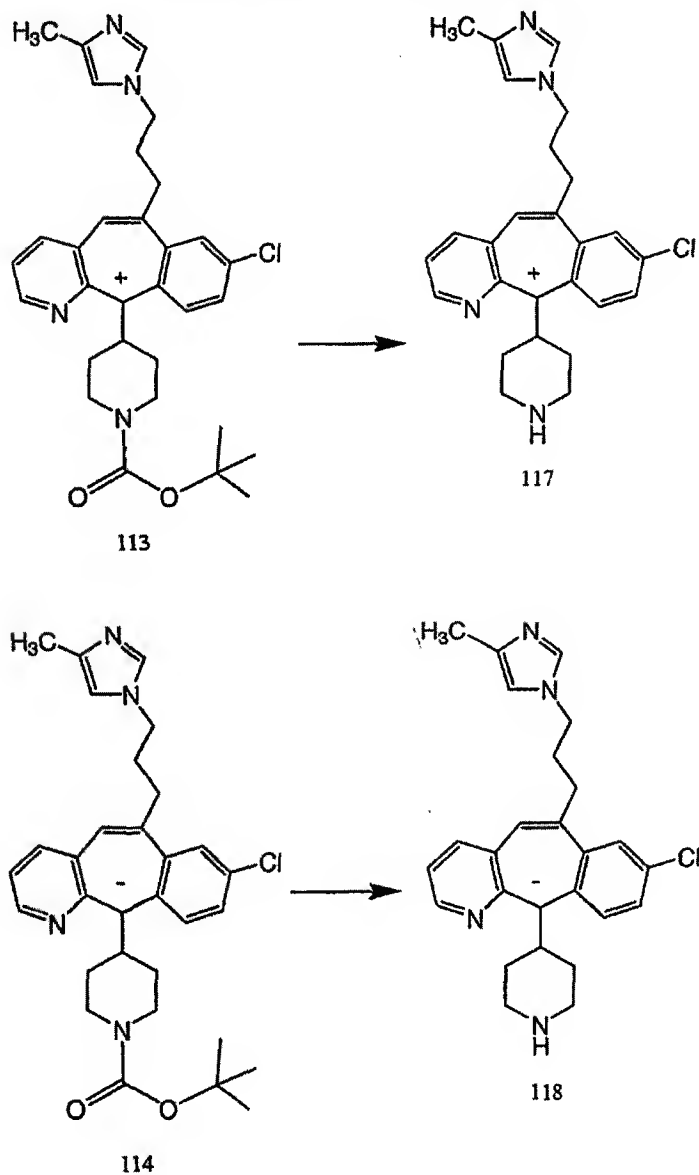

Compound (112) was reacted in a similar manner as Preparative Example 7, Step F substituting 4-methylimidazole for sodium imidazole. A mixture of (+,-)-4 and (+,-)-5-

methyl imidazoles resulted. The mixture was treated in the same manner as described in Example 11 affording pure stereoisomers (113), (114), (115) and (116).

5

K. Preparation of Compounds (117) and (118).

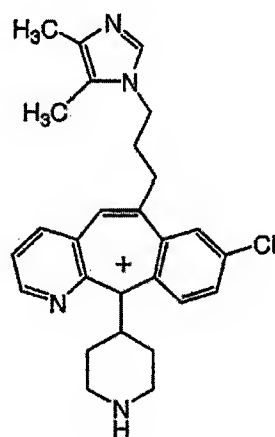

Compounds (113) and (114) were hydrolyzed to their free amines by stirring in HCl/Dioxane for 4 h. The mixtures were then concentrated to dryness affording the title compounds (117) and (118).

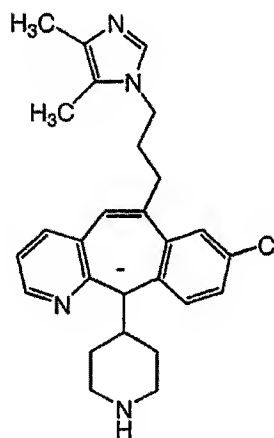

5

PREPARATIVE EXAMPLE 10

Compounds (119) AND (120).

119

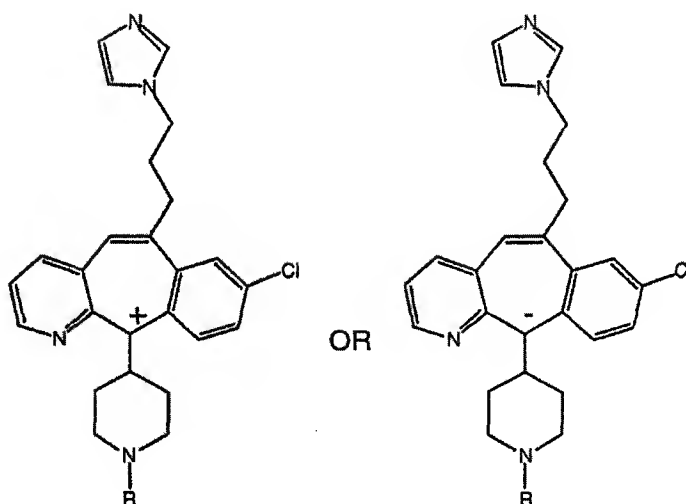

120

- 10 In a similar manner as described in Preparative Example 9, Steps A-K, substituting 4,5-dimethyl imidazole in Step J, the title compounds (119) and (120) were prepared.

EXAMPLE 39-45

- 15 Reacting compounds (100) or (101) from Preparative Example 7, in the same manner as described in Example 13, substituting the appropriate isocyanate or chloroformate, the following compounds were prepared:

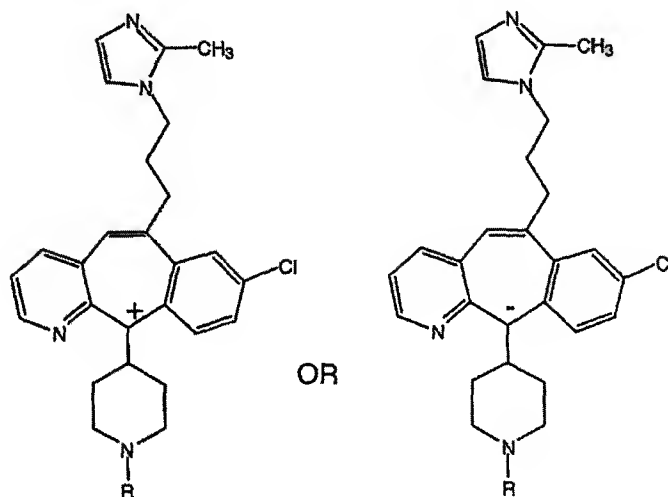

130

Ex	R=	Compound #:
39		(121) AND (122)
40		(123) and (124)
41		(125) AND (126).
42		(127) AND (128).
43		(129) AND (130).
44		(131) AND (132).
45		(133) AND (134).

**EXAMPLE 46-51**

Reacting compounds (102) or (103) from Preparative Example 8, in the same manner as described in Example 13, substituting the appropriate isocyanate or  
 5 chloroformate, the following compounds were prepared:

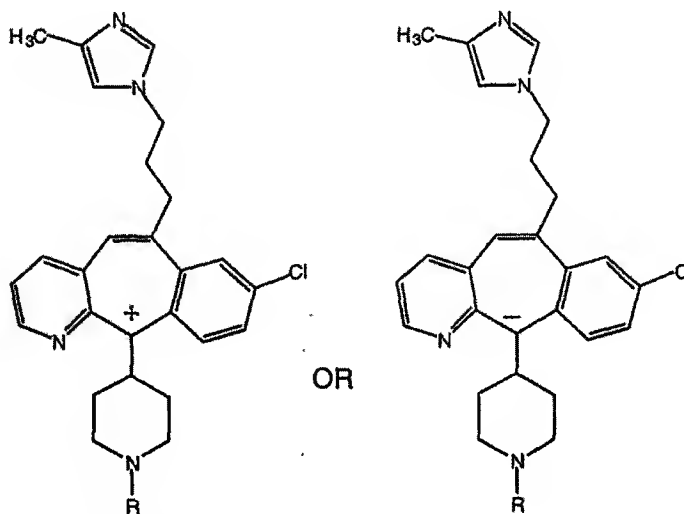

Ex	R=	Compound #:
46		(135) AND (136).
47		(137) AND (138).
48		(139) AND (140).
49		(141) AND (142)
50		(143) AND (144).
51		(145) AND (146).

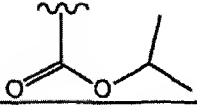

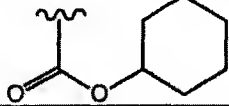

EXAMPLE 52-59

Reacting compounds (117) or (118) from Preparative Example 9, in the same manner as described in Example 13, substituting the appropriate isocyanate, chloroformate or sulfonyl chloride, the following compounds were prepared:

5

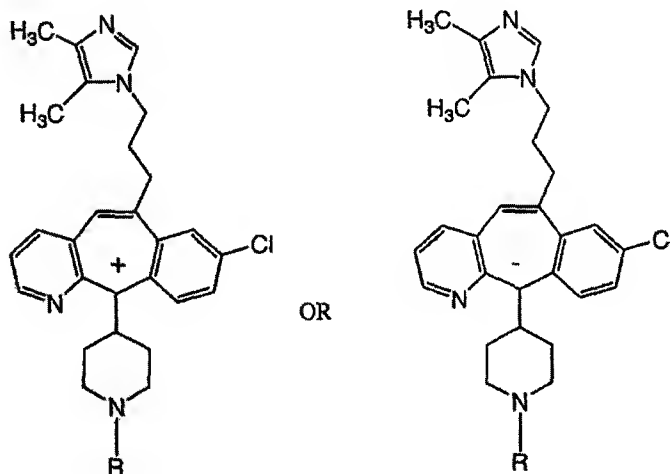

Ex	R=	Compound #:
52		(147) AND (148)
53		(149) and (150)

68		(178) AND (179).
69		(180) AND (181).

PREPARATIVE EXAMPLE 11A. PREPARATION OF COMPOUND (182).

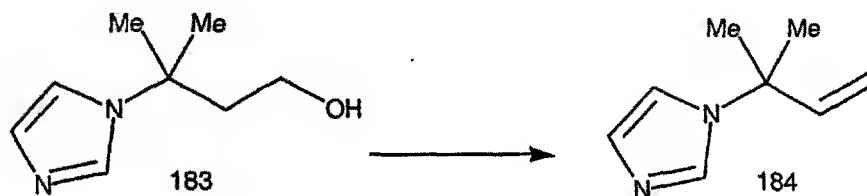

5

Ethyl 2,2-dimethyl acrylate (50.0 g, 2.0 eq.) was stirred with imidazole (13.28 g, 200 mmol) at 90° for 48 hours. The resulting solution was cooled, diluted with 300 mL H<sub>2</sub>O-CH<sub>2</sub>Cl<sub>2</sub> (1:1) and separated. The aqueous layer was extracted with CH<sub>2</sub>Cl<sub>2</sub> (2 x 75 mL) and the combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated in vacuo. The crude mixture was purified by flash chromatography using a 10% MeOH in CH<sub>2</sub>Cl<sub>2</sub> solution as eluent to give pure product as a clear oil. CIMS: MH<sup>+</sup>= 197.

10

B. PREPARATION OF COMPOUND (183).

A solution of the title compound from Preparative Example 11, Step A, (10.0 g, 50.96 mmol) was treated with  $\text{LiAlH}_4$  (51 mL, 1M solution in ether, 1.0 eq.). The reaction mixture was stirred one hour before quenching by the dropwise addition of saturated  $\text{Na}_2\text{SO}_4$  (~3.0 mL). The resulting slurry was dried with  $\text{Na}_2\text{SO}_4$  (solid), diluted with EtOAc (100 mL) and filtered through a plug of Celite. The filtrate was concentrated to give crude product which was used without further purification. CIMS:  $\text{MH}^+ = 155$ .

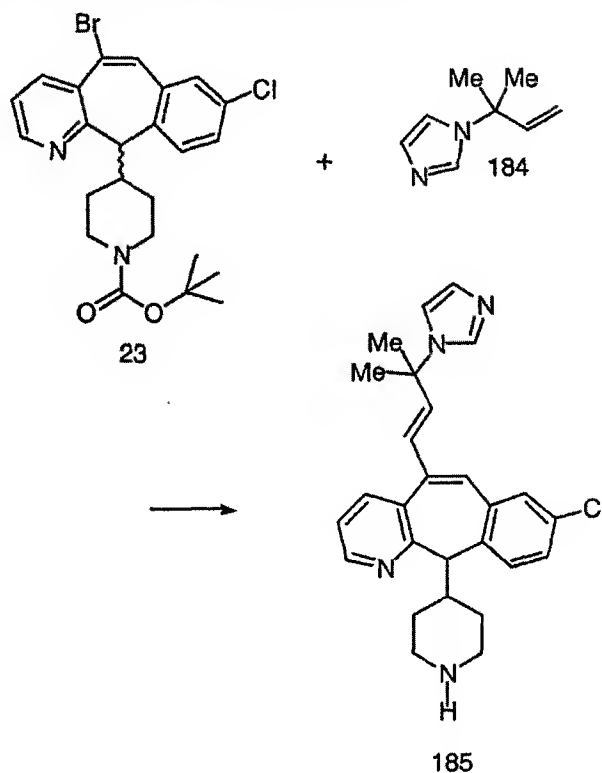

C. PREPARATION OF COMPOUND (184).

Iodine (3.83 g, 1.2 eq.) was added to a solution of  $\text{Ph}_3\text{P}$  (3.95 g, 1.2 eq.) and imidazole (1.02 g, 1.2 eq.) in  $\text{CH}_2\text{Cl}_2$  (30 mL) portionwise over 15 minutes followed by a solution of the title compound from Preparative Example 11, Step B, (3.83 g, 12.56 mmol) in  $\text{CH}_2\text{Cl}_2$  (10 mL). The resulting solution was stirred one hour before concentrating in vacuo. The residue was dissolved in THF (100 mL), treated with  $\text{KOt-Bu}$  (4.51g, 3.2 eq.) and stirred at room temperature over night. The reaction mixture was diluted with water (100 mL) and  $\text{CH}_2\text{Cl}_2$  (100 mL), separated, and the aqueous layer extracted with  $\text{CH}_2\text{Cl}_2$  (2 X 50 mL). The combined organics were dried over  $\text{Na}_2\text{SO}_4$ , filtered, and concentrated under reduced pressure. The product was

purified by flash chromatography using neat EtOAc then 5% MeOH in EtOAc as eluent to give a pale yellow oil (184).

CIMS: MH<sup>+</sup> = 137.

5 D. PREPARATION OF COMPOUND (185).

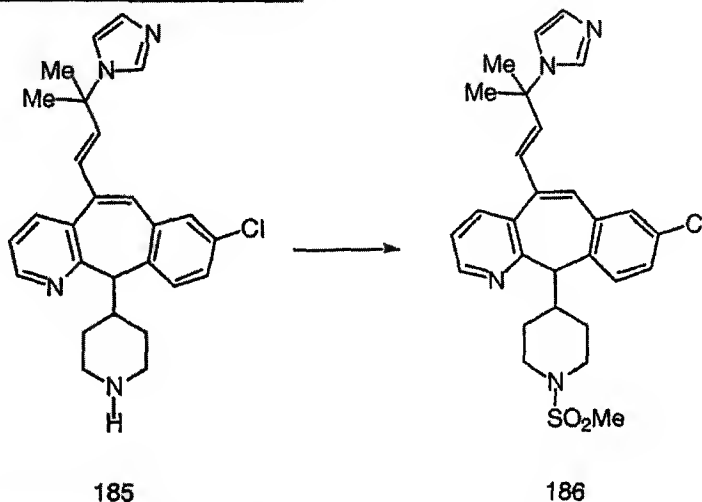

Pd(OAc)<sub>2</sub> (0.023 g, 10 mol%) was added to a solution of the title compound  
 (184) from Preparative Example 11, Step C, (0.30 g, 2.0 eq.) , compound (23)(0.50 g,  
 1.02 mmol), Bu<sub>4</sub>NBr (0.66 g, 2.0 eq.), TEA (2.84 mL, 20.eq.) and K<sub>2</sub>CO<sub>3</sub> (0.70 g, 5.0  
 eq) in DMF (10 mL). The resulting solution was heated to 100 °C for 48 hours, cooled  
 to room temperature, and concentrated under reduced pressure. The residue was  
 diluted with water (50 mL) and CH<sub>2</sub>Cl<sub>2</sub> (50 mL), separated, and the aqueous layer  
 extracted with CH<sub>2</sub>Cl<sub>2</sub> (2 X 25 mL). The combined organic layer was dried over  
 Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated *in vacuo*. The crude product was purified by flash  
 column chromatography using an 8% MeOH in CH<sub>2</sub>Cl<sub>2</sub> solution as eluent to yield a 4 :  
 1 mixture of the compound (184) and coupled product (185). This mixture (0.27 g)  
 was stirred in CH<sub>2</sub>Cl<sub>2</sub> : TFA (7.0 mL, 5 : 2) for 1.5 hours. The crude product was  
 concentrated under reduced pressure, neutralized with NaOH (1N), and extracted with

CH<sub>2</sub>Cl<sub>2</sub> (3 X 20 mL). The combined organics were dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated *in vacuo*. The crude residue was purified by flash chromatography using a 15% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent to give the title compound (185) as a tan solid. LCMS: MH<sup>+</sup>= 445.

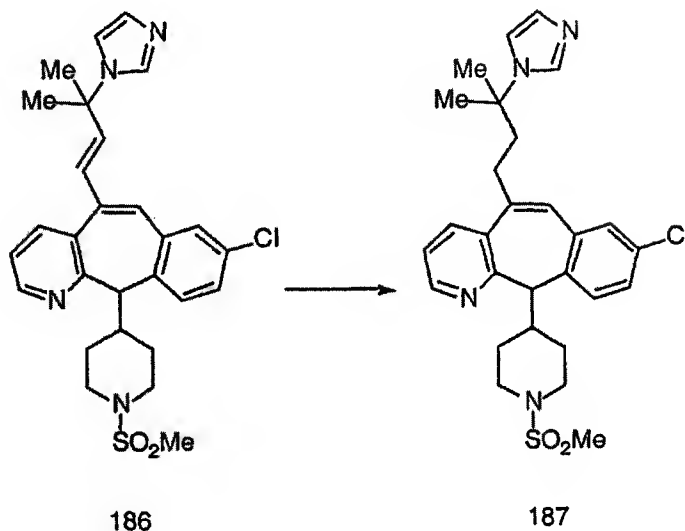

5

**EXAMPLE 70.**

### Preparation of Compound (186).

10 Methanesulfonyl chloride (0.005 mL, 1.3 eq) was added to a solution of Compound (185) from Preparative Example 11, Step D (0.02 g, 0.045 mmol) and TEA (0.010 mL, 1.5 eq.) in CH<sub>2</sub>Cl<sub>2</sub> (1 mL). The resulting solution was stirred 12 hours at room temperature and diluted with saturated NaHCO<sub>3</sub> (5 mL), separated, and the aqueous layer extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 X 10 mL). The combined organic layer was  
15 dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated *in vacuo*. The crude product was purified by flash chromatography using an 8% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent to give the title compound (186) as a tan solid mp 124-129 °C; LCMS: MH<sup>+</sup>= 523.

**EXAMPLE 71****Preparation of Compound (187).**

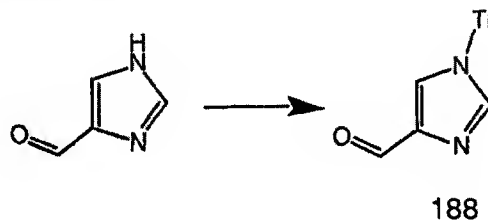

5

pTosNHNH<sub>2</sub> (0.085 g, 3 eq) was added to a solution of compound (186) from Example 70 (0.08 g, 0.0153 mmol) and DBU (0.11 mL, 5.0 eq.) in toluene (5 mL) and the resulting solution was heated to reflux. Subsequently, every 2 hours over 6 hours the solution was cooled and additional pTosNHNH<sub>2</sub> (3.0 eq) added and the solution heated to reflux. After heating at reflux 2 hours following the final addition the solution was cooled, diluted with CH<sub>2</sub>Cl<sub>2</sub> (25 mL) and washed with saturated NaHCO<sub>3</sub> (3 X 20 mL). The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated under reduced pressure. The crude reaction mixture was purified by flash column chromatography using a 5% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent to give the title compound (187) as a tan solid. mp 112-116 °C; LCMS: MH<sup>+</sup>= 525.

15

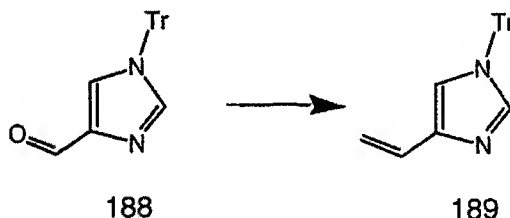

**PREPARATIVE EXAMPLE 12****A. PREPARATION OF COMPOUND (188).**

20

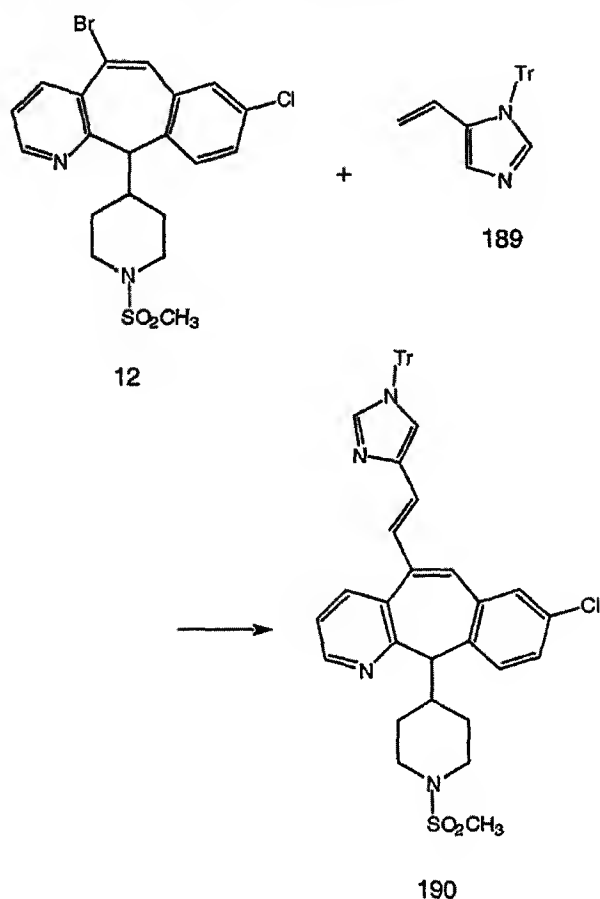

Literature compound 1H-imidazole-4-carbaldehyde was tritylated according to the literature procedure Kelley, et al.; J. Med. Chem 20(5), (1977), 721 affording the title compound (188).

5            B.    PREPARATION OF COMPOUND (189).

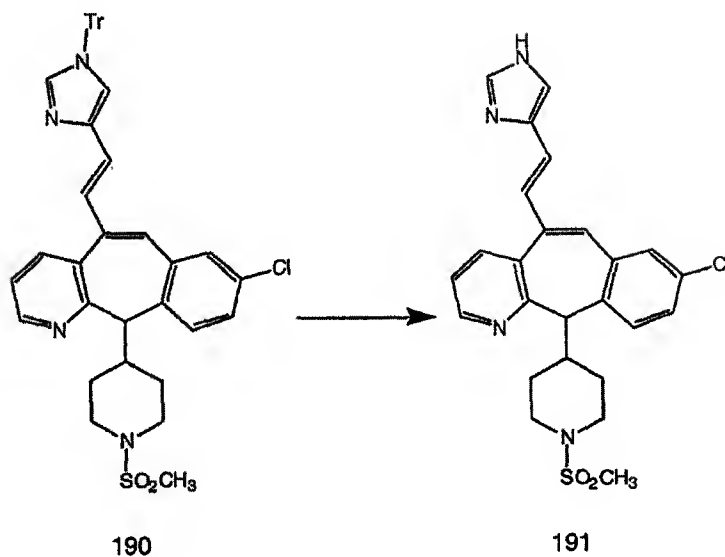

nBuLi (2.00 mL, 2.2 eq; 1.7M In hexanes) was added dropwise to Ph<sub>3</sub>PCH<sub>3</sub>Br (1.4 g, 2.3 eq) in THF (10 mL). The resulting orange solution was stirred 30 minutes at room temperature before cooling to -78 °C and adding the trityl protected 1(3)H-imidazole-4-carbaldehyde (0.50 g, 1.48 mmol) in THF (7.0 mL). The resulting solution was warmed slowly to room temperature and stirred overnight. The reaction was quenched by the addition of water (20 mL) and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 X 20 mL). The combined organics were dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated in vacuo. The crude product was purified by flash chromatography using a 45% hexanes in EtOAc solution as eluent to yield the title compound (189) as a white solid.

C. PREPARATION OF COMPOUND (190).

- 5 Pd(OAc)<sub>2</sub> (0.021 g, 0.10 eq.) was added to a solution of compound (12) from Preparative Example 2, Step B (0.44 g, 0.95 mmol), compound (189) from Preparative Example 12, Step B (0.32 g, 1.0 eq.), Bu<sub>4</sub>NBr (0.61 g, 2.0 eq.), and K<sub>2</sub>CO<sub>3</sub> (0.66 g, 5.0 eq.) in DMF (8.0 mL). The resulting solution was heated to 100 °C over night, cooled, and concentrated under reduced pressure. The residue was diluted with water (50 mL) and CH<sub>2</sub>Cl<sub>2</sub> (50 mL), separated, and the aqueous layer extracted with CH<sub>2</sub>Cl<sub>2</sub> (2 X 50 mL). The combined organics were dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated *in vacuo*. The crude product was purified by flash chromatography using 100% EtOAc as eluent. LCMS: 723 (MH<sup>+</sup>).
- 10

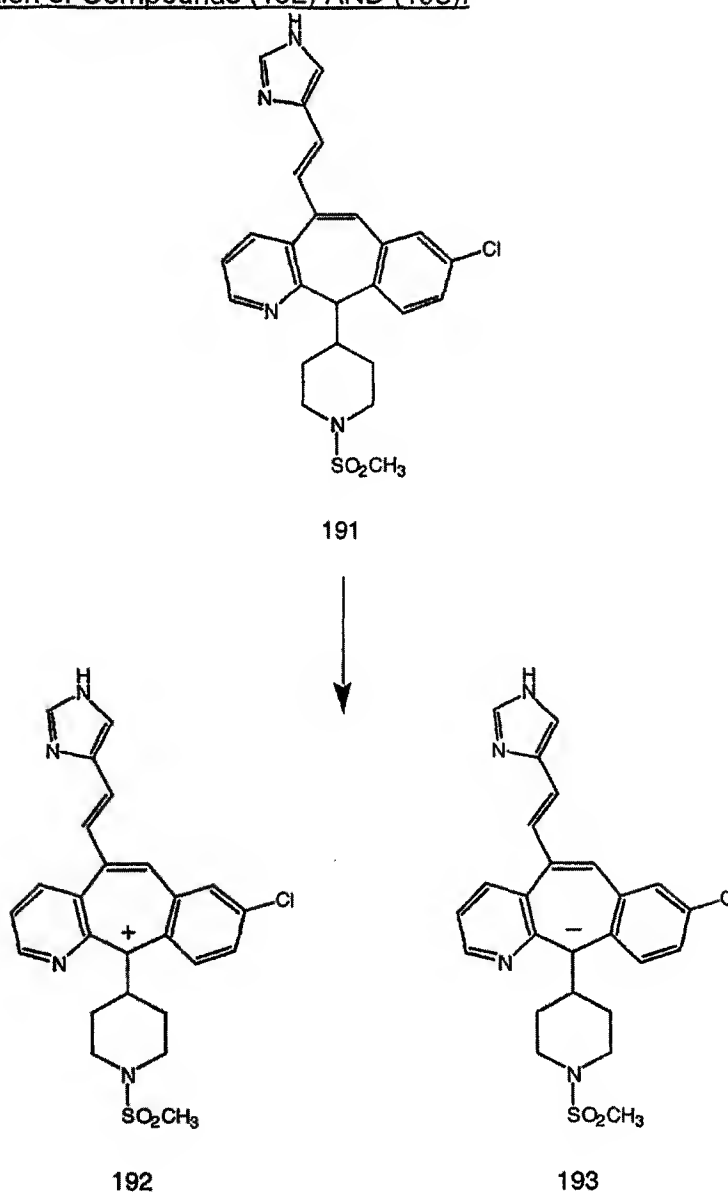

EXAMPLE 72Preparation of Compound (191).

5

To a solution of the title compound from Preparative Example 12, Step C (1.43  
10 g, 1.97 mmol) in water (70 mL) was added AcOH (70 mL). The resulting solution was  
heated at reflux two hours, cooled to room temperature and neutralized by the  
dropwise addition of 50% (w/w) NaOH. The solution was then extracted with CH<sub>2</sub>Cl<sub>2</sub>  
(3 X 200 mL) and the combine organics were dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated  
under reduced pressure. The crude product was purified by flash chromatography  
15 using a 10% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent. mp= 190 °C (dec.);  
LCMS: MH<sup>+</sup>= 483.

**EXAMPLE 73**  
**Separation of Compounds (192) AND (193).**

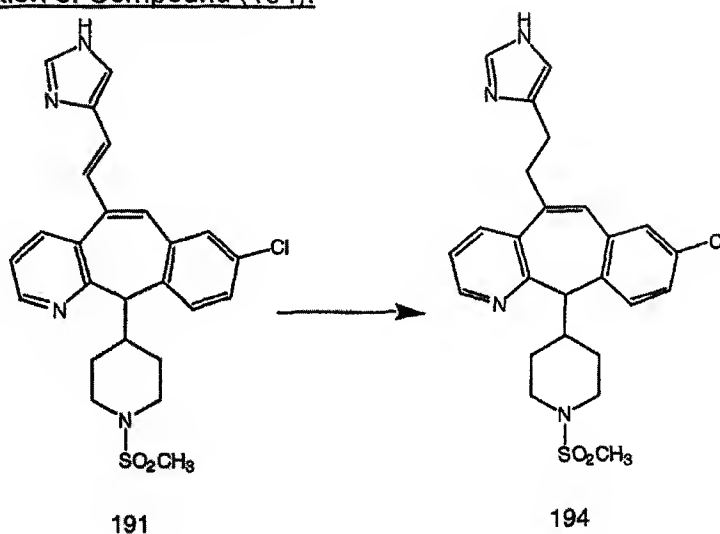

5

The title compound (191) from Example 72 was separated into individual (+)- and (-)- enantiomers by preparative HPLC using a ChiralPak AD column eluting with 70 : 30 hexanes : iPrOH containing 0.2% diethylamine as eluent.

10 Compound (192): FABMS:  $MH^+ = 481$ ; mp=109-112 °C;  $[\alpha]_D^{20} = +398^\circ$  (2.0 mg in 2.0 mL MeOH).

Compound (193): FABMS:  $MH^+ = 481$ ; mp= 126-129 °C;  $[\alpha]_D^{20} = -367^\circ$  (2.0 mg in 2.0 mL MeOH).

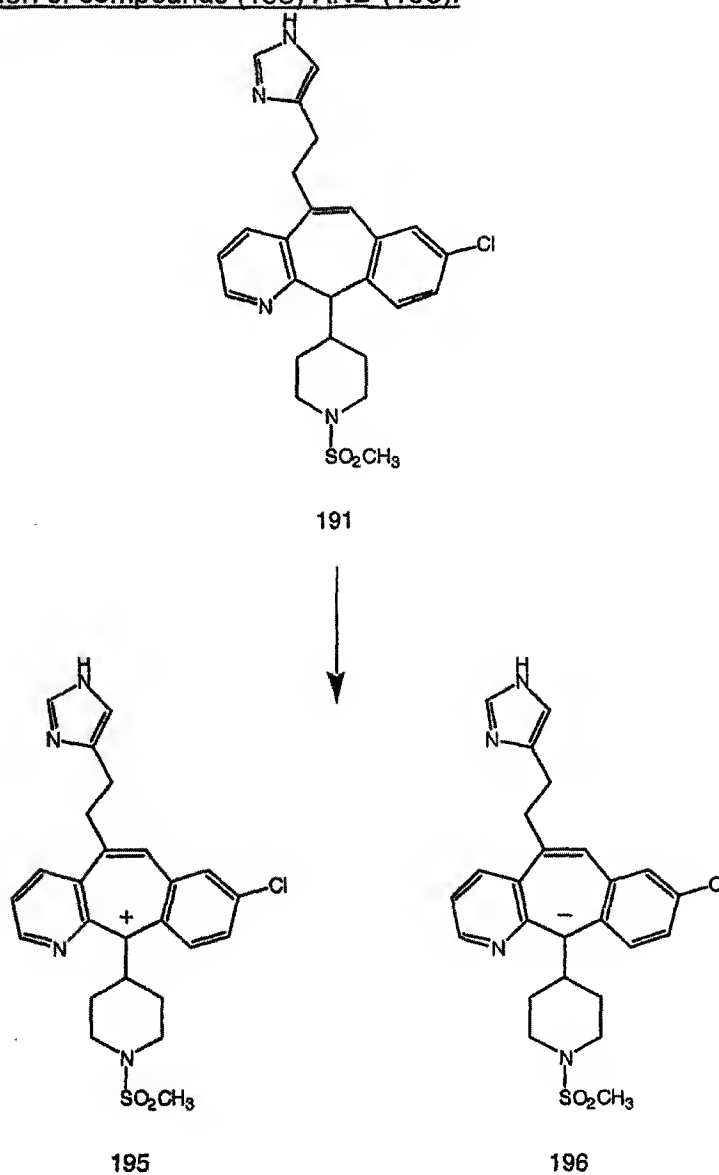

EXAMPLE 74Preparation of Compound (194).

5

The title compound (191) from Example 72 was dissolved in toluene (50 mL) and DBU (0.26 mL, 5.0 eq.) and pTosNHNH<sub>2</sub> (0.33g, 3.3 eq.) were added. The resulting solution was heated to reflux 2.5 hours before cooling to room temperature and adding additional pTosNHNH<sub>2</sub> (0.33g, 3.3 eq.). The reaction mixture was heated at reflux for an additional 2 hours and cooling to room temperature. The resulting solution was diluted with saturated NaHCO<sub>3</sub> (100 mL) and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 X 100 mL). The combined organics were washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated *in vacuo*. The crude product was purified by flash chromatography using a 5% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent to give pure product (194). mp=158-162; LCMS: MH<sup>+</sup>=483.

15

**EXAMPLE 75**  
**Separation of compounds (195) AND (196).**

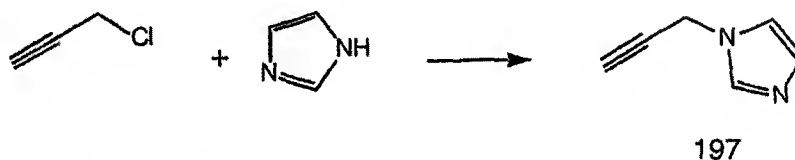

5

In a similar manner as described in Example 73 above, the following enantiomers were separated:

10 Compound (195): LCMS:  $MH^+ = 483$ ; mp= 129-131 °C;  $[\alpha]_D^{20} = +134^\circ$  (2.0 mg in 2.0 mL MeOH).

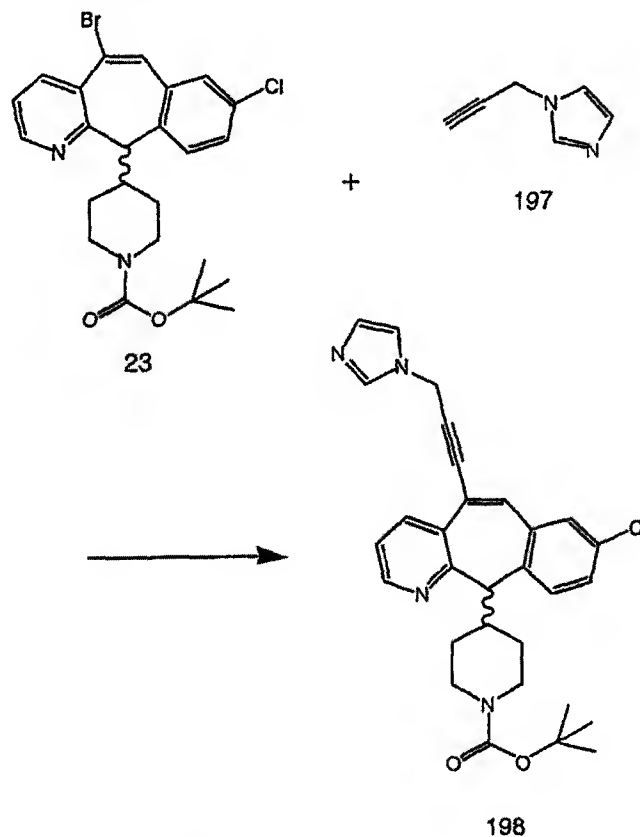

Compound (196): LCMS:  $MH^+ = 483$ ; mp= 125-126 °C;  $[\alpha]_D^{20} = -105^\circ$  (2.0 mg in 2.0 mL MeOH).

PREPARATIVE EXAMPLE 13Preparation of Compound (197).

Imidazole (2.50g, 36.72 mmol) and basic alumina (15 g) were combined and shaken 15 minutes before adding propargyl chloride (2.66 mL, 1.0eq.). The resulting mixture was stirred 84 hours and suspended in EtOAc. The slurry was filtered and the  
10 filtrate was washed with H<sub>2</sub>O and brine and dried over Na<sub>2</sub>SO<sub>4</sub>. The solution was filtered and concentrated under reduced pressure to give a clear oil.

EXAMPLE 76Preparation of Compound (198).

15

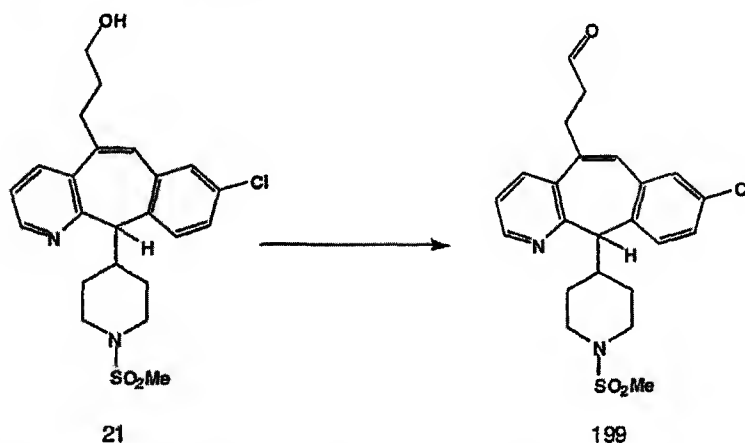

A solution of compound (23) (0.50g, 1.02 mmol) and compound (197) from Preparative Example 13 (0.22g, 2.0 eq.) in TEA (3.0 mL) and pyridine (0.5 mL) was

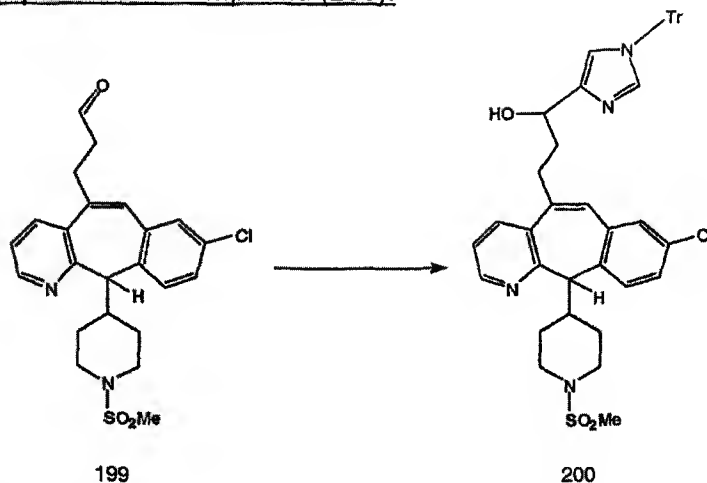

deoxygenated 15 minutes before adding  $\text{PdCl}_2(\text{PPh}_3)_2$  (0.018g, 2.5 mol%) and  $\text{CuI}$  (0.002g, 1.0 mol%). The resulting solution was heated for 48 hours. The reaction mixture was cooled to room temperature, diluted with  $\text{H}_2\text{O}$ , and extracted with  $\text{CH}_2\text{Cl}_2$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , filtered, and concentrated. The crude product was purified by flash chromatography using an 8%  $\text{MeOH}$  in  $\text{CH}_2\text{Cl}_2$  solution as eluent. mp 109-112 °C; LCMS: 515 ( $\text{MH}^+$ ).

#### PREPARATIVE EXAMPLE 14

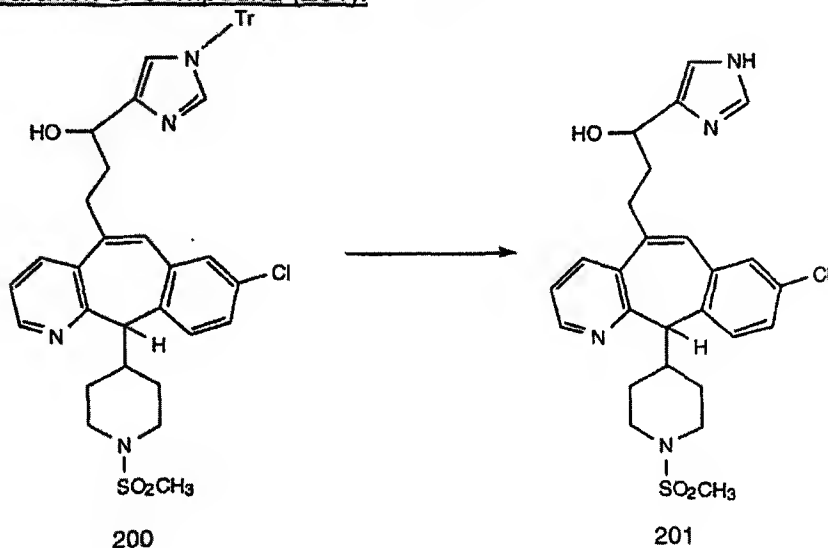

##### A. Preparation of Compound (199).

Compound (21) from Preparative Example 3, Step C, (2.83 g, 6.37 mmol) was dissolved in 120 ml of dichloromethane and 0.16 ml of de-ionized water. Dess-Martin periodinane (3.85 g, 9 mmol) was added as a solid at ambient temperature and the reaction mixture stirred for 4 hours. Then added a 20%  $\text{Na}_2\text{S}_2\text{O}_3$  solution (50 ml) and stirred for 15 minutes. The layers were separated and the dichloromethane layer washed with saturated  $\text{NaHCO}_3$ , dried over magnesium sulfate, filtered and evaporated to obtain the title product (199). FABMS: 445 ( $\text{MH}^+$ ).

B. Preparation of Compound (200).

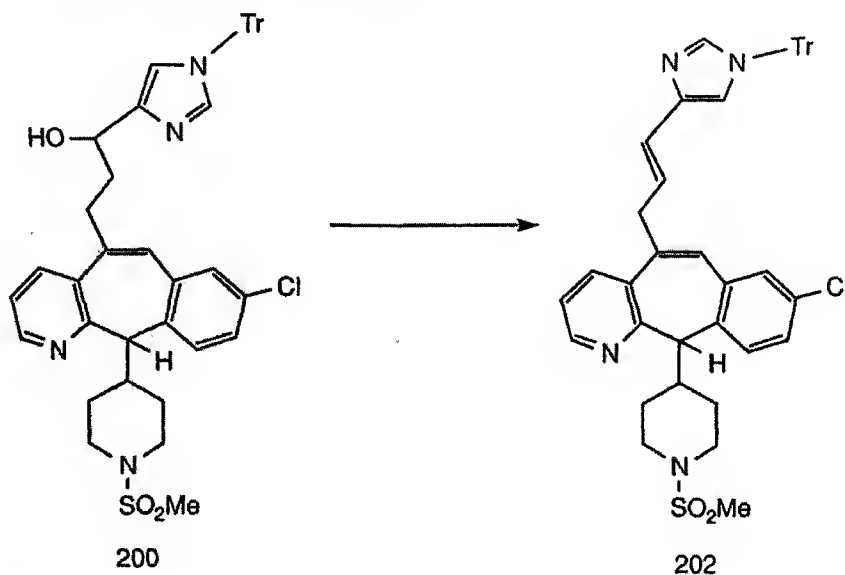

4-Iodo-1-trityl-imidazole (prepared according to the literature procedure Kirk,  
 5 Kenneth L.;J. Heterocycl. Chem.; EN; 22; 1985; 57-59) (0.48 g, 1.1 mmol) was  
 dissolved in 5 ml of dichloromethane under a dry nitrogen atmosphere.  
 Ethylmagnesium bromide (0.36 ml) was added and the reaction mixture stirred. After  
 30 minutes compound (199) (0.44 g, 1 mmol) was dissolved in 5 ml of  
 dichloromethane and added to the reaction mixture while stirring. After stirring 4  
 10 hours at ambient temperature, the mixture was washed with saturated ammonium  
 chloride solution, dried over magnesium sulfate, filtered, and evaporated to give a  
 solid residue. The product was chromatographed on a flash silica gel column using  
 ethyl acetate as the eluent to obtain the title compound (200). FABMS: 756 (MH<sup>+</sup>).

EXAMPLE 77.15 Preparation of Compound (201).

Compound (200) (0.6 gm) was dissolved in 10 ml of trifluoroacetic acid and stirred at ambient temperature. After 7 hours the reaction mixture was evaporated to dryness under vacuum and chromatographed on silica gel using 5% 2N methanol:ammonia/ dichloromethane to obtain title compound (201). FABMS: 514 (MH<sup>+</sup>).

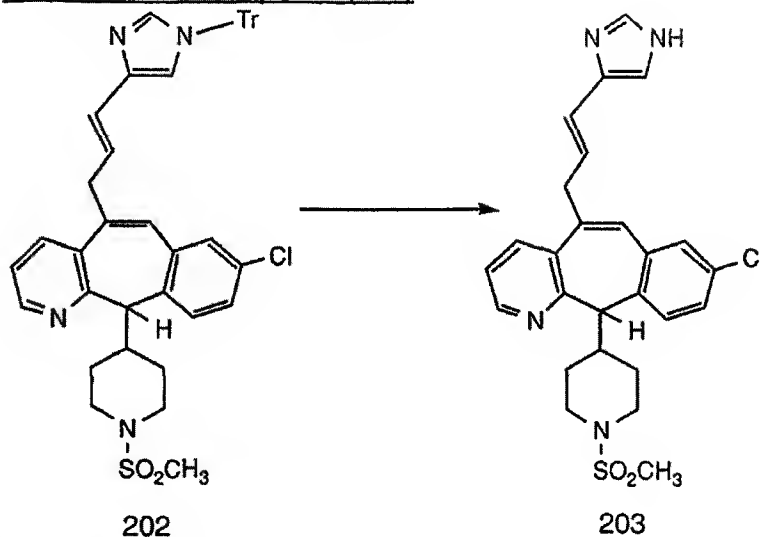

#### PREPARATIVE EXAMPLE 15

##### A. Preparation of Compounds (202).

Compound (200) (0.5 g, 0.66 mmol) was dissolved in 5 ml of dichloromethane. Triethylamine (0.14 ml, 0.99 mmol) and methanesulfonyl chloride (0.062 ml, 0.79 mmol) were added and the reaction mixture stirred for 18 hours. The reaction mixture was added to brine and extracted with dichloromethane three times. Dried over magnesium sulfate, filtered and concentrated to dryness under vacuum to give a residue which was chromatographed on silica gel using ethyl acetate as the eluent to obtain the title compound (202). FABMS: 537 (MH<sup>+</sup>).

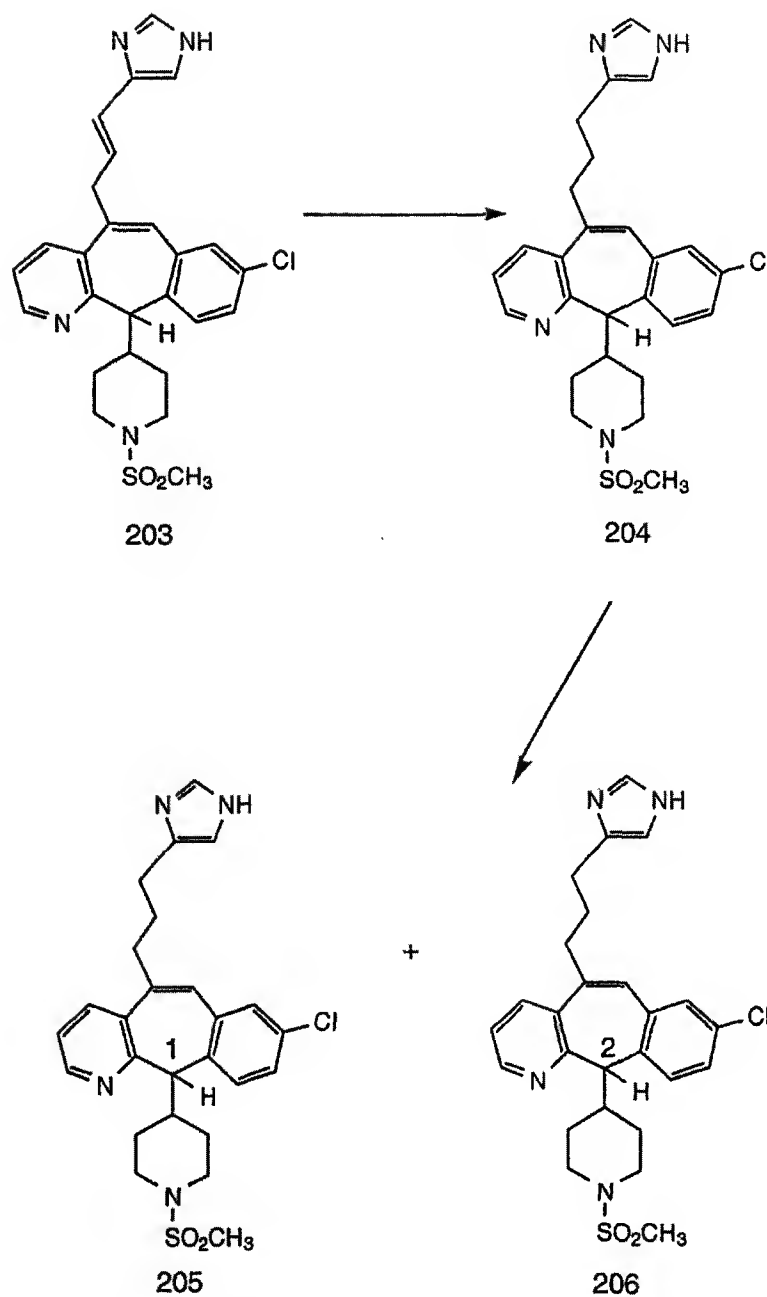

15

B. Preparation of Compound (203)

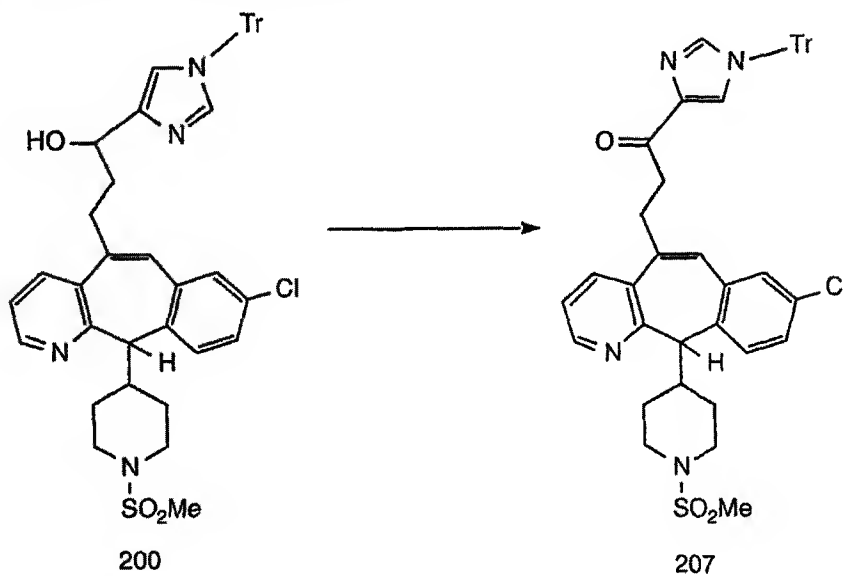

Compound (202) was detritylated in the same manner as EXAMPLE 77  
5 affording the title compound (203). FABMS: 495 (MH<sup>+</sup>).

EXAMPLE 78Preparation of Compounds (205, 206)

150

Compound (203) (77 mg) was hydrogenated over  $\text{PtO}_2$  in ethanol at atmospheric hydrogen for 24 hours. After filtration of the catalyst followed by  
5 evaporation of the ethanol and chromatography on a Chiral Technologies<sup>®</sup> AD HPLC column the title product was obtained as two pure enantiomers (205) and (206).  
FABMS: 497 ( $\text{MH}^+$ ).

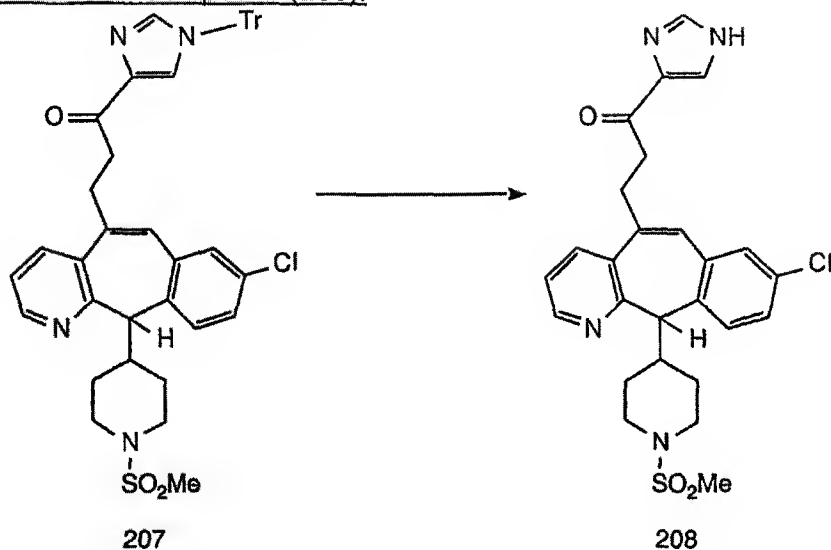

PREPARATIVE EXAMPLE 16Preparation of Compound (207).

5

Compound (200) (0.15 g, 0.198 mmol) was dissolved in 4 ml of dichloromethane and 5  $\mu$ L of de-ionized water. Dess-Martin periodinane (0.12 g, 0.3 mmol) was added and the reaction mixture stirred for 4 h. 5 ml of a 20%  $\text{Na}_2\text{S}_2\text{O}_3$  solution was added and the reaction mixture stirred for another 15 minutes. The layers were separated and the dichloromethane layer was washed with saturated  $\text{NaHCO}_3$ , dried over magnesium sulfate, filtered and evaporated to obtain the title compound (207). FABMS: 753 ( $\text{MH}^+$ ).

15

EXAMPLE 79

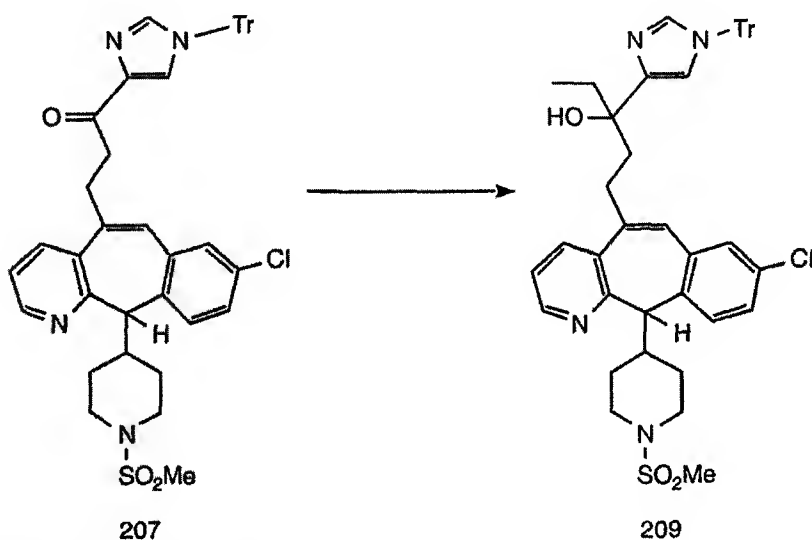

Preparation of Compound (208).

5

Compound (207) was detritylated in the same manner as Example 77 affording the title compound (208). FABMS: 511 (MH<sup>+</sup>).

PREPARATIVE EXAMPLE 17

10

Preparation of Compound (209).

15

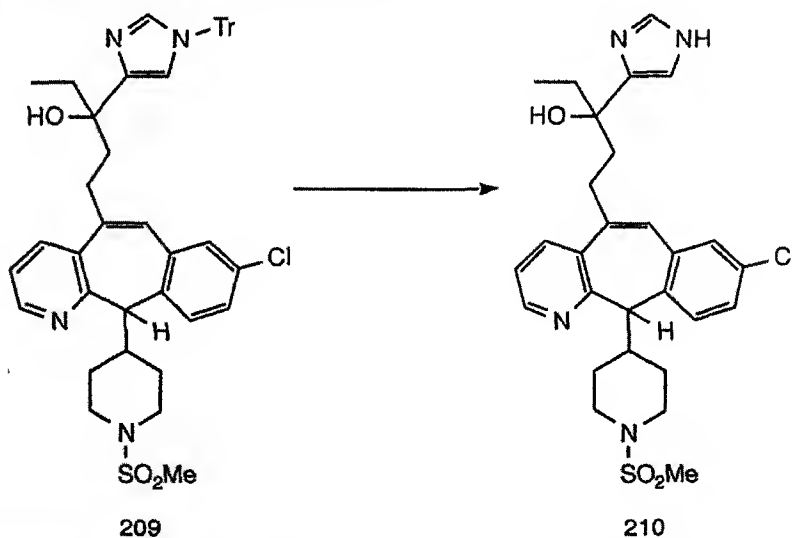

Compound (207) (0.15 g, 0.2 mmol) was dissolved in 5 ml of tetrahydrofuran. Ethylmagnesium bromide (0.1 ml, 3 M in ether) was added at ambient temperature and stirred under a dry nitrogen atmosphere. After 2 hours, added another portion of

ethylmagnesium bromide (0.1 ml, 3 M in ether). After 4 hours the reaction mixture was washed with saturated ammonium chloride, dried over magnesium sulfate, filtered and evaporated to obtain the title compound (209). The product was further purified by flash silica column chromatography eluting with 50% ethylacetate/hexanes.

5 FABMS: 783 ( $MH^+$ ).

#### EXAMPLE 80

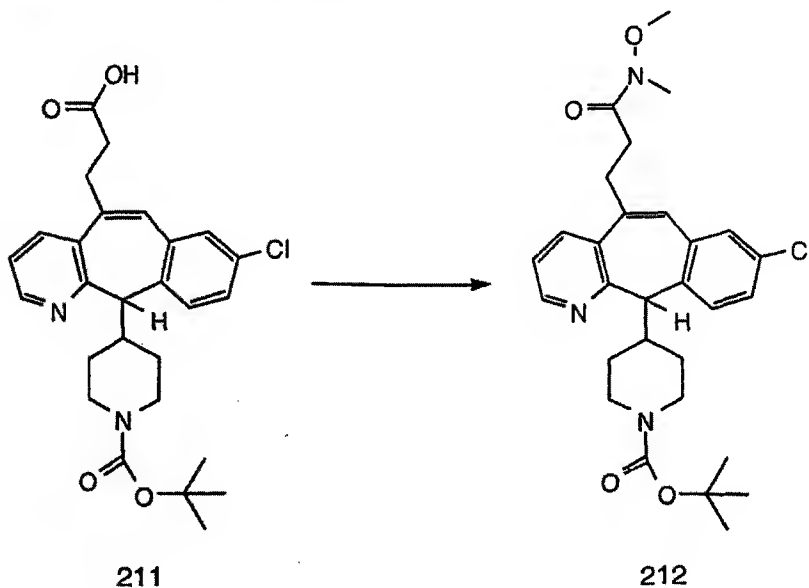

##### Preparation of Compound (210).

Compound (209) was detritylated in the same manner as Example 77 affording  
10 the title compound (210). FABMS: 541 ( $MH^+$ ).

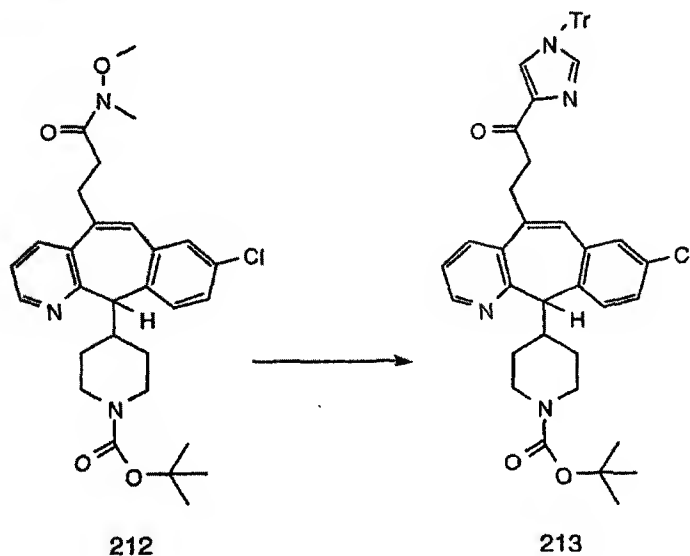

#### PREPARATIVE EXAMPLE 18

##### A. Preparation of Compound (212).

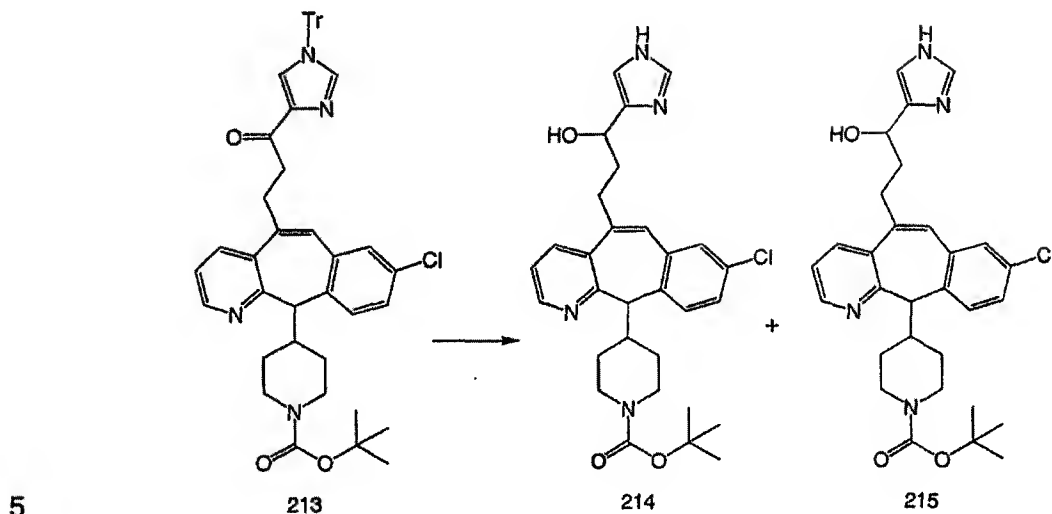

Compound (211) ( 14 g, 29 mmol) prepared by NaOH hydrolysis of Compound (20) from Preparative Example 3, Step B, was dissolved in 400 ml of DMF. 1-(3-dimethylamino propyl)-3-ethylcarbodiimide hydrochloride (8.3 g, 43 mmol), 1-hydroxybenzotriazole (5.9 g, 43 mmol), triethylamine (40 ml), and N,O-dimethylhydroxylamine hydrochloride ( 3.8 g, 40 mmol) were added and the reaction mixture stirred at room temperature under a dry nitrogen atmosphere. After 24 hours the reaction mixture was poured into brine and the product extracted with ethylacetate two times. After drying over magnesium sulfate, filtration, and chromatography on silica gel using 10% ethyl acetate/hexanes the title compound (212) was obtained.

B. Preparation of Compound (213).

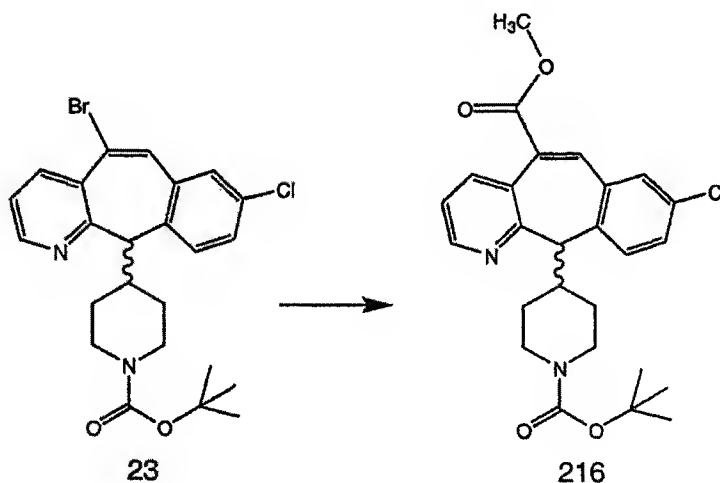

Compound (212) (0.53 g, 1.01 mmol) was treated as in PREPARATIVE Example 14, Step B to obtain the title compound (213) after silica gel chromatography.

**EXAMPLE 81****Preparation of Compounds (214) and (215).**

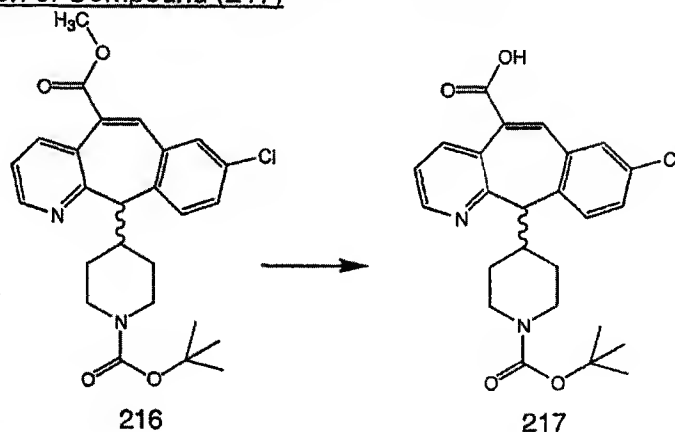

Compound (213) (300 mg, 0.387 mmol) was dissolved in methanol and sodium  
 10 borohydride (50 mg) was added portionwise while stirring. After 1 hour the mixture  
 was added to 1N HCl followed by the addition of 1 N NaOH and extracted with  
 ethylacetate to obtain a crude product which was treated with neat trifluoroacetic acid  
 for 5 hrs, and evaporated to dryness. The mixture was dissolved in methanol and  
 reacted with di-tert.butylidicarbonate (0.2 gm) while maintaining the pH at 10 with 1N  
 15 NaOH for 1 hour. The mixture was then treated with 2N Methanolic ammonia for 15  
 minutes followed by evaporation of the solvents and chromatography on silica gel.  
 Further separation of isomers was accomplished on a Chiral Technologies® AD HPLC  
 column obtaining the pure Isomers. (214) and (215). FABMS M+1=535

EXAMPLE 82Preparation of Compounds (216)

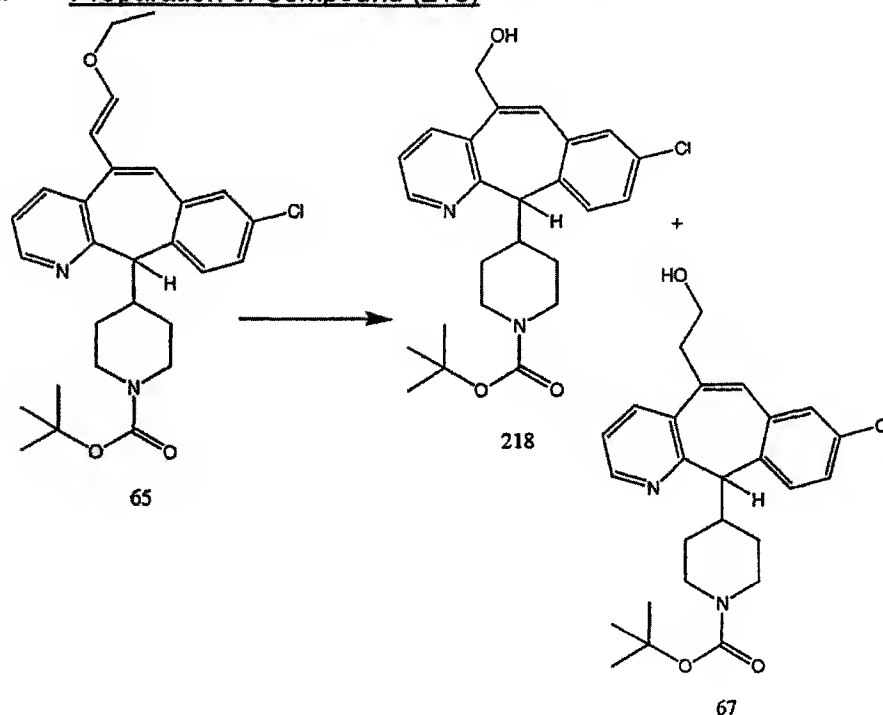

5

Compound (23) from Preparative Example 4, Step A (25.47 gm, 52 mmol) was dissolved in 300 ml of dry toluene and 39.5 ml of methanol. Palladium chloride (0.92 gm), triphenylphosphine (6.887 gm) and DBU ( 10.5 ml) were added and the reaction mixture transferred to a pressure reaction vessel. The reaction vessel was purged with carbon monoxide and then pressurized to 100 psi with carbon monoxide and the mixture stirred at 80 °C for 5 hours. The reaction was cooled in an ice bath and purged with nitrogen 3-4 times. The reaction mixture was transferred to a separatory funnel and 500 ml of ethylacetate was added. The mixture was washed with water three times, dried over magnesium sulfate, filtered and evaporated to dryness under vacuum to give a dark brown gum. The gum was purified by column chromatography on silica gel using 12.5%-25% ethylacetate/hexanes to obtain 12.58 gm of pure title product (216) FABMS: 469 (MH<sup>+</sup>) and 9.16 gm of a mixture of two compounds.

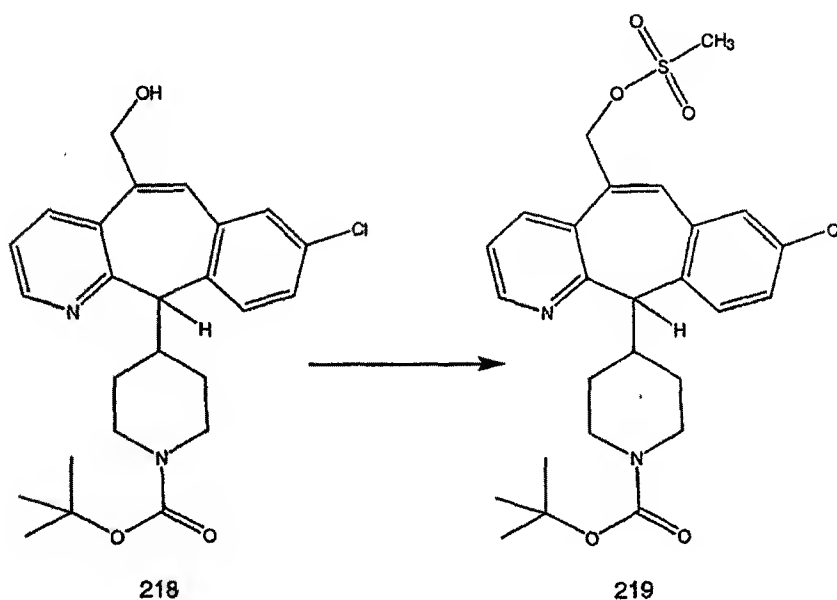

**PREPARATIVE EXAMPLE 19****Preparation of Compound (217)**

- 5 Compound (216) from Example 82 (5.16 gm, 11 mmol) was dissolved in methanol (150 ml). 10% lithium hydroxide (2.9 ml) was added along with dioxane (50 ml) and the reaction stirred for 4 hours. Added an additional portion of 10% lithium hydroxide (5.7 ml) and the reaction stirred for 18 hours. The reaction mixture was concentrated to a small volume and diluted with 50 ml of water. The mixture was
- 10 acidified to pH=3 with 10% citric acid and the product extracted with dichloromethane to obtain the title compound (217). FABMS: 455 (MH<sup>+</sup>)

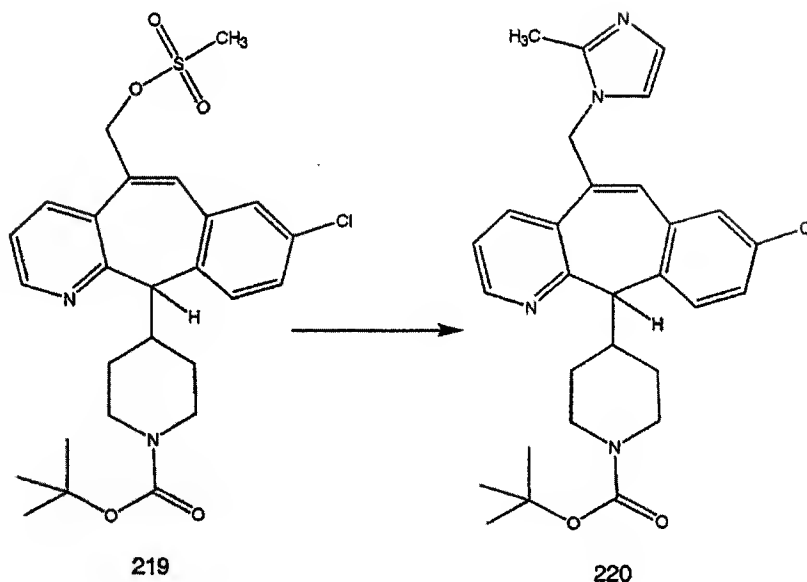

**PREPARATIVE EXAMPLE 20****A. Preparation of Compound (218)**

Compound (65) from Preparative Example (6), Step B, was let stand for approximately two weeks at room temperature, after which time the presence of some aldehyde was observed by NMR of the crude material. This material was then treated as in Preparative Example 6, Steps C and D to afford a mixture of Compounds (218) and (67). The crude mixture was separated on flash silica column chromatography eluting with 1:1 – 3:1 ethyl acetate:hexanes to afford pure Compound (218).

B. Preparation of Compound (219)

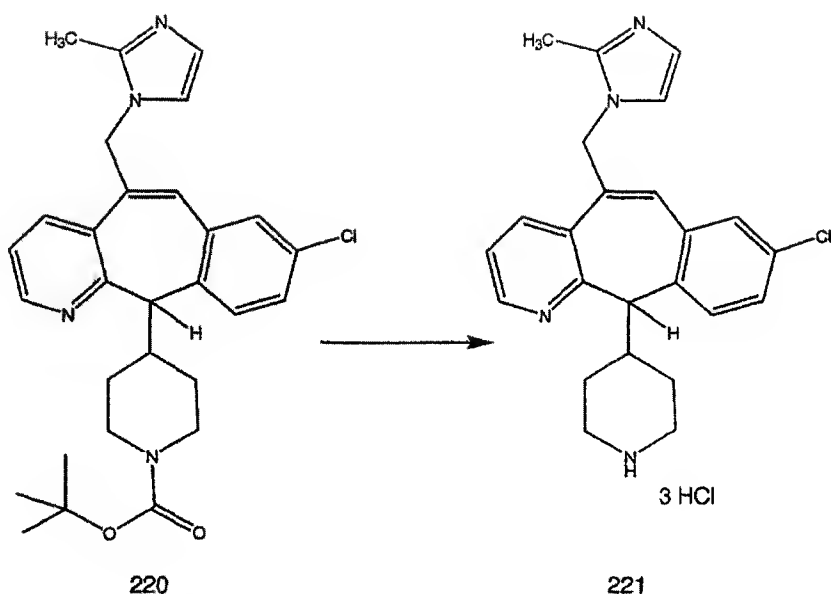

Compound (218) from Step A above, was combined with triethylamine (64.4 ml; .462 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (4 ml) treated with methyl sulfonyl chloride (17.93 ml; .231 mmol) and let stir over night at room temperature. The reaction mixture was diluted with CH<sub>2</sub>Cl<sub>2</sub> (70 ml), quenched with brine (25 ml) and extracted. The organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to give an off-white solid (219) (93 mg; 100%).

C. Preparation of Compound (220)

- 5        Compound (219) from Step B above, was taken up in DMF. To this solution was added a previously reacted solution of 2-methyl imidazole (145.27 mg; 1.734 mmol) and NaH (60%) (69.4 mg; 1.734 mmol) in DMF. The reaction mixture was allowed to stir at room temperature for two hours. The DMF was removed and the residue taken up in  $\text{CH}_2\text{Cl}_2$  quenched with sat. aqueous  $\text{NaHCO}_3$  and extracted with 2
- 10 x 100 ml  $\text{CH}_2\text{Cl}_2$ . The organic layers were combined and purified by preparative TLC plates to give an off-white solid. (220)

D. Preparation of Compound (221)

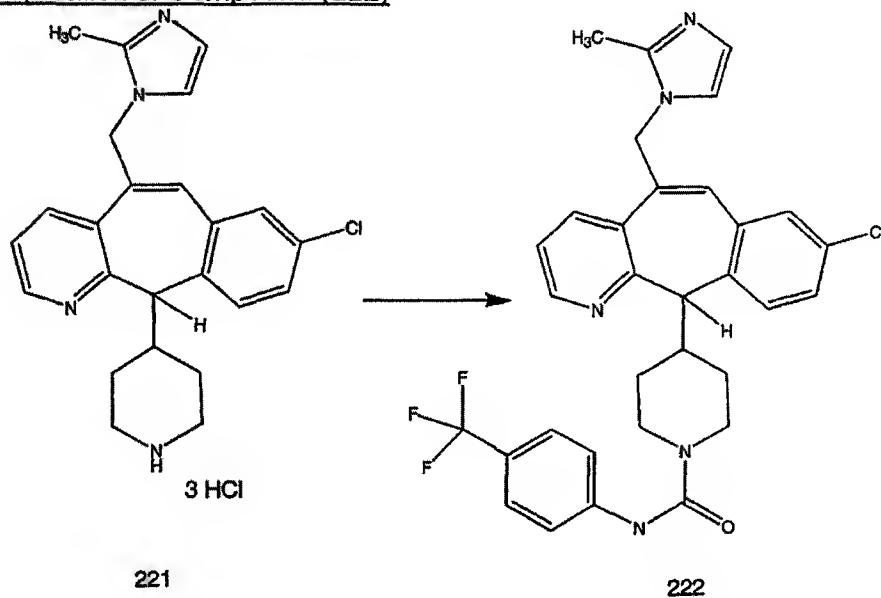

160

Compound (220) from Step C above, was dissolved in 1,4-Dioxane (3 ml). To this solution was then added 4M HCl in Dioxane (5 ml) and the reaction stirred for 3 hours at room temperature. The mixture was then concentrated and dried over night under high vacuum to afford the hydrochloride salt as an off-white solid. (221)

### EXAMPLE 83

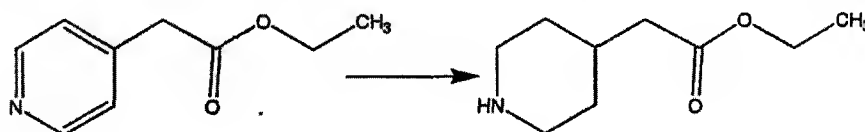

#### Preparation of Compound (222)

To a solution of compound (221) from Preparative Example 20, Step D (51 mg; .126 mmol) and triethylamine (61.47 ml; .441 mmol) in  $\text{CH}_2\text{Cl}_2$  (2 ml) was added 4-trifluoromethylphenyl isocyanate (20.26 ml; .139 mmol) at 0 °C. The reaction stirred for 2-3 hours under  $\text{N}_2$  atmosphere. The  $\text{CH}_2\text{Cl}_2$  and excess triethylamine were removed under vacuo and the resultant product was purified by preparatory thin layer chromatography eluting with 98:2  $\text{CH}_2\text{Cl}_2$ / (sat.)  $\text{MeOH}/\text{NH}_3$  affording the title compound as a white solid (222).

5

A. PREPARATIVE EXAMPLE 21  
PREPARATION OF PIPERIDYL INTERMEDIATE

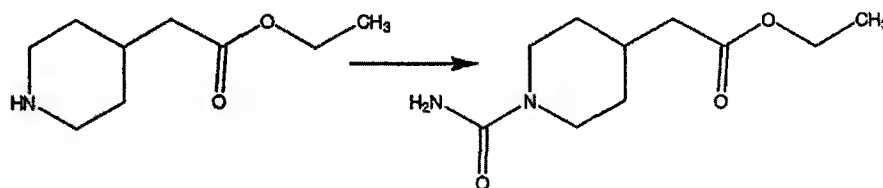

15

Commercially available Ethyl 4-Pyridyl Acetate (4.5g; 27.2 mmol), EtOH (70 ml) and 10% Palladium on Charcoal (catalytic) was shaken under 55 psi hydrogen at room temperature for 94 hrs. The mixture was filtered through Celite and the cake was washed with (4 x 40 ml) of EtOH. The filtrate was concentrated and purified by flash silica column chromatography eluting with 3% (10%  $\text{NH}_4\text{OH}:\text{MeOH}$ )/ $\text{CH}_2\text{Cl}_2$ .

20

B PREPARATION OF (1-CARBAMOYL-PIPERIDIN-4-YL)-ACETIC ACID  
ETHYL ESTER.

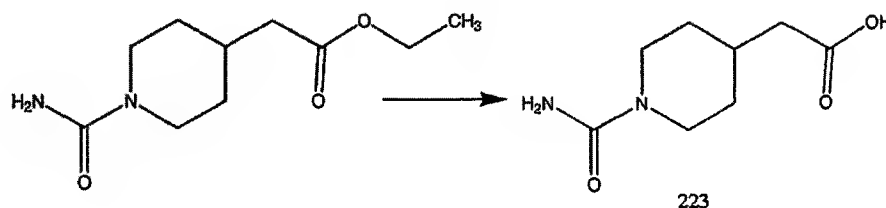

25

4-Pyridyl Acetic Acid (2.362 g) from Step A above, was taken up in  $\text{CH}_2\text{Cl}_2$  (118 ml). To this was added trimethylsilyl isocyanate (27.87 ml). The reaction stirred for 67 hr then was diluted with  $\text{CH}_2\text{Cl}_2$  (700 ml) and washed with saturated aqueous  $\text{NaHCO}_3$  (150 ml). The aqueous layer was extracted with 2 x 200 ml  $\text{CH}_2\text{Cl}_2$ . The organic layers were combined, dried over  $\text{MgSO}_4$ , filtered and concentrated. The

30

162

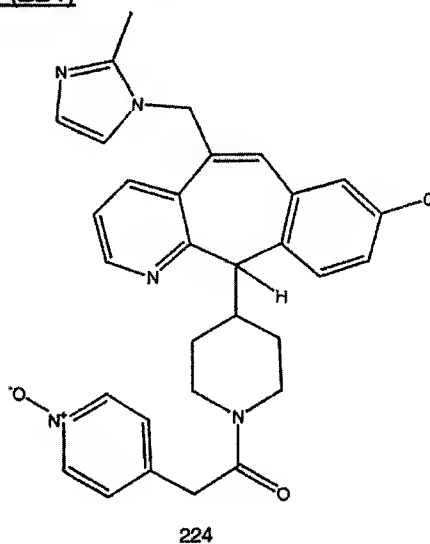

crude product was purified by flash silica column chromatography eluting with 2% (10%  $\text{NH}_4\text{OH}:\text{MeOH}$ )/ $\text{CH}_2\text{Cl}_2$ .

5

C. Product from Step B above (40.63 mg; 0.1896 mmol) was taken up in EtOH (2 ml) and  $\text{CH}_2\text{Cl}_2$  (2 ml) and treated with 1M LiOH (.5 ml; .455 mmol). The reaction mixture was heated to  $50^\circ\text{C}$  and stirred for 5 hr. The reaction was cooled to room temperature treated with 1N HCl (.57 ml; .531 mmol) and stirred for 5 minutes. The resultant mixture was concentrated and dried under high vacuum for 4 days affording the title compound as a white solid. (223)

15

**EXAMPLE 84**Preparation of Compound (224)

20

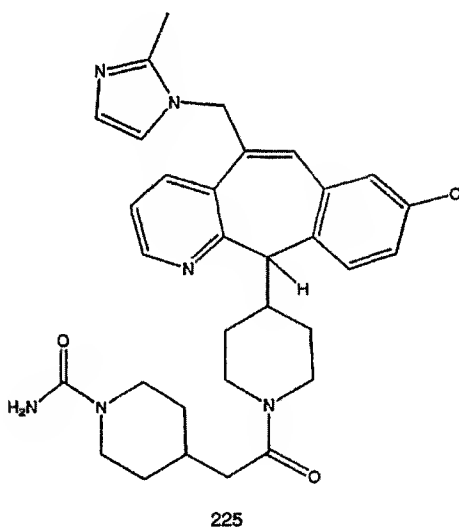

To a solution of Compound (221) from Preparative Example 20, Step D (51 mg; .126 mmol), 4-methylmorpholine (69.3 ml; .630 mmol), DEC (31.44 mg; .164 mmol), and HOBt (22.2 mg; .164 mmol) in DMF (2 ml) was added, 4-Pyridylacetic Acid 1-N-Oxide (disclosed in US 5,719,148; 2/17/98). The reaction stirred for 3 hours at room

temperature. The reaction was diluted with  $\text{CH}_2\text{Cl}_2$  and washed two times with saturated aqueous  $\text{NaHCO}_3$ . The organic layers were combined, concentrated and purified by preparative thin layer chromatography eluting with 95:5  $\text{CH}_2\text{Cl}_2$ : sat.  $\text{MeOH}/\text{NH}_3$  affording the title compound as a white solid (224).

5

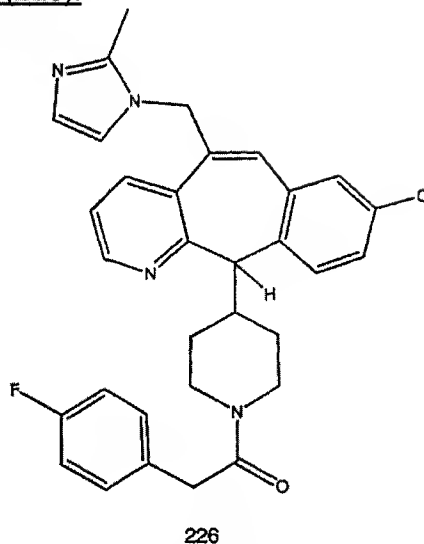

**EXAMPLE 85****Preparation of Compound (225).**

10

15           Compound (221) from Preparative Example 20, Step D (51 mg; .126 mmol) was combined with compound (223) from Preparative Example 21, Step C and reacted in the same manner as Example 84 to afford the title compound as a white solid. (145-155°C dec.)  $\text{MH}^+$  573.(225)

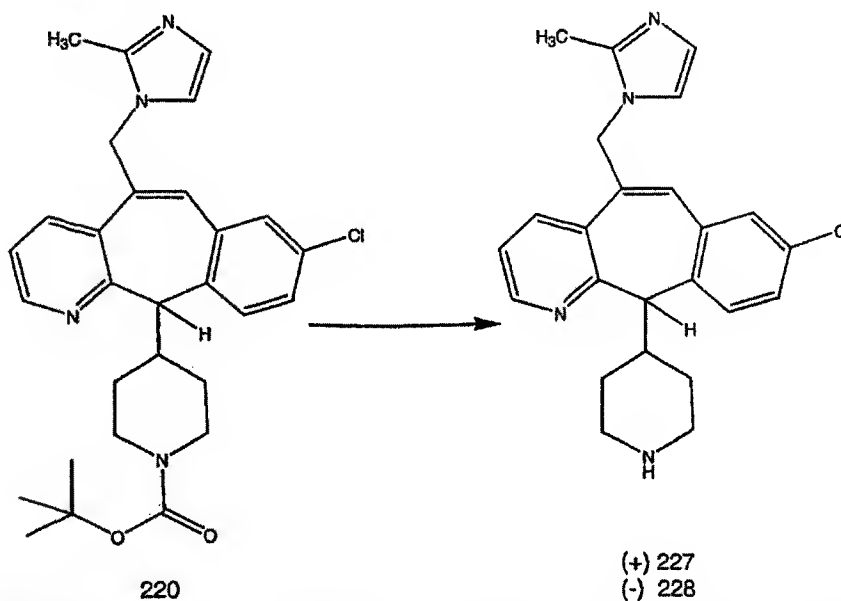

20

**EXAMPLE 86****Preparation of Compound (226).**

5

Compound (221) from Preparative Example 20, Step D (51 mg; .126 mmol) was combined with 4-Fluorophenylacetic acid (Acros) (29.29 mg; .190 mmol) and reacted in the same manner as Example 84 to afford the title compound as an off-white solid. (108-125°C dec.)  $MH^+$  541.(226)

10

**PREPARATIVE EXAMPLE 22****Preparation of Compounds (227 and 228)**

Compound (220) from Preparative Example 20, Step C, (150 mg; .289 mmol) was treated with 4M HCl in Dioxane and allowed to stir for 2-3 hr at room temperature

15

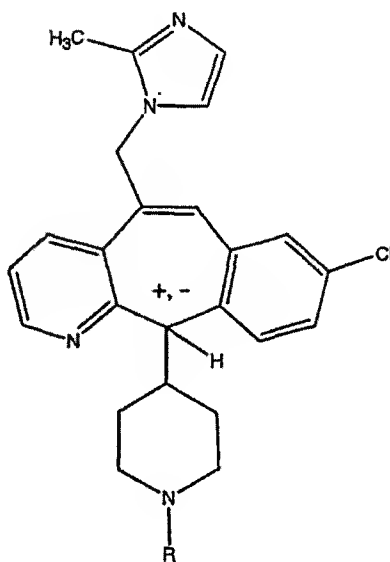

under a N<sub>2</sub> atmosphere. The crude mixture was separated into pure (+) isomer (227) and (-) isomer (228) by preparative chiral HPLC using an AD column, eluting with 85:15:2 Hexanes:IPA:DEA.

5

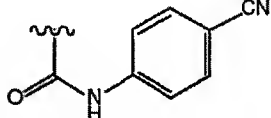

### EXAMPLES 87-90

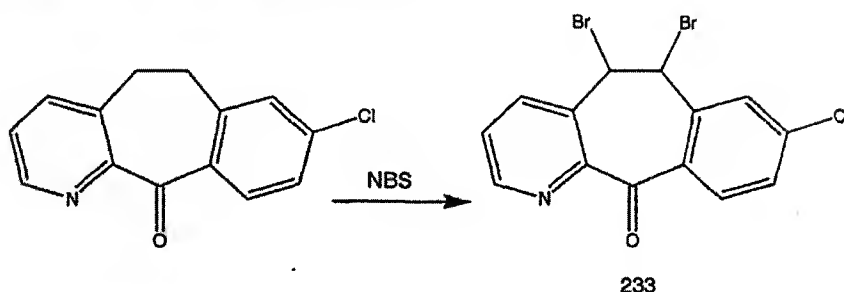

The appropriate (+) compound (227) or (-) compound (228) isomer from Preparative Example 22 above, was taken up in CH<sub>2</sub>Cl<sub>2</sub> treated with the corresponding isocyanate and stirred at room temperature over night. Crude product was purified directly by preparative thin layer chromatography to afford the following compounds (229-232):

10

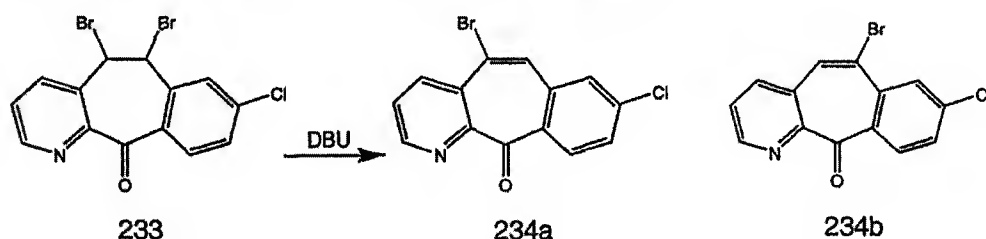

Ex.	R	Compound #	
87		(229)	(+)(148-156°C dec.) MH <sup>+</sup> 556.
88		(230)	(+)(155-166°C dec.) MH <sup>+</sup> 563.
89		(231)	(-)(145-153°C dec.) MH <sup>+</sup> 556.

90		(232)	(-)(159-168°C dec.) MH <sup>+</sup> 563.
----	---	-------	---

**PREPARATIVE EXAMPLE 23****5 A. Preparation of Compound (233).**

The tricyclic keto-compound (disclosed in US Pat. No. 5,151,423) (30.0 g; 123.2 mmol) was combined with NBS (48.2 g; 271.0 mmol) and benzoyl peroxide (0.42 g) in CCl<sub>4</sub> (210 ml). The reaction was heated to 80°C for 10 hr. The mixture was cooled and let stand for 8 hr. The resulting precipitate was filtered. Added MeOH (200 ml) and stirred the mixture over 2 days. The solid was filtered and dried under vacuum to a constant weight.

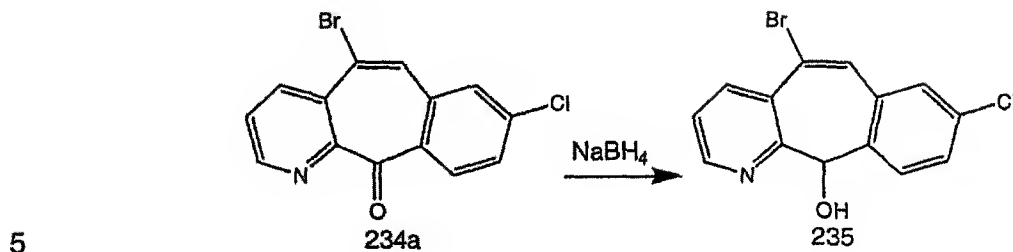

15

**B. Preparation of Compounds (234a) AND (234b)**

The dibromo compound (233) from Step A (35.72 g; 88.97 mmol) above was dissolved in CH<sub>2</sub>Cl<sub>2</sub> (1.5 L) and cooled to 0°C. Dropwise, DBU (15.96 ml) was added and the suspension stirred for 3 hr. The reaction mixture was concentrated redissolved in CH<sub>2</sub>Cl<sub>2</sub> (1.5 L) filtered through a bed of silica gel and rinsed with 5% EtOAc/CH<sub>2</sub>Cl<sub>2</sub> (4 L). The combined rinses were concentrated and purified by flash silica gel column chromatography into pure 5 and 6 mono-bromo substituted compounds eluting with 10-30% EtOAc/Hex then 3%EtOAc/CH<sub>2</sub>Cl<sub>2</sub>.

25

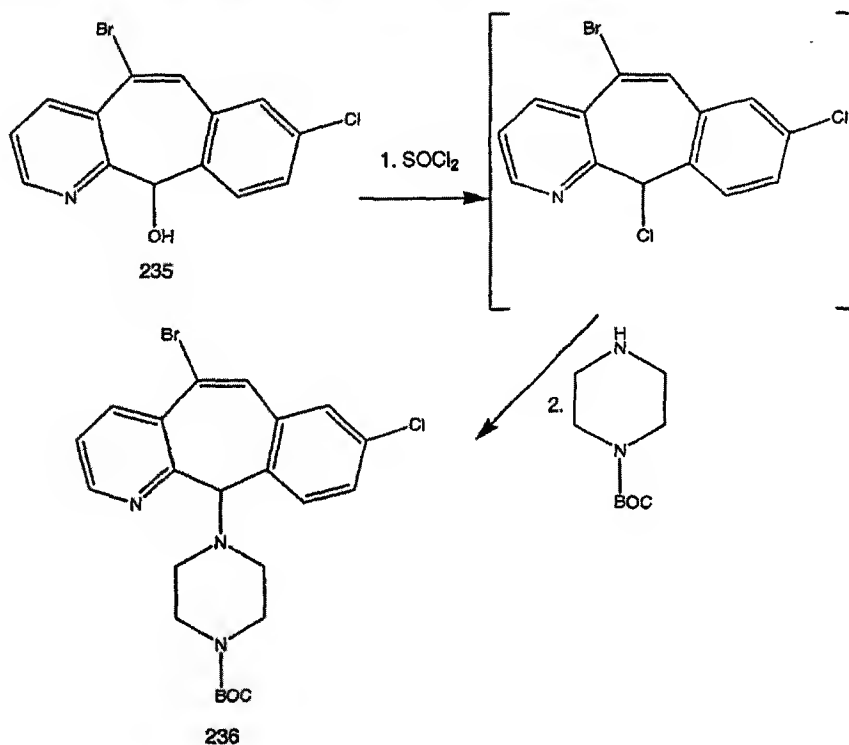

C. Preparation of Compound (235).

The 5-bromo substituted compound (234a) from Step B above (4.0 g; 12.45 mmol) was taken up in MeOH and cooled to 0°C. NaBH<sub>4</sub> (916.4 mg; 24.2 mmol) was added and the reaction mixture stirred for 5.5 hr. The solvent was removed and the resulting residue was used directly.

10

Step D Preparation of Compound (236).

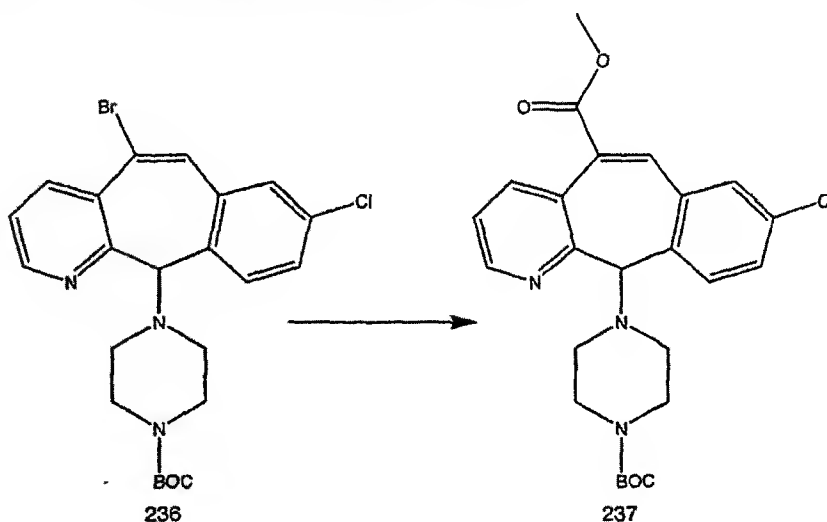

15

The alcohol compound (235) from Step C above (3.98 g; 12 mmol) was dissolved in CH<sub>2</sub>Cl<sub>2</sub> cooled to 0°C and treated with 2,6-Lutidine (5.73 ml; 49 mmol).

SOCl<sub>2</sub> (1.8 ml; 24.6 mmol) was added and the reaction was allowed to stir and come to room temperature over 3 hr. The reaction mixture was poured into 0.5 N NaOH (80 ml) extracted and concentrated in vacuo. The crude product was taken up in CH<sub>3</sub>CN and treated with 1,2,2,6,6-Pentamethylpiperidine (4.45 ml; 24.6 mmol) (Aldrich). The reaction was heated to 60-65°C treated with tert-butyl 1-piperazinecarboxylate (2.32 g; 12 mmol) (Aldrich) and stirred over night under N<sub>2</sub> atmosphere. The reaction mixture was concentrated to dryness, redissolved in CH<sub>2</sub>Cl<sub>2</sub> and washed with sat. aqueous NaCO<sub>3</sub>. The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and purified by flash silica gel column chromatography eluting with 1:4-1:2 EtOAc/Hexanes to afford the product as a white solid.

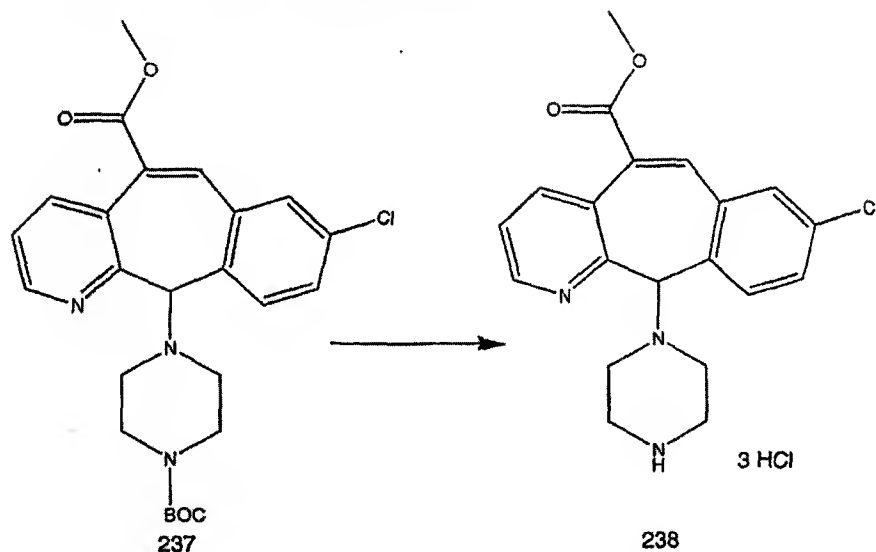

Step E      Preparation of Compound (237).

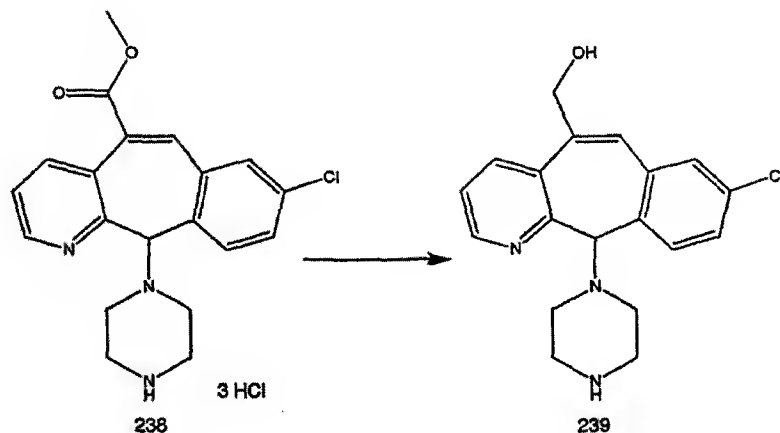

The BOC-protected bromo-compound (236) from Step D above (2 g; 4 mmol), triphenyl phosphine (.54 g; 2 mmol), and palladium chloride (.0723 g; .4 mmol) were combined in MeOH (10 ml) and toluene (30 ml). To this mixture was added DBU (.835 ml; 5.5 mmol) and the mixture was sealed in a Parr bomb. The reaction mixture was stirred and subjected to 90 psi of CO at 80°C for 5 hr. The reaction was diluted with EtOAc (200 ml) and washed with 2 x 80 ml H<sub>2</sub>O. The organic layer was dried over MgSO<sub>4</sub>, filtered and purified by flash silica column chromatography eluting with 1:3 EtOAc/Hexanes.

20

25

F. Preparation of Compound (238).

Compound (237) from Step E above (1.73g; 3.681 mmol) was treated with 4 M HCl in Dioxane (35 ml) and allowed to stir at room temperature for 3 hr. The reaction mixture was concentrated in vacuo and the resulting tan solid was further dried under high vacuum.

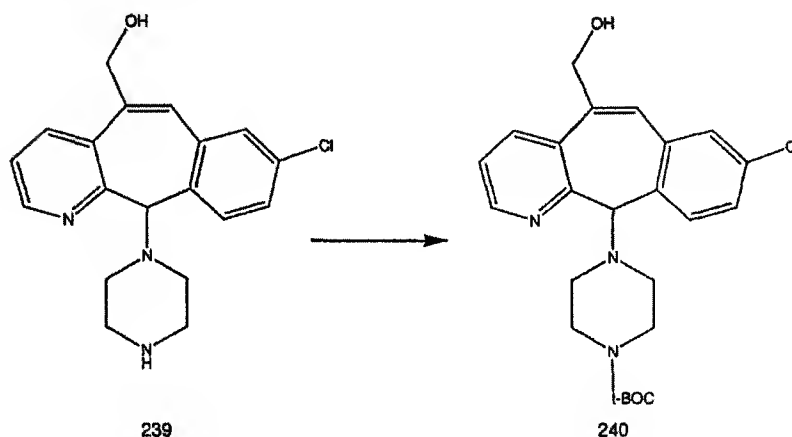

G. Preparation of Compound (239).

The HCl salt (238) from Step F above (1.36 g; 3.68 mmol) was dissolved in THF, cooled to 0°C, treated with 1 M DIBAL in cyclohexane (18.41 ml; 18 mmol) and

stirred over night at room temperature. The mixture was concentrated to dryness and used directly in the next step.

H Preparation of Compound (240).

5

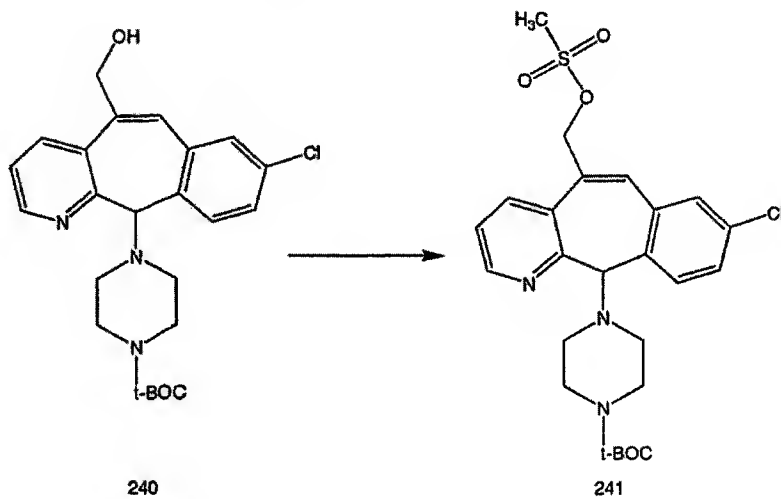

The alcohol (239) from Step G above was taken up in MeOH (50 ml) and H<sub>2</sub>O (5 ml) and treated with Boc anhydride (1.56 g; 7.14 mmol). The pH was adjusted to approximately 10 with 1N NaOH. The reaction mixture was concentrated, taken up in CH<sub>2</sub>Cl<sub>2</sub> and washed with H<sub>2</sub>O (2 x). The organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to a tan solid containing both product and an impurity.

Alternatively, compound (237) was converted to compound (240) by first preparing the acyl imidazole followed by NaBH<sub>4</sub> reduction using the following procedure:

Compound (237) from Step E above (7.0 mmol) was dissolved in a mixture of 15 mL methanol, 60 mL dioxane and 6 mL water containing 25 mL of 10% aqueous LiOH. The mixture was heated at 60° C for 4 hr, then it was concentrated under vacuum and the pH adjusted to 5.2 with 10% aqueous citric acid. The residue was dissolved in CH<sub>2</sub>Cl<sub>2</sub>, washed with brine, dried over MgSO<sub>4</sub> and concentrated under vacuum to give the carboxylic acid. The acid was then dissolved in 20 mL THF containing 14 mmol of 1,1'-carbonyl diimidazole and heated at 38° C for 18 hr. The mixture was then concentrated under vacuum to give the acyl imidazole. The residue was dissolved in a mixture of 21.2 mL of THF and 5.3 mL water and cooled to 0° C.

To the solution was added 35 mmol of  $\text{NaBH}_4$  and it was stirred for 1.5 hr. 5 mL brine and 25 mL  $\text{CH}_2\text{Cl}_2$  was then added. The organic layer was dried over  $\text{MgSO}_4$  and concentrated under vacuum to give compound (240) in essentially a quantitative yield.

5 I. Preparation of Compound (241).

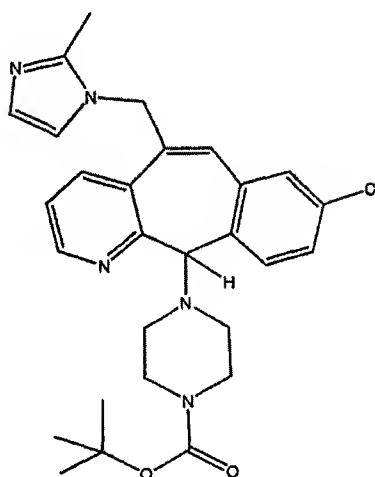

The crude product (240) from Step H above (200 mg; 0.45 mmol) was taken up  
10 in  $\text{CH}_2\text{Cl}_2$  (2 ml) and treated with triethyl amine (126 ml; 0.91 mmol) followed by  
methanesulfonyl chloride (35 ml; 0.45 mmol). The reaction stirred over night at room  
temperature. The mixture was diluted with  $\text{CH}_2\text{Cl}_2$  and quenched with sat. aqueous  
NaCl. The organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated to afford  
compound (241).

15

EXAMPLE 91

Preparation of Compound (242)

172

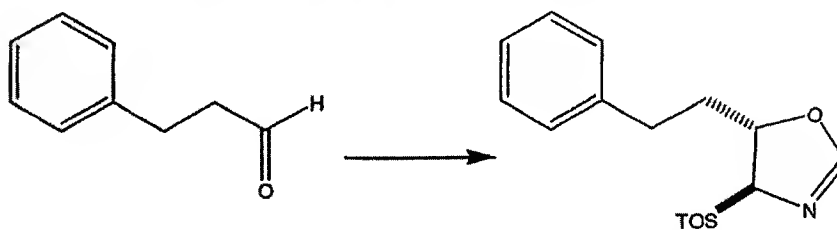

242

The mesylate compound (241) from Preparative Example 23, Step I above  
 5 (230 mg; .442 mmol) was reacted in the same manner as Preparative Example 20,  
 Step C. Purification of the crude product was accomplished by preparative TLC plates  
 eluting with 95:5 CH<sub>2</sub>Cl<sub>2</sub>/MeOH(NH<sub>3</sub>) followed by 1:1 EtOAc:Hexanes to afford the title  
 compound as a light tan solid (242) 105-116°C (dec) MH<sup>+</sup> 506.

10

#### PREPARATIVE EXAMPLE 24

##### A. Preparation of Compound (243)

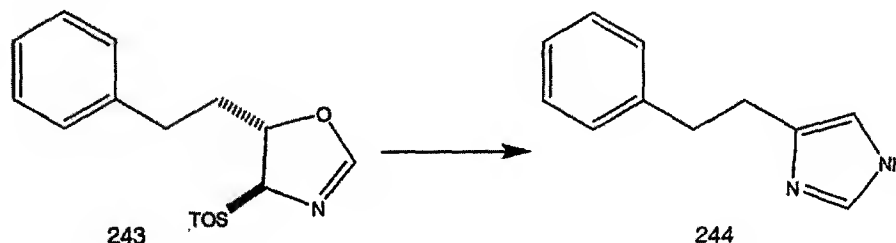

243

15

NaCN and 3-Phenylpropionaldehyde (ACROS) were dried overnight under  
 vacuum. The aldehyde was then passed through activated Al<sub>2</sub>O<sub>3</sub>. Tosylmethyl  
 isocyanide (5 g, 25.6 mmol) (ACROS) and dry 3-Phenylpropionaldehyde (3.36 g; 25.1

mmol) were combined in EtOH (42 ml) and stirred for 5 minutes. To the turbid mixture was added the dry NaCN (1.23 g; 25.1 mmol). An exothermic reaction was observed and after 5 minutes TLC showed consumption of starting material. The reaction was transferred to a sealed tube and used directly in the next experiment.

5

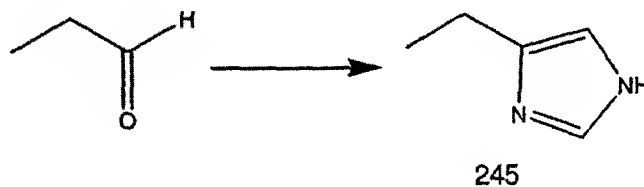

10 B. The crude product (243) from Step A above (25 mmol), was diluted up to 65 ml total volume with EtOH. To this mixture was added 7N NH<sub>3</sub> in MeOH (100 ml) and the reaction was heated to 90°C over night (20 hr). The reaction was allowed to cool to room temperature and stirred for 2 hr then concentrated to dryness. The crude product was purified by flash silica column chromatography eluting with a gradient of  
15 1-5% MeOH(sat. NH<sub>3</sub>)/CH<sub>2</sub>Cl<sub>2</sub> (244).

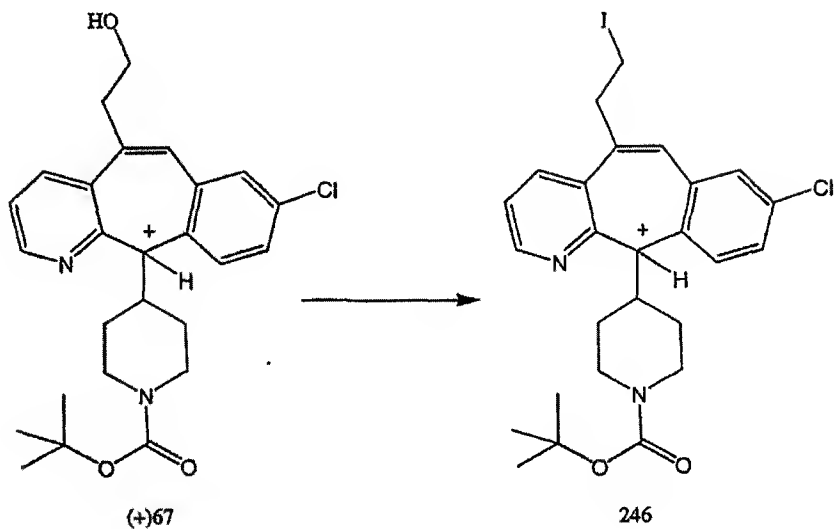

#### PREPARATIVE EXAMPLE 25

##### Preparation of Compound (245)

20

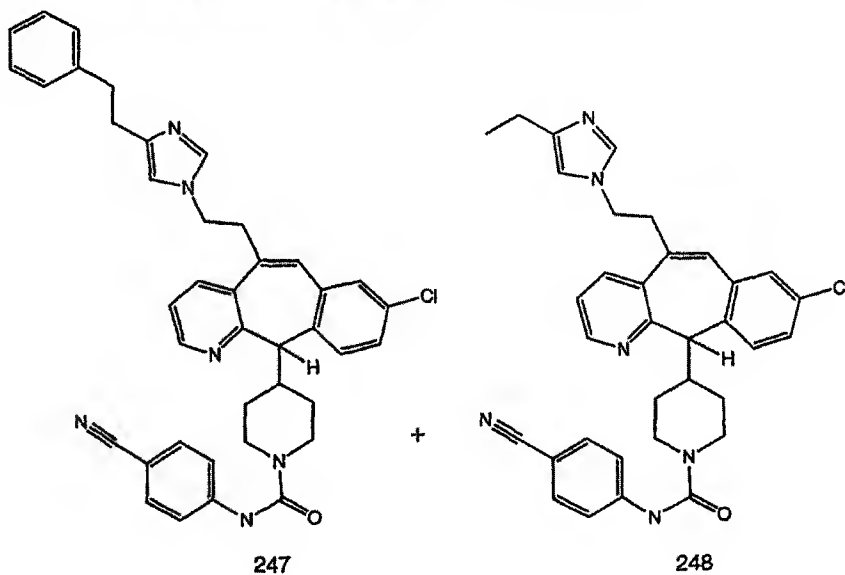

Propanaldehyde (1.5 g; 25.11 mmol) (ACROS) and tosylmethyl isocyanide (5 g; 25.6 mmol) were reacted in the same manner as Preparative Example 24 above to  
25 afford the title compound (245).

PREPARATIVE EXAMPLE 26Compound (246) (+) isomer

5

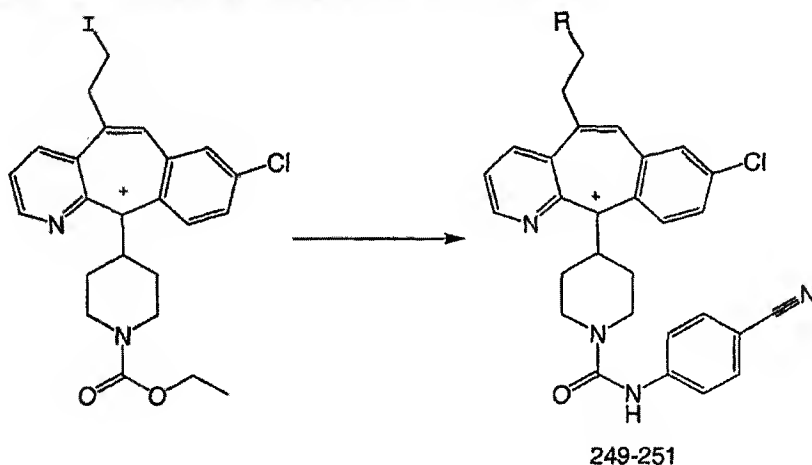

The (+) isomer of compound (67) from Preparative Example 6 isolated by chiral AD column chromatography was further reacted as in Preparative Example 6 to obtain compound (246).

10

EXAMPLE 92 AND 93PREPARATION OF COMPOUNDS (247) AND (248).

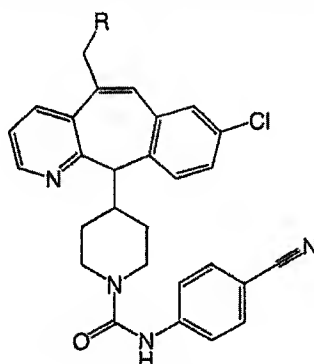

Compound (246) from Preparative Example 26 above was reacted in the same manner as Examples (22), (25) and (29) using the appropriate imidazole or isocyanate respectively to afford the title compounds (247) and (248).

5

**EXAMPLES 94-96****Preparation of Compounds (249), (250) AND (251)**

10 In a similar manner as Preparative Example 26 above, the (+) isomer of the carbamate was obtained and reacted in essentially the same manner as Examples 92 and 93 substituting with the appropriate imidazoles, to provide compounds (249)-(251) shown in the table below.

Ex. #	R=	Cmp. #	Phys. Data
94		249	mp 133.2-144.3°C dec. MH(+) 577.14
95		250	mp 132.1-143.8°C dec. MH(+) 591.16
96		251	mp 134.1-144.9°C dec. MH(+) 563.10

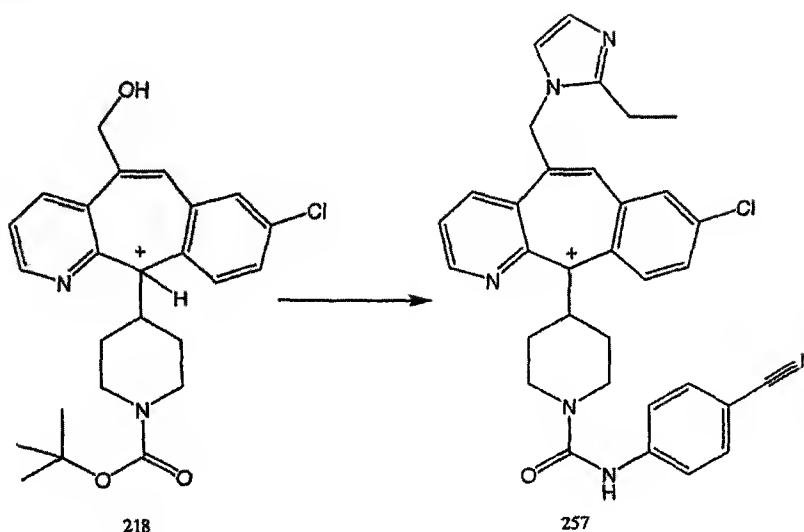

EXAMPLES 97-101Preparation of Compounds (252), (253), (254), (255) AND (256).

252-256

In essentially the same manner as in Preparative Example (20) and Example 5 (29), the following compounds were prepared:

EX.	R=	#	PHYS. DATA
97		252	mp 148-159°C dec. MH(+) 577.
98		253	mp 134-142°C dec. MH(+) 563.
99		254	mp 90-102°C dec. MH(+) 625.
100		255	mp 126-139°C dec. MH(+) 577.
101		256	mp 151-164°C dec. MH(+) 535.

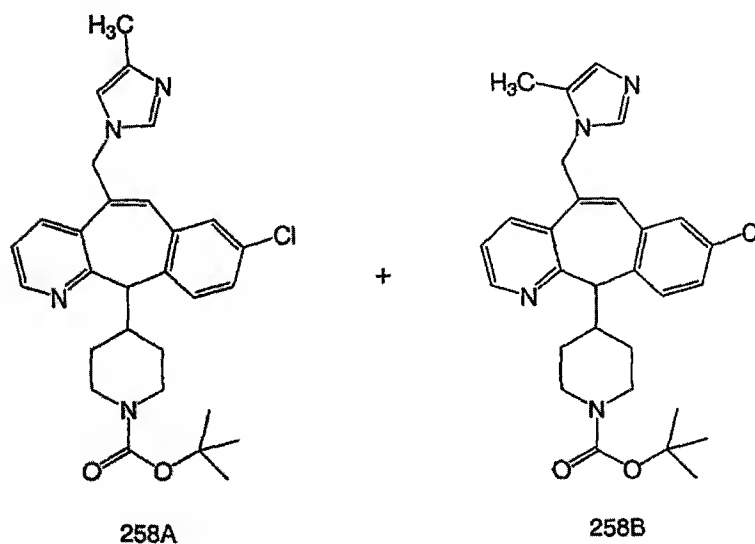

EXAMPLE 102

Preparation of Compound (257)

- 5 The (+) isomer of compound (218) obtained in essentially the same manner as Preparative Example (22), was further reacted in the same manner as in Preparative Example (6), Steps E and F, Examples (21), (23) and (29) substituting with 2-Ethyl imidazole in Ex. (21) to afford the title compound (257). (146-157°C dec.),  $MH^+$  564

10

PREPARATIVE EXAMPLE 27  
Compounds (258A) AND (258B).

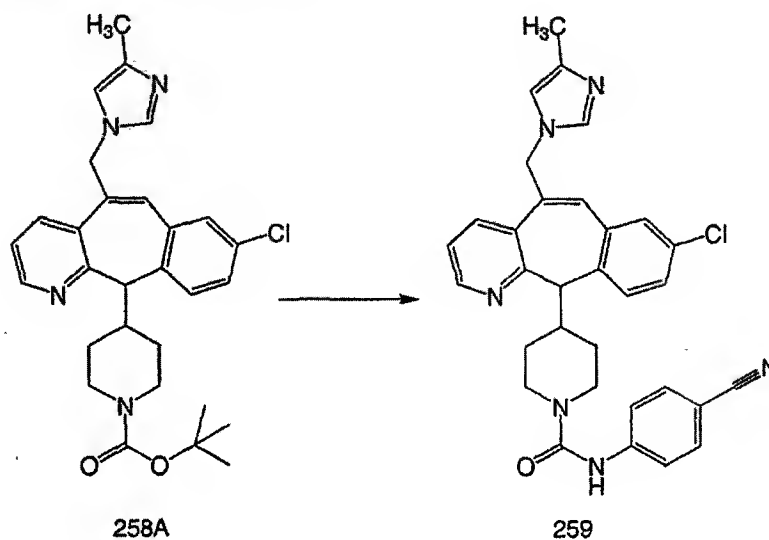

In essentially the same manner as Preparative Example (20), substituting 4-methylimidazole, compound (258) was prepared as a mixture of 4 and 5 substituted imidazole derivatives. This mixture was then reacted in a similar manner as Example 35 and the isomers separated (258A) and (258B).

### EXAMPLE 103

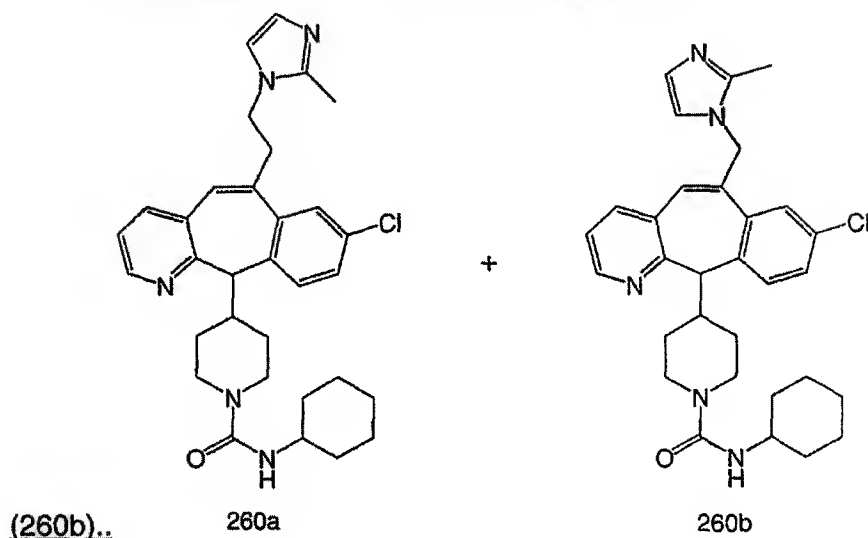

#### Preparation of Compound (259)

10

The pure 4-methyl imidazole isomer (258A) was reacted as in Preparative Example 20, Step D, and Example (29) to afford the title compound as a white solid (259). (128-138°C dec.)  $MH^+$  549

15

**EXAMPLE 104****Preparation of compound mixture (260a) AND**

5                      **Step A**                      Compound (108) from Preparative Example 9, Step E, was reacted with compound (64) from Preparative Example 6, Step A in essentially the same manner as in Preparative Example 6, Steps B-F, to afford a mixture of one and two methylene spaced iodo intermediates.

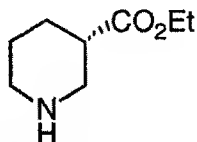

10                      **Step B**                      The mixture of intermediates from Step A above was reacted in essentially the same manner as in Example 22 to afford a mixture of one and two methylene spaced imidazole derivatives.

15                      **Step C** The mixture from Step B above was reacted in the same manner as Preparative Example 20, Step D, followed by a reaction with phenyl isocyanate in the same manner as Example 15 to afford the title compound as a 1:1 mixture (260a) and (260b) (133-145°C dec.);  $MH^+$  544

PREPARATIVE EXAMPLE 28  
COMPOUND (261).

Step A.  
56, 1166-1170.

Ref: *Gazz. Chim. Ital.* (1972) **102**, 189-195; *J. Org. Chem.* (1991)

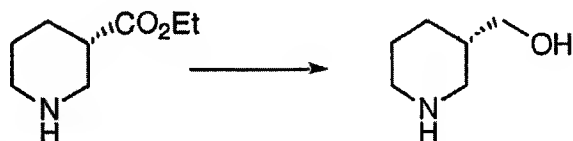

5

Ethyl nipecotate (70.16 g, 0.446 mmol) and D-tartaric acid (67 g, 1.0 eq) were dissolved in hot 95% EtOH (350 mL). The resulting solution was cooled to room temperature and filtered and the crystals washed with ice-cold 95% EtOH. The crystals were then recrystallized from 95% EtOH (550 mL) to give the tartrate salt (38.5g, 56% yield). The salt (38.5g) was dissolved in water (300 mL) and cooled to 0 °C before neutralizing with 3M NaOH. The solution was extracted with CH<sub>2</sub>Cl<sub>2</sub> (5 X 100 mL) and the combined organics dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated under reduced pressure to give a clear oil (19.0g, 89% yield). CIMS: MH<sup>+</sup>= 158.

15

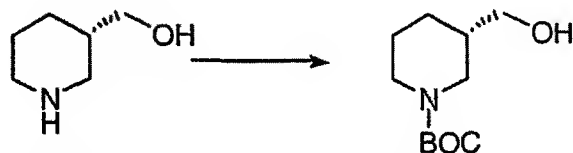

Step B

LAH (118 mL, 1.0 M in Et<sub>2</sub>O, 1.0 eq.) was added to a solution of the product from Step A (18.5g, 0.125 mmol) in THF (250 mL) at 0 °C over 20 minutes. The resulting solution was warmed slowly to room temperature and then heated at reflux 2 hours. The reaction was cooled to room temperature and quenched by the slow addition of saturated Na<sub>2</sub>SO<sub>4</sub>. The resulting slurry was dried by the addition of Na<sub>2</sub>SO<sub>4</sub>, filtered through Celite and concentrated to give a colorless oil (13.7g, 98% crude yield). CIMS: MH<sup>+</sup>=116; [α]<sub>D</sub><sup>20</sup>= -8.4° (5.0 mg in 2 mL MeOH).

25

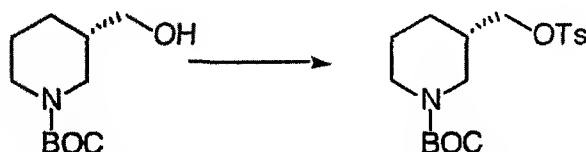

Step C

The product of Step B (13.6g, 0.104 mmol) was dissolved in MeOH (100 mL) and H<sub>2</sub>O (100 mL) di-tert-butyl dicarbonate (27.24, 1.2 eq.) was then added

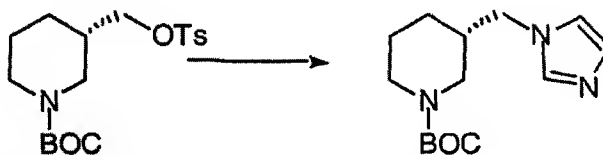

portionwise keeping the pH >10.5 by the addition of 50% NaOH. The reaction mixture was stirred at room temperature an additional 2.5 hours and concentrated *in vacuo*. The residue was diluted with H<sub>2</sub>O (350 mL) and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 X 150 mL). The combined organics were dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated under reduced pressure. The crude product was purified by flash chromatography using a 50% EtOAc in hexanes solution as eluent to give a white solid (12.13g, 48% yield). FABMS: MH<sup>+</sup>= 216; [α]<sub>D</sub><sup>20</sup>= +15.2 (5.0 mg in MeOH).

#### Step D

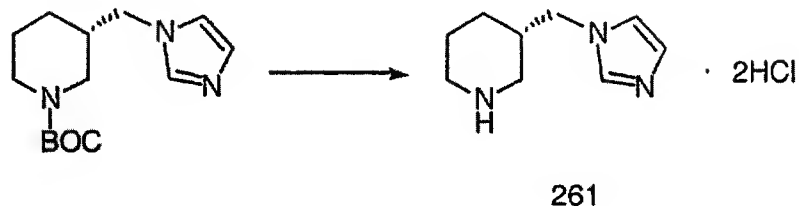

p-Toluenesulfonyl chloride (12.75g, 1.2 eq.) was added portionwise to a solution of the product from Step C (12.00g, 55.74 mmol) in pyridine (120 mL) at 0 °C. The resulting solution was stirred at 0 °C overnight. The reaction mixture was diluted with EtOAc (300 mL) and washed with cold 1N HCl (5 X 300 mL), saturated NaHCO<sub>3</sub> (2 X 150 mL), H<sub>2</sub>O (1 X 100 mL), and brine (1 X 100 mL), dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated *in vacuo* to give a pale yellow solid (21.0g, 100% crude yield). FABMS: MH<sup>+</sup>= 370.

#### Step E

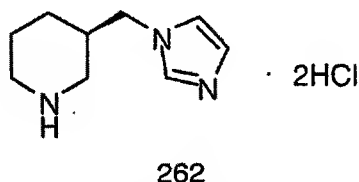

The product of Step D (21.0g, 55.74 mmol) in DMF (300 mL) was treated with sodium imidazole (8.37 g, 1.5 eq.) and the resulting solution heated at 60 °C for 2 hours. The reaction mixture was cooled to room temperature and concentrated *in vacuo*. The residue was diluted with H<sub>2</sub>O (300 mL) and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3 X 150 mL). The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and concentrated. The crude product was purified by flash chromatography using a 7% MeOH in CH<sub>2</sub>Cl<sub>2</sub> solution as eluent to give a pale yellow solid (7.25 g, 49% yield). FABMS: MH<sup>+</sup>= 266; [α]<sub>D</sub><sup>20</sup>= +8.0 (5.0 mg in MeOH).

182

Step F

- 5 The product of Step E (5.50 g, 20.73 mmol) was stirred at room temperature in 4M HCl in dioxane (50 mL) overnight. The resulting solution was concentrated and the residue triturated with Et<sub>2</sub>O to give Compound (261) as a yellow solid (4.90 g, 99% yield). CIMS: MH<sup>+</sup>= 166.

10

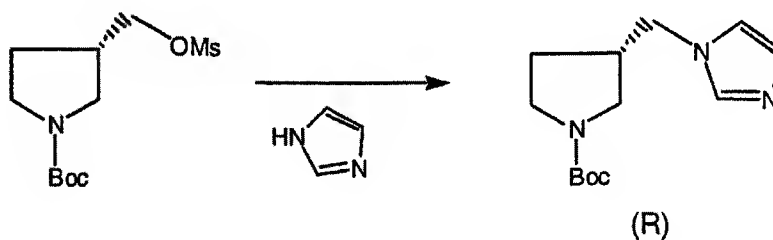

PREPARATIVE EXAMPLE 29Compound (262)

- 15 By essentially the same procedure set forth in Preparative Example 28 above, using L-tartaric acid instead of D-tartaric acid in Step A, Compound (262) was prepared.

20

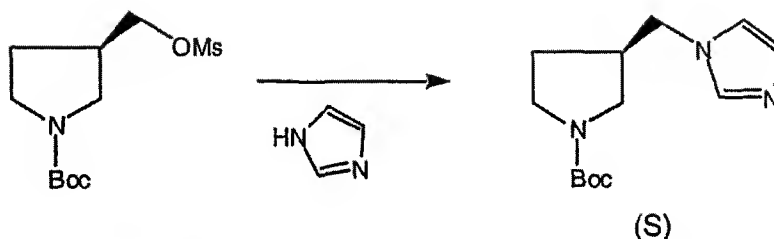

PREPARATIVE EXAMPLE 30  
PREPARATION OF COMPOUNDS (263) AND (264).

Step A     1N-tert-BUTOXYCARBONYL-3(R) AND 3(S) -(1H-IMIDAZOL-1-YL) METHYL) PYRROLIDINES

25

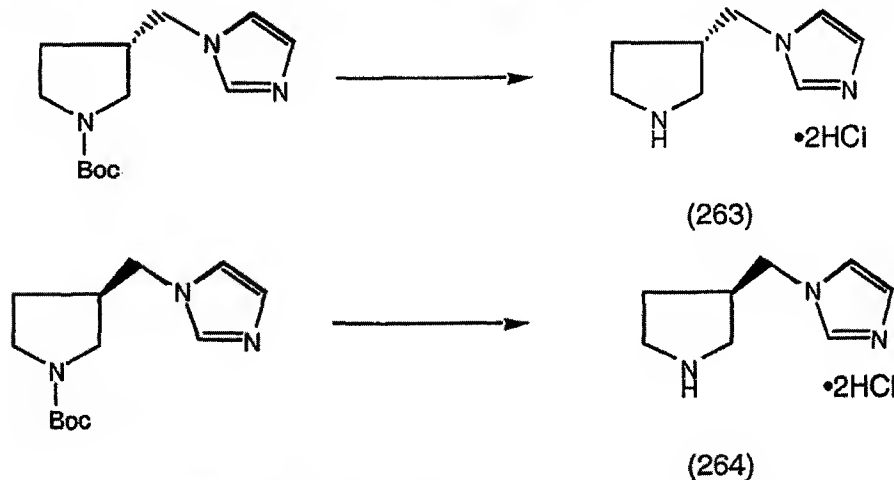

183

3(R)-(3-Methanesulfonyloxymethyl)pyrrolidine (J. Med. Chem. 1990, 33, 77-77) (0.993g, 3.56 mmoles) was dissolved in anhydrous DMF (25 mL) and sodium imidazole (0.6g, 10 mmoles) was added. The mixture was heated at 60° C for 2 h and then evaporated to dryness. The product was extracted with CH<sub>2</sub>Cl<sub>2</sub> and washed with brine. The CH<sub>2</sub>Cl<sub>2</sub> extract was evaporated to dryness to give the titled compound (263) (1.1409g, 100%), ESMS: FABMS (M+1) = 252; <sup>1</sup>HNMR (CDCl<sub>3</sub>) 1.45 (s, 9H), 1.5-1.7 (m, 1H), 1.9 - 2.1 (m, 1H), 2.5-2.7 (m, 1H), 3.0-3.2 (m, 1H), 3.3- 3.6 (m, 2H), 3.9 (dd, 2H), 6.9 (s, 1H), 7.1(s, 1H), 7.45 (s, 1H)

In a similar manner, the (S) isomer was prepared from 3(S)-(3-Methanesulfonyloxymethyl)pyrrolidine (0.993g, 3.56 mmol) to give the title compound (1.14 g, 100%).

#### 15      Step B      3(R) AND 3(S)-(1H-IMIDAZOL-1-YL)METHYL] PYRROLIDINES

20

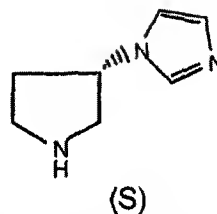

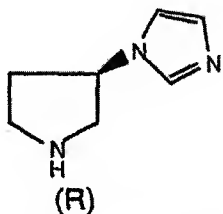

The (R) product (0.48g, 1.91 mmoles) from Step A was stirred in 4N HCl in dioxane (10 mL) for 2h and then evaporated to dryness to give the title compound (263) as the HCl salt.

In a similar manner the (S) isomer was prepared to give compound (264) as the HCl salt.

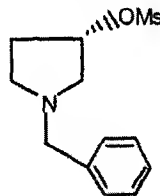

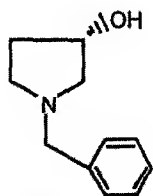

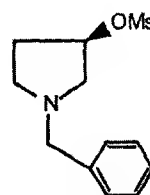

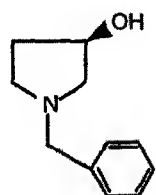

25

## PREPARATIVE EXAMPLE 31

Compounds (265) AND (266).

Step A  
PYRROLIDINES

## 1N-BENZYL-3-(R) AND (S)-METHANESULFONYLOXY)-

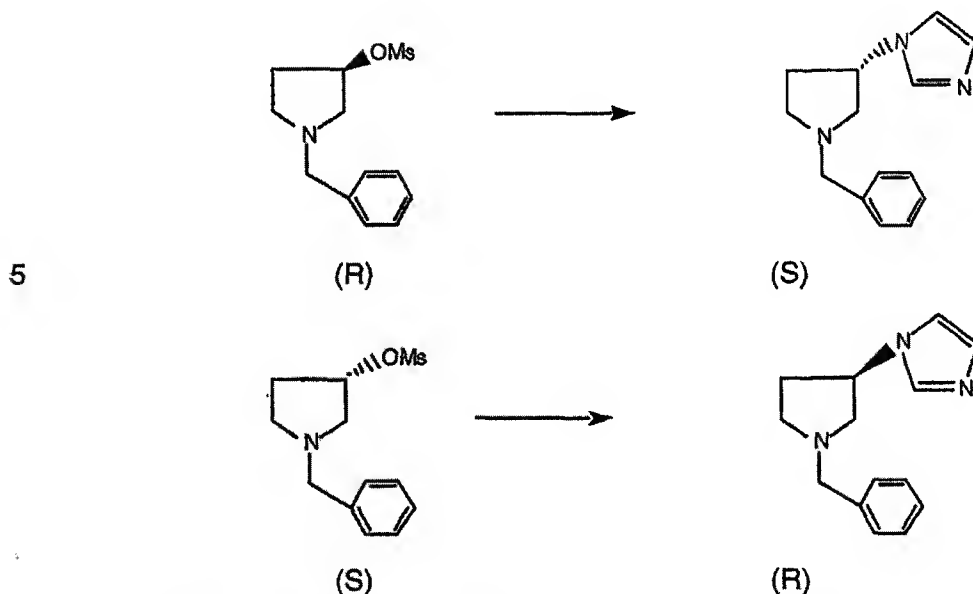

10

1N-Benzyl-3(R) -hydroxy -pyrrolidines (5g, 28.21 mmol) and triethylamine (7.86 mL, 56.35 mmol) were dissolved in  $\text{CH}_2\text{Cl}_2$  (50 mL) and the mixture was stirred under nitrogen at  $0^\circ\text{C}$  . Methanesulfonylchloride (2.62 mL, 33.87 mmol) was added and the solution was stirred at room temperature for 2 h. The solution was diluted with  $\text{CH}_2\text{Cl}_2$  and washed with saturated aqueous sodium bicarbonate, water and dried ( $\text{MgSO}_4$ ), filtered and evaporated to dryness to give the (R) title compound (7.2g, 96.4 %). FABMS ( $M+1$ ) = 256;  $^1\text{H}$ NMR ( $\text{CDCl}_3$ ) 2.2 (m, 1H), 2.3 (m, 1H), 2.52 (m, 1H), 2.7-2.85 (m, 3H), 2.95 (s, 3H), 3.65 (q, 2H), 5.16 (m, 1H), 7.3 (s, 5H).

In a similar way the (S) isomer was prepared from 1N-Benzyl-3(S)-hydroxy-pyrrolidines (5g, 28.21 mmoles) to give the (S) title compound (7.15g, 98%).

20

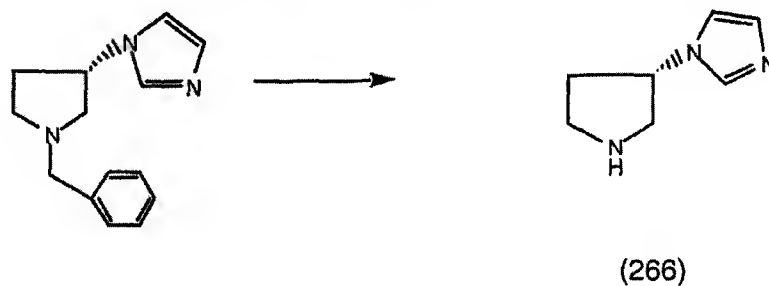

Step B      1N-BENZYL-3-(S) AND (R)-(1H-IMIDAZOL-1-YL) -  
PYRROLIDINES

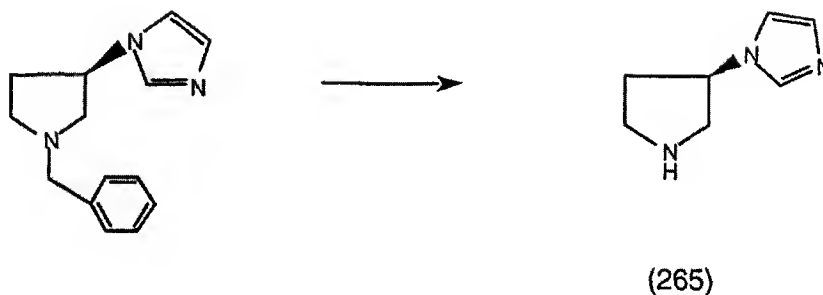

A solution of the (R) product from Step A (2.0g, 7.84 mmol) was added to a stirred solution of imidazole (1.1g, 16.17 mmol) in DMF (25 mL) under nitrogen atmosphere. The mixture was stirred at 60 °C for 16 h. DMF was evaporated *in vacuo*. The resulting crude product was extracted with CH<sub>2</sub>Cl<sub>2</sub> and the extract was successively washed with water and brine, and the CH<sub>2</sub>Cl<sub>2</sub> was evaporated to leave the title residue which was chromatographed on silica gel using 3% (10% conc NH<sub>4</sub>OH in methanol)- CH<sub>2</sub>Cl<sub>2</sub> as eluant to give the title compound (0.95 g, 50.56%). FABMS (M+1) = 228.

In a similar fashion the other isomer was prepared.

### Step C 3-(R) AND (S)-(1H-IMIDAZOL-1-YL)-PYRROLIDINES

186

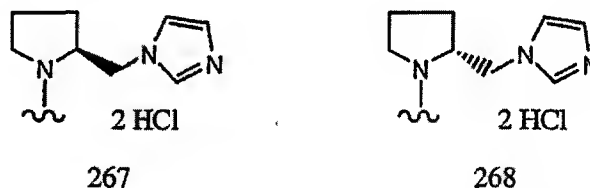

A mixture of the (S) product (0.95 g) from Step B and 10% Pd on carbon (0.5 g) in EtOH (20 mL) was shaken at 50 psi under an atmosphere of hydrogen for 24h. The catalyst was filtered and the solvent removed to give the title compound (266) (0.522 g, 99.9%).

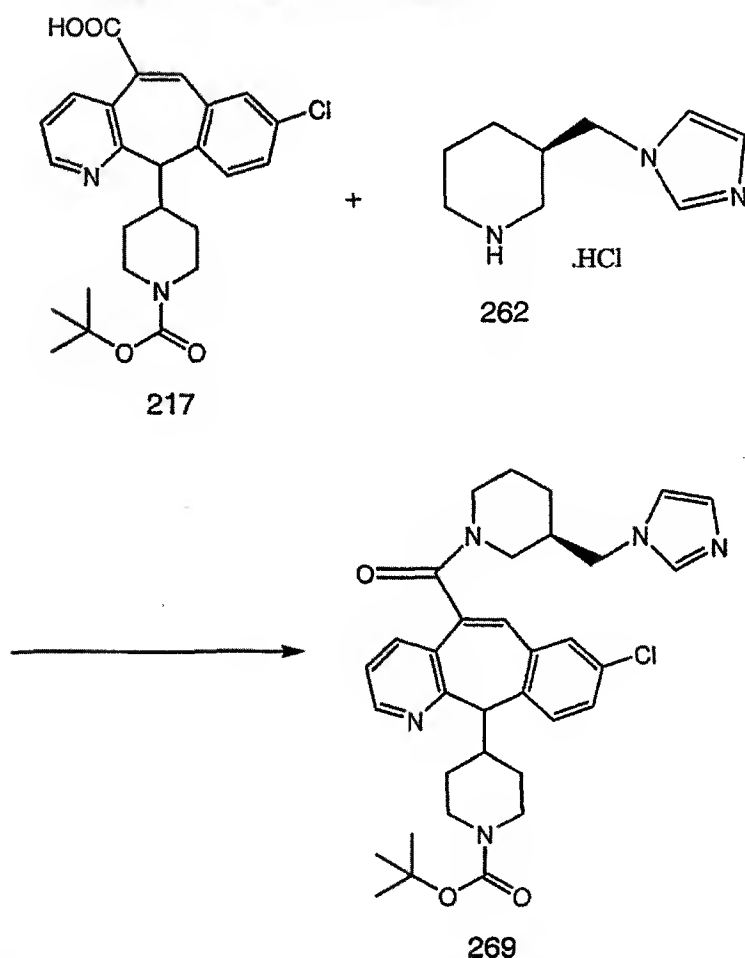

In a similar manner the (R) isomer was prepared from 1.0 g of the starting (R) product from Step B and 10% Pd on carbon (0.6 g) to give compound (265) in 99% yield.

### PREPARATIVE EXAMPLE 32

#### Compounds (267) AND (268)

By essentially the same procedure set forth in Preparative Example 31 above, beginning with L or D-prolinol, the title compounds (267) and (268) were prepared.

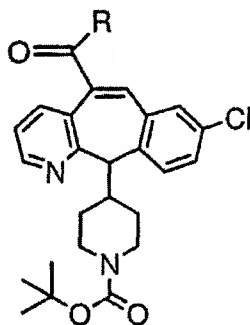

EXAMPLE 105Preparation of Compound (269).

Compound (217) from

- Preparative Example 19 (0.227g, 0.499 mmol) was added to a solution of Compound (262) from Preparative Example 29 (0.131 g, 0.649 mmol), DEC (0.249 g, 1.3 mmol), HOBT (0.175 g, 1.3 mmol) and NMM (0.5 mL) in DMF (25 mL). The resulting solution was stirred at room temperature for 24 hours. The reaction mixture was diluted with H<sub>2</sub>O until precipitation ceased and the slurry was filtered. The precipitate was diluted with CH<sub>2</sub>Cl<sub>2</sub>, washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated. The crude product was purified by chromatography using a 5% (10% NH<sub>4</sub>OH in MeOH) solution in CH<sub>2</sub>Cl<sub>2</sub> as eluent to give the title compound (269) (0.184 g, 62 % yield).

EXAMPLES 106-111

Preparation of Compounds (270)-(275). Using the appropriate amine from the Preparative Examples 28-32, and following essentially the same procedure as in Example 105 above, the following compounds were prepared:

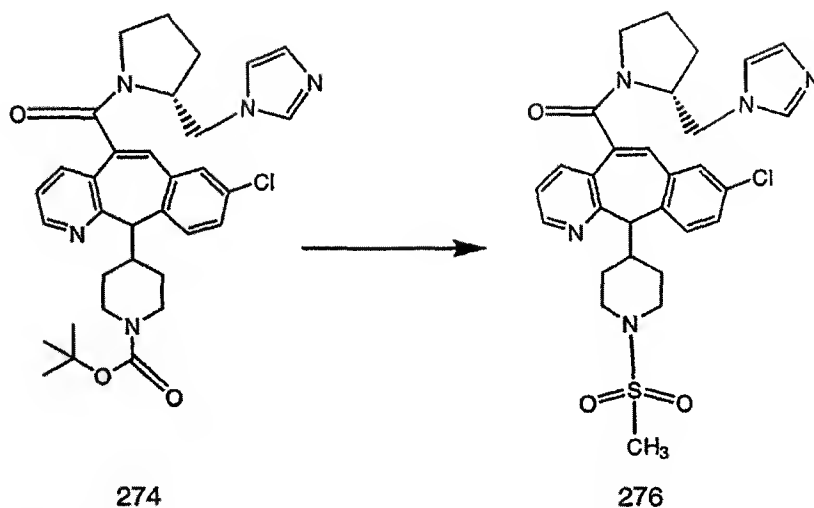

5

EX.	R=	Compound #	PHYS. DATA
106		270	MH <sup>+</sup> =603
107		271	MH <sup>+</sup> =589
108		272	MH <sup>+</sup> =589
109		273	MH <sup>+</sup> =589
110		274	MH <sup>+</sup> =603
111		275	MH <sup>+</sup> =603

EXAMPLE 112

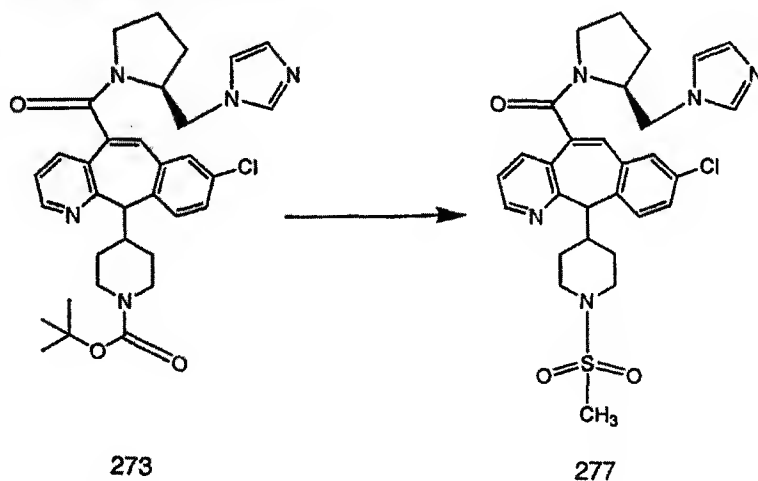

Preparation of Compound (276)

189

Compound (274) from Example 110 above (0.125g, 0.213 mmoles) in  $\text{CH}_2\text{Cl}_2$  (50 mL) was stirred with TFA (10 mL) at room temperature overnight. The reaction mixture was evaporated to give the TFA salt (0.28g) which was redissolved in  $\text{CH}_2\text{Cl}_2$  (50 mL) and cooled (ice water bath). Triethyl amine (0.1 mL) followed by methane sulfonyl chloride (0.038 g, 0.319 mmoles) were added and the reaction mixture was stirred at room temperature overnight. The reaction mixture was washed with sodium bicarbonate and water. The organic layer was dried over  $\text{MgSO}_4$  and evaporated to dryness to give the title compound (276) (0.05g,  $\text{MH}^+=567$ )

**EXAMPLE 113**  
**Preparation of Compound (277)**

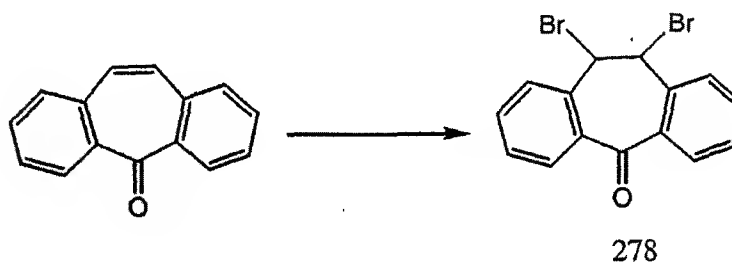

Starting with Compound (273) from Example 109 above and following essentially the same procedure as in Example 112 above, Compound (277) was prepared ( $MH^+=567$ ).

5

PREPARATIVE EXAMPLE 33

A. Compound (278)

10

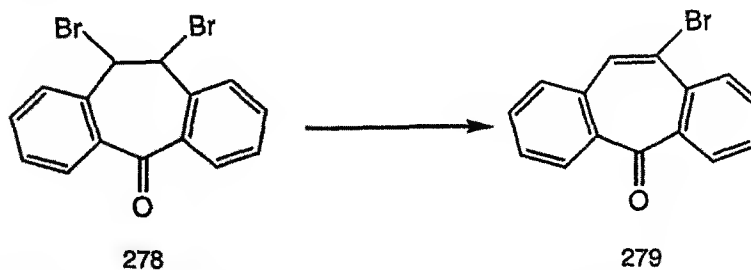

15

To a stirred solution of bromine (33.0g, 210 mmol) in  $CCl_4$  (100 ml) was added a solution of dibenzosuberone (37.0g, 179 mmol) in  $CCl_4$  (200ml) at room temperature. The resulting solution was stirred at room temperature for 1.5 hours. The white crystals were collected by filtration to give the product (278) (60.12g, 92% yield,  $M+H=367$ ).

20

B. Preparation of Compound (279)

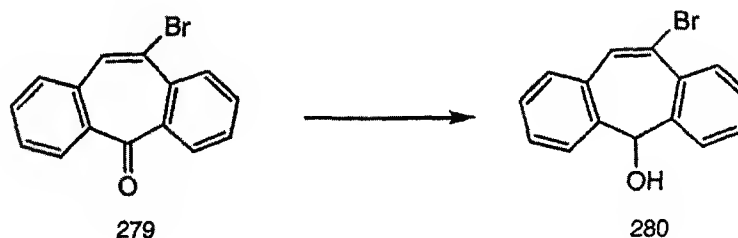

25

A solution of the di-bromo compound (278) from step A (60.0 g, 163 mmol) and NaOH (20.0 g, 491 mmol) in MeOH (500ml) was stirred and heated to reflux for 1.5 hours. The reaction mixture was then cooled to room temperature and stirred overnight. The mixture was evaporated to dryness then extracted with  $CH_2Cl_2-H_2O$ .

The combined organic layer was dried over  $\text{MgSO}_4$ , filtered and evaporated to dryness to give a yellow solid (279) (46.34 g, 100% yield,  $M=285$ )

5      C.      Preparation of Compound (280).

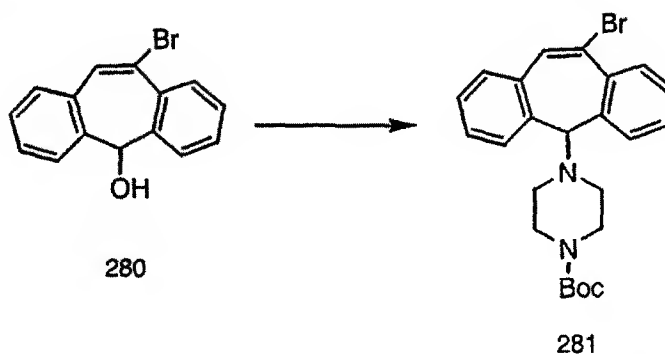

10

To a stirred solution of the mono-bromo compound (279) from step B (10.0 g, 35.07 mmol) in MeOH (200 ml) under nitrogen at 0 °C was added  $\text{NaBH}_4$  (1.94 g, 51.2 mmol). The resulting solution was stirred at 0 °C for 1.5 hours, then evaporated, followed by extraction with  $\text{CH}_2\text{Cl}_2$ - $\text{H}_2\text{O}$ . The combined organic layer was dried over

15  $\text{MgSO}_4$ , filtered, and evaporated to dryness to give a white solid (280) (10.3 g, 100%,  $M=287$ ).

20      D.      Preparation of Compound (281).

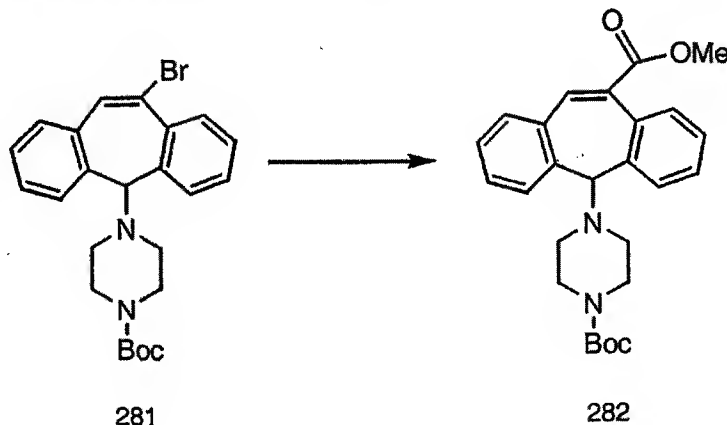

To a stirred solution of the alcohol (280) from Step C (10.0 g, 34.8 mmol) in

25  $\text{CH}_2\text{Cl}_2$  (200 ml) at 0 °C was added 2,6-lutidine (14.9 g, 139.3 mmol) and thionyl chloride (8.28 g, 69.66 mmol). The resulting solution was warmed to room temperature and stirred overnight. The solution was then poured onto 0.5N NaOH solution, followed by extraction with  $\text{CH}_2\text{Cl}_2$ . The combined aqueous layer was dried

over  $\text{Na}_2\text{SO}_4$ , filtered, and concentrated to dryness to give a crude brown oil (15.5 g). To a solution of this crude oil (15.5 g) in acetonitrile (200 ml) was added 2,6-Bis (dimethyl)-1-methyl piperidine (10.81 g, 69.66 mmol) and N-Boc piperidine (6.49 g, 34.83 mmol). The resulting mixture was warmed to 65 °C overnight. The mixture was  
5 evaporated to dryness, followed by extraction with  $\text{CH}_2\text{Cl}_2$ /saturated  $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , concentrated and purified by column chromatography on silica gel, eluting with 5% EtOAc/95% Hexane to give the protected N-Boc compound (281) (5.68 g, 36% yield,  $\text{MH}^+=455$ ).

10

E. Preparation of Compound (282).

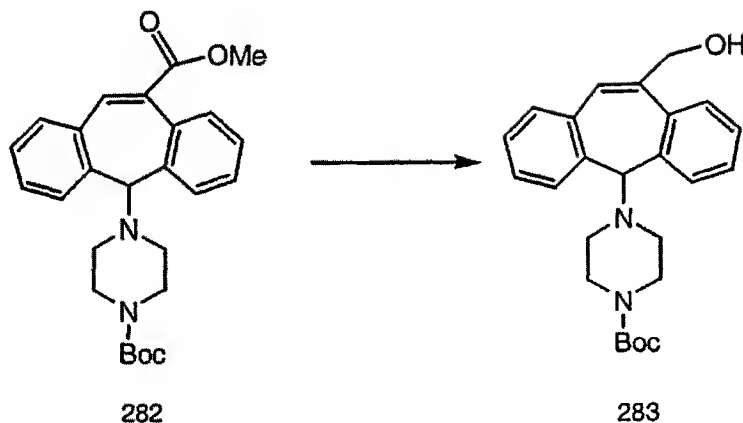

15

To a solution of the N-Boc compound (281) from Step D (4.0 g, 8.78 mmol) in anhydrous toluene (100 ml) and methanol (20 ml) was added triphenylphosphine (1.15 g, 4.39 mmol), DBU (1.81 g, 11.9 mmol) and palladium (II) chloride (0.15 g, 0.88 mmol). The resulting mixture was purged with carbon oxide at 80 psi to 100 psi and  
20 heated to 78 °C-82 °C for 5 hours, followed by stirring at room temperature for overnight. The solution was then extracted with EtOAc. The combined organic layer was washed with water, brine, dried over  $\text{Na}_2\text{SO}_4$ , filtered, evaporated and the crude product was purified by column chromatography on silica gel, eluting with 10% EtOAc/90% Hexane to give the ester compound (282) (2.1 g, 55% yield,  $\text{MH}^+=435$ ).

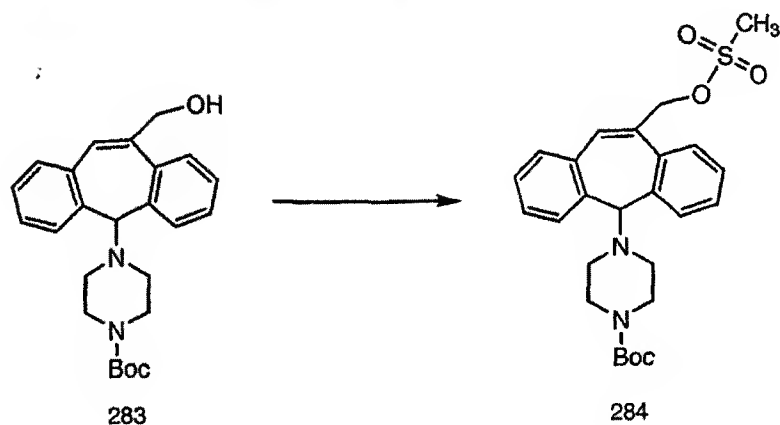

25

#### F. Preparation of Compound (283).

To a stirred solution of the ester compound (282) from Step E (1.2 g, 2.77 mmol) in THF (15 ml) at 0 °C was added a 1M solution of DIBAL (16.62 ml, 16.62 mmol). The resulting solution was stirred at room temperature for 4 hours. To the solution was then added 10% potassium sodium tartarate, followed by extraction with EtOAc. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and evaporated to give a solid (283) (1.1 g, 100% yield, MH<sup>+</sup>=406).

**G. Preparation of Compound (284).**

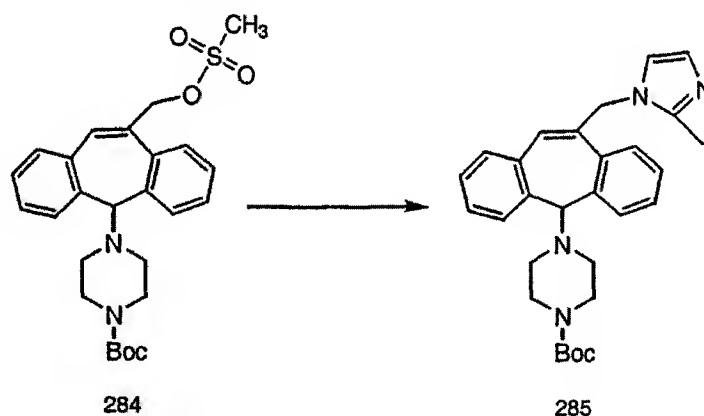

To a solution of the alcohol (283) from Step F (0.62 g, 1.52 mmol) in  $\text{CH}_2\text{Cl}_2$  (15 ml) under nitrogen was added triethyl amine (0.64 ml, 4.56 mmol) and methane sulfonyl chloride (0.26 g, 2.29 mmol). The resulting solution was stirred at room temperature overnight. The mixture was washed with  $\text{NaHCO}_3$  solution, dried over  $\text{Na}_2\text{SO}_4$ ,

194

filtered and concentrated to dryness to give the mesylate compound (284) (0.53 g, 76% yield,  $M-\text{CH}_3\text{SO}_3\text{H}=389.1$ ).

## 5 H. Preparation of Compound (285).

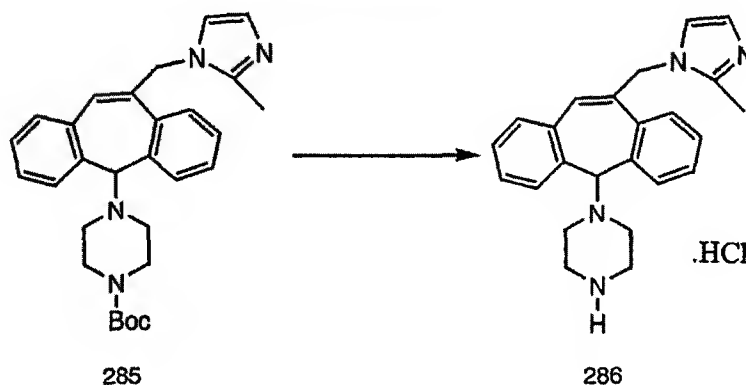

10

To a stirred solution of 1-methyl-imidazole (1.04 g, 12.7 mmol) in DMF (10 ml) under nitrogen, was added NaH (0.305 g, 12.7mmol). The resulting solution was stirred at room temperature for 15 minutes, followed by the addition of the mesylate compound (284) from step G (2.05 g, 4.23 mmol). The reaction mixture was stirred at room temperature overnight, then evaporated to dryness, and extracted with an EtOAc-NaHCO<sub>3</sub> solution. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated and the crude product purified by silica gel column chromatography eluting with 2% MeOH/98% NH<sub>3</sub>-CH<sub>2</sub>Cl<sub>2</sub> to give the product (285) (0.775 g, 39% yield, MH<sup>+</sup>=471).

20

I. Preparation of Compound (286).

A solution of the product (285) from step H (0.3 g, 0.64 mmol) in 4M HCl in dioxane (40 ml) was stirred at room temperature for 3 hours and then concentrated to dryness to give the hydrochloride salt of the title product (286) (0.42 g, 100% yield,  $MH^+=371$ ).

5

EXAMPLES 114 AND 115Compounds (287) AND (288).

The racemic mixture of Preparative Example 33, Step H above was separated into its pure Isomers by HPLC, using a Chiral AD column eluting with 15% IPA/75% Hexane/0.2% DEA to afford the compounds in the table below:

10

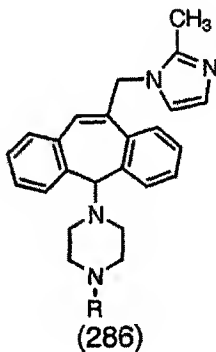

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
114	Prep. Ex. 33, Steps A-H	BOC	287 isomer 1	MS $M^+=471$
115	Prep. Ex. 33, Steps A-H	BOC	288 isomer 2	MS $M^+=471$

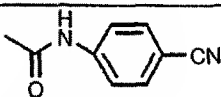

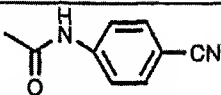

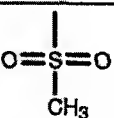

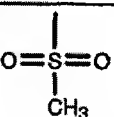

15

EXAMPLES 116-119.

Starting with the piperazine compound (286) from Preparative Example 33 Step I, and reacting it with the appropriate isocyanate or sulfonyl chloride, following essentially the same procedure as indicated in the table below, the following compounds were prepared:

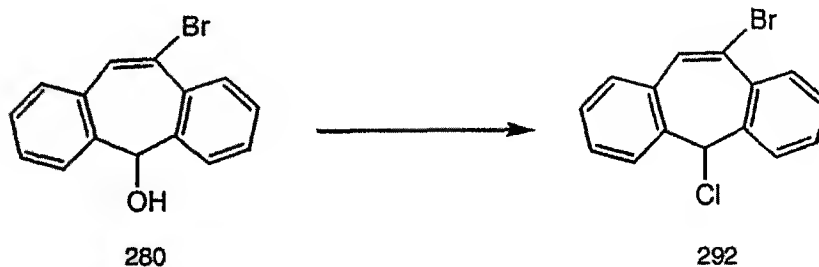

20

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
116	Example 13		289 isomer 1	MS M <sup>+</sup> =515
117	Example 13		290 isomer 2	MS M <sup>+</sup> =515
118	Example 24		291a isomer 1	MS M <sup>+</sup> =449
119	Example 24		291b isomer 2	MS M <sup>+</sup> =449

#### PREPARATIVE EXAMPLE 34

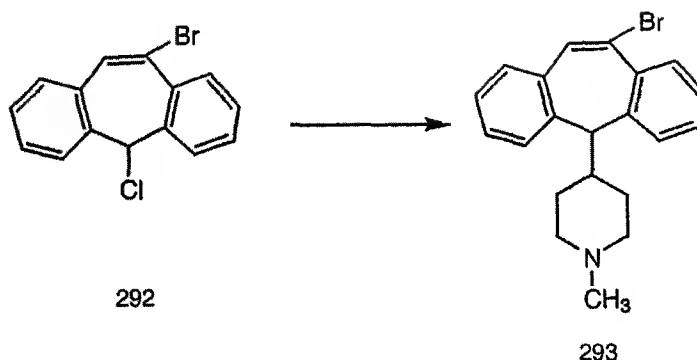

##### 5. A. Preparation of Compound (292).

10

To a stirred solution of alcohol (280) from Preparative Example 33, Step C (30.0 g, 104.5 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (500 mL) under nitrogen at -20 °C was added thionyl chloride (106.7 mL, 1.46 mmol). The resulting solution was stirred at room temperature overnight and then evaporated to dryness. The crude mixtue was diluted with toluene (50 mL), followed by the addition of more SOCl<sub>2</sub> (106.7 mL) at room temperature. The resulting solution was heated to reflux for 2 hours until the reaction went to completion. The reaction mixture was then cooled to room temperature and concentrated to dryness to give a light brown solid (292) (35.67 g, 100% yield, M-BrCl=191).

20

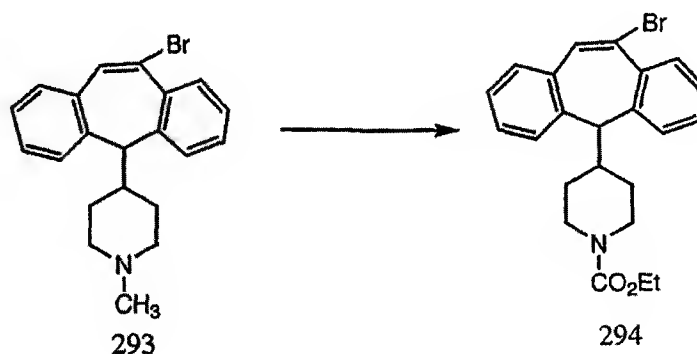

B. Preparation of Compound (293).

5

To a suspension of Mg (3.63 g) in anhydrous THF (95 mL) under nitrogen at room temperature was added 4-chloro-1-methyl piperidine (3 mL, 10% of the total amount) and one small crystal of iodine. The resulting solution was heated to reflux, followed by the addition of iodomethane (0.5 mL) and the remainder of the 4-chloro-1-methyl piperidine (27 mL). The reaction was stirred for one hour and then concentrated to dryness to give the crude Grignard reagent (0.8M).

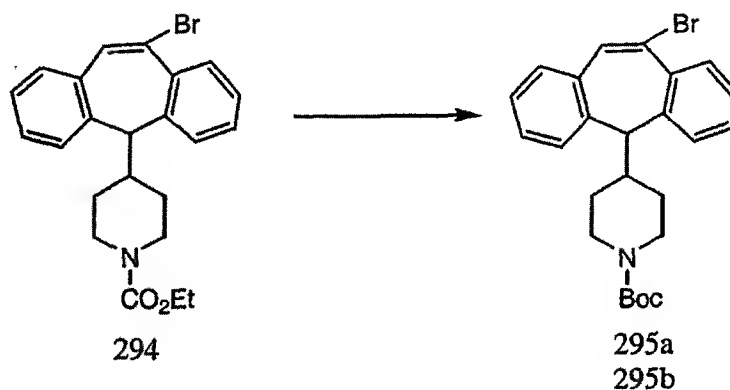

To a stirred solution of the chloro compound (292) from Preparative Example 34, Step A (35.67 g, 116.7 mmol) in anhydrous THF (200 mL) under nitrogen at room temperature, was added dropwise the Grignard reagent (as obtained above) (0.8M, 146 mL, 116.7 mmol). The resulting solution was stirred at room temperature for 3 hours, followed by the extraction with EtOAc-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered and evaporated to dryness to give the product (293) (49.25 g, 100% yield, MH<sup>+</sup>=368).

20

C. Preparation of Compound (294).

To a stirred solution of Compound (293) from Step B above (42.9 g, 116.5 mmol) in toluene (400 mL) under nitrogen was added triethylamine (49 mL, 349.5 mmol). The resulting solution was heated to reflux, followed by the dropwise addition of ethyl chloroformate (126 g, 1165 mmol). Continued to heat the solution at the reflux temperature for 2 hours. The reaction was then stirred at room temperature overnight, followed by extraction with an EtOAc-1N NaOH solution. The combined organic layer was dried over  $\text{MgSO}_4$ , filtered, concentrated to dryness and the crude product purified by column chromatography on normal phase silica gel, eluting with 30% EtOAc/70% Hexane to give a light yellow solid (294) (2.99 g, 12% yield,  $\text{MH}^+=426.3$ ).

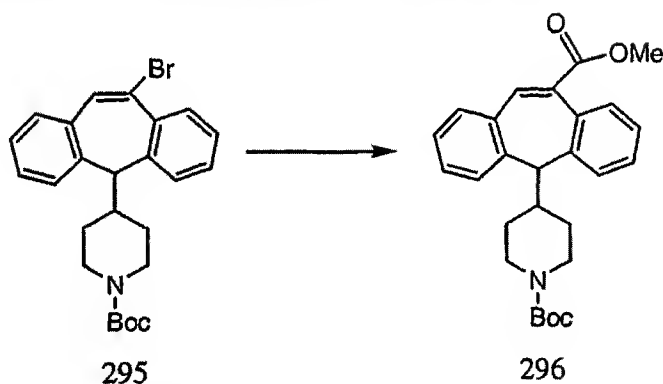

D. Preparation of Compounds (295a) and (295b).

A solution of the ester (294) from step C above (3.34 g, 7.83 mmol) in 6N HCl (20 mL) was heated to reflux overnight. The reaction was cooled to room temperature and basified with  $\text{NH}_4\text{OH}$  solution, followed by extraction with  $\text{CH}_2\text{Cl}_2$ . The combined organic layer was dried over  $\text{MgSO}_4$ , filtered, and evaporated to dryness to give a crude free piperidine (2.80 g, 100% yield,  $\text{MH}^+=534$ ).

To the crude material (as obtained above) (2.77 g, 7.82 mmol) in 50% MeOH/1%  $\text{H}_2\text{O}$  (200 mL) was added Di-tert-butyl dicarbonate (3.41 g, 15.64 mmol). The reaction mixture was adjusted to pH=9 and stirred at room temperature for 4 hours, evaporated to dryness then extracted with  $\text{CH}_2\text{Cl}_2$ - $\text{H}_2\text{O}$ . The combined organic layer was dried over  $\text{MgSO}_4$ , filtered, concentrated to dryness and purified by HPLC, using chiral AD column, eluting with 15% IPA/75% Hexane/0.2% DEA to give the pure isomers of the N-Boc compounds (295a) and (295b) (3.42 g, 96% yield,  $\text{MH}^+=454$ ).

E. Preparation of Compounds (296a) and (296b)

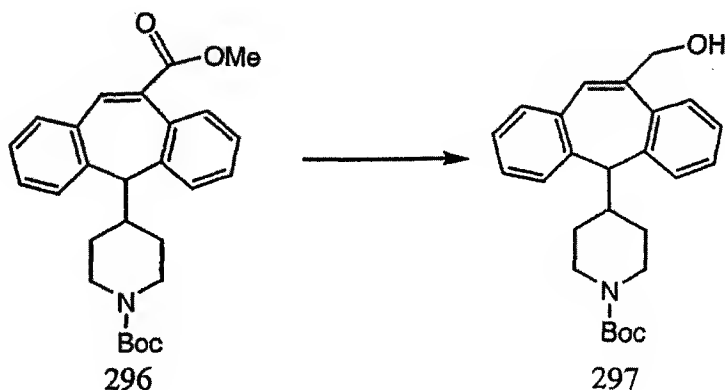

5

To a stirred solution of the pure (+) or (-) isomer of the N-Boc compound from Step D above (4.0 g, 8.78 mmol) in anhydrous toluene (100 mL) and methanol (20 mL) was added triphenyl phosphine (1.15 g, 4.39 mmol), DBU (1.81 g, 11.9 mmol) and palladium (II) chloride (0.15 g, 0.88 mmol). The resulting mixture was purged with carbon monoxide at 80 psi to 100 psi and heated to 78 °C-82 °C for 5 hours, followed by stirring at room temperature overnight. The solution was then extracted with EtOAc. The combined organic layer was washed with water, brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, evaporated and purified by column chromatography on silica gel, eluting with 10% EtOAc/ 90% Hexane to give the ester (296a) or (296b) (2.1 g, 55% yield, MH<sup>+</sup>=435).

15

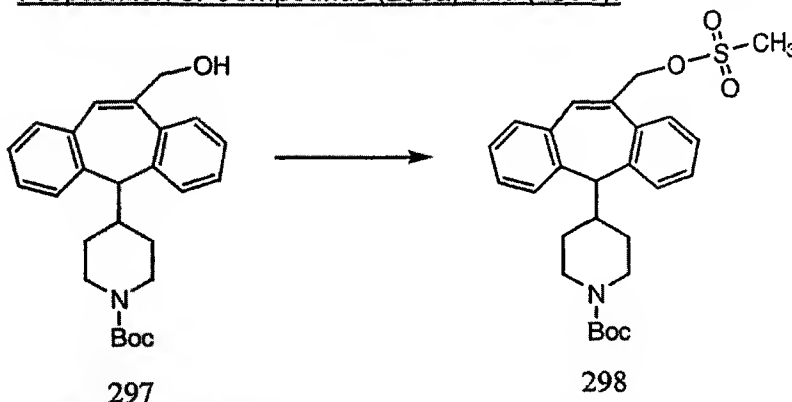

F. Preparation of Compounds (297a) and (297b).

20

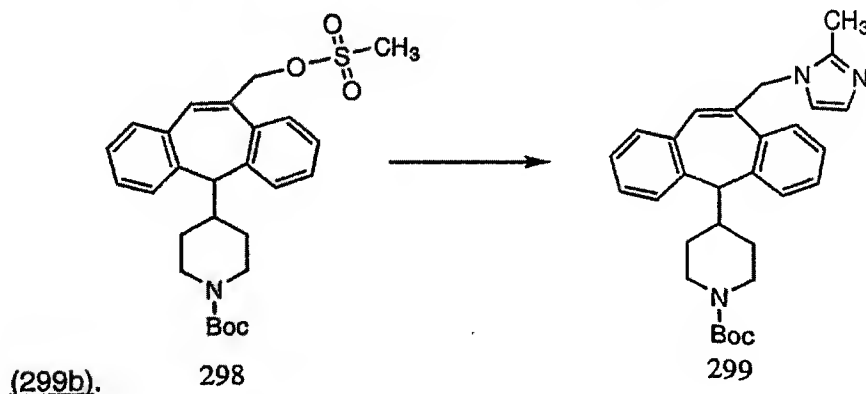

To a stirred solution of the (+) or (-) isomer of the ester from Step E above, (1.2 g, 2.77 mmol) in THF (15 mL) at 0 °C was added 1M solution of DIBAL (16.62 mL, 16.62 mmol). The resulting solution was stirred at room temperature for 4 hours. To the solution was then added 10% potential sodium tartarate, followed by extraction with EtOAc. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered, and evaporated to give a solid (297a) or (297b) (1.1 g, 100% yield, MH<sup>+</sup>=406).

G. Preparation of Compounds (298a) and (298b).

To a stirred solution of the (+) or (-) isomer of the alcohol from Step F, above (0.62 g, 1.52 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (15 mL) under nitrogen was added triethyl amine (0.64 mL, 4.56 mmol) and methane sulfonyl chloride (0.26 g, 2.29 mmol). The resulting solution was stirred at room temperature for overnight. The mixture was washed with NaHCO<sub>3</sub> solution, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give the mesylate compound (298a) or (298b) (0.53 g, 76% yield, M-CH<sub>3</sub>SO<sub>3</sub>H=389.1).

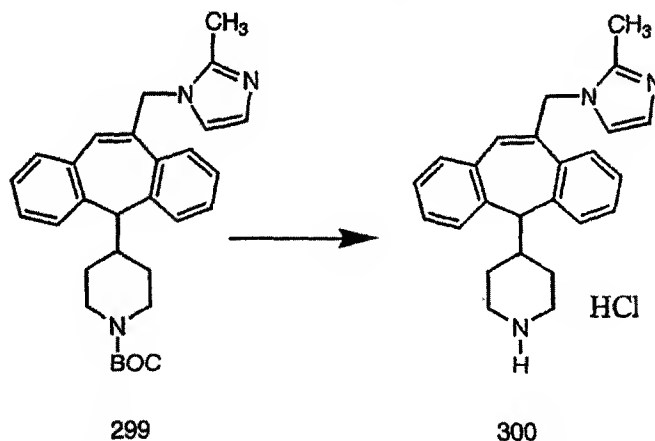

H. Preparation of Compounds (299a) and

To a stirred solution of 1-methyl-imidazole (1.04 g, 12.7 mmol) in DMF (10 mL) under nitrogen, was added NaH (0.305 g, 12.7 mmol). The resulting solution was

stirred at room temperature for 15 minutes, followed by the addition of the (+) or (-) isomer of the mesylate compound (299) from Step G above (2.05 g, 4.23 mmol). The reaction mixture was stirred at room temperature overnight then evaporated to dryness, followed by extraction with an EtOAc-NaHCO<sub>3</sub> solution. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated and the crude product was purified by silica gel column chromatography, eluting with 2% MeOH/98% NH<sub>3</sub>-CH<sub>2</sub>Cl<sub>2</sub> to give the product (299a) or (299b) (0.775 g, 39% yield, MH<sup>+</sup>=471).

10 I. Preparation of Compounds (300a) and (300b).

A solution of the (+) or (-) isomer of the product from Step I above (0.3 g, 0.64 mmol) in 4M HCl in dioxane (40 mL) was stirred at room temperature for 3 hours and then concentrated to dryness to give the HCl salt of the product (300a) or (300b) (0.42 g, 100% yield, MH<sup>+</sup>=371).

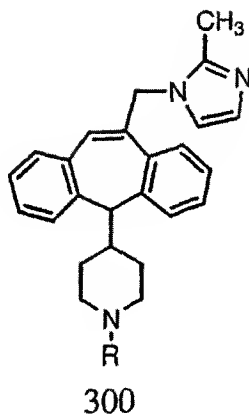

EXAMPLES 120 AND 121

20

Starting with the appropriate (+) or (-) isomer of Compound (300) and reacting in a similar manner as in Example 13 using the appropriate isocyanate, the following compounds were prepared:

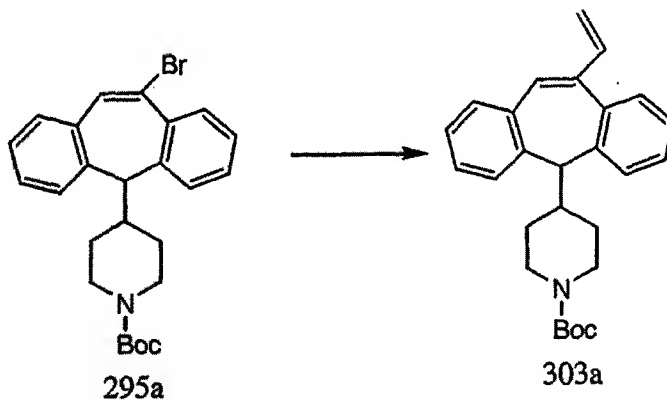

25

202

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
120	Example 13		301 isomer 1	MS MH <sup>+</sup> =514
121	Example 13		302 isomer 2	MS MH <sup>+</sup> =514

5

PREPARATIVE EXAMPLE 35A. Preparation of Compound (303a).

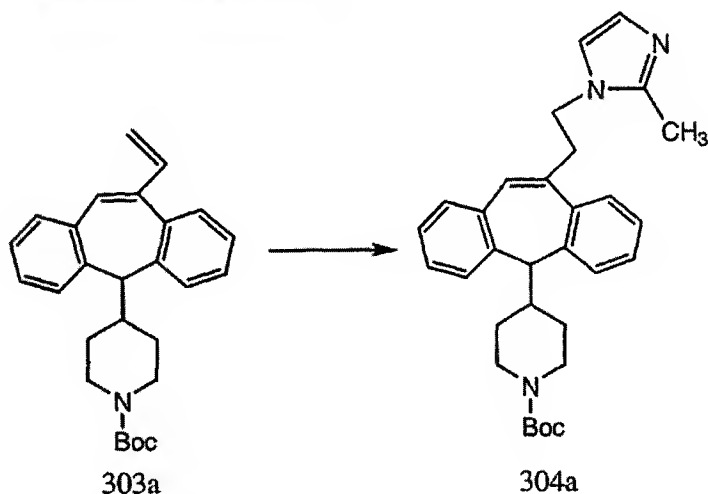

10

To a stirred solution of isomer 1 of the bromo-compound (295a) from Preparative Example 34, Step D, (0.5 g, 1.10 mmol) in 1-methyl-2-pyrrolidinone (4.3 mL) under nitrogen, was added lithium chloride (0.14 g, 3.3 mmol), tri-2-furylphosphine (0.013 g, 0.04 mmol) and tris(dibenzylideneacetone)-dipalladium(0) (0.02 g, 0.02 mmol). The resulting solution was stirred at room temperature for 5

15

minutes, followed by the addition of tributyl (vinyl) tin (0.39 g, 1.24 mmol). The reaction was then heated to 85°C for 2 hours, followed by extraction with EtOAc-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on normal phase silica gel, eluted with 10% EtOAc/90% CH<sub>2</sub>Cl<sub>2</sub> to give a light yellow liquid (303a) (0.06 g, 15% yield, MH<sup>+</sup>=390).

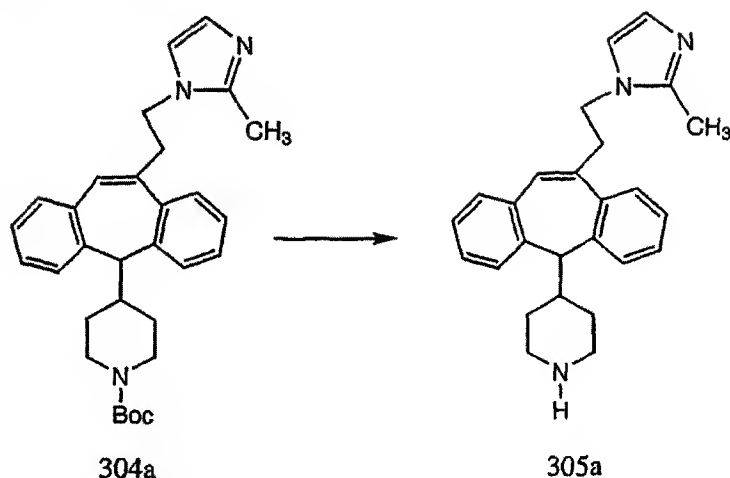

B. Preparation of Compound (304a).

10

To a stirred solution of 1-methyl imidazole (0.377 g, 4.6 mmol) in anhydrous THF (4mL) under nitrogen at -78°C, was added 2.5M n-BuLi/Hexane (0.33 mL). The resulting solution was stirred at -78°C for 30 minutes and then allowed to warm at room temperature. To this stirred solution was added the alkene compound (303a) from step A above, (0.78 g, 2.1 mmol) in THF. The resulting solution was then heated to 120°C overnight then cooled to room temperature, and extracted with EtOAc-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, evaporated and purified by column chromatography on normal phase silica gel, eluted with 3% MeOH/97% NH<sub>3</sub>-CH<sub>2</sub>Cl<sub>2</sub> to give a light yellow solid (304a) (0.09 g, 10% yield, MH<sup>+</sup>=456.1).

15

C. Preparation of Compound (305a).

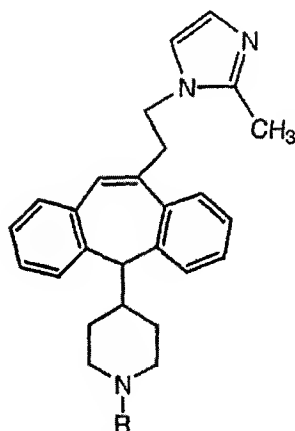

- 5        A solution of the product (304a) from Step B above (0.18 g, 3.72 mmol) in 4M HCl/dioxane (5 mL) was stirred at room temperature for 2 hours, then concentrated to dryness to give a crude off white solid (305a) (0.22 g, 100% yield,  $MH^+=384.2$ ).

- 10        Using the same procedure as defined in Preparative Example 35 above starting with Isomer 2 of the Boc-protected Bromo compound (295b), Isomer 2 (305b) was prepared ( $MH^+=384.2$ ).

EXAMPLES 122 - 125

- 15        Starting with the appropriate (+) or (-) isomer of Compound (305) and reacting in a similar manner as in Example 13 using the appropriate isocyanate, the following compounds were prepared:

205

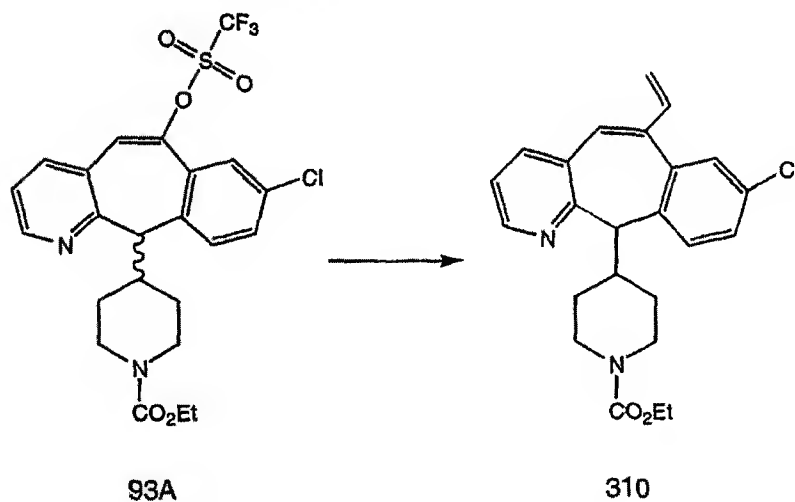

305

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
122	Example 13		306 isomer 1	MS MH <sup>+</sup> =537.1 m.p.=118.1-119.0°C
123	Example 13		307 isomer 2	MS MH <sup>+</sup> =537.1 m.p.=107.8-108.4°C
124	Example 13		308 isomer 1	MS MH <sup>+</sup> =528.2 m.p.=119.6-120.2°C
125	Example 13		309 isomer 2	MS MH <sup>+</sup> =528.2 m.p.= 120.5-121.3°C

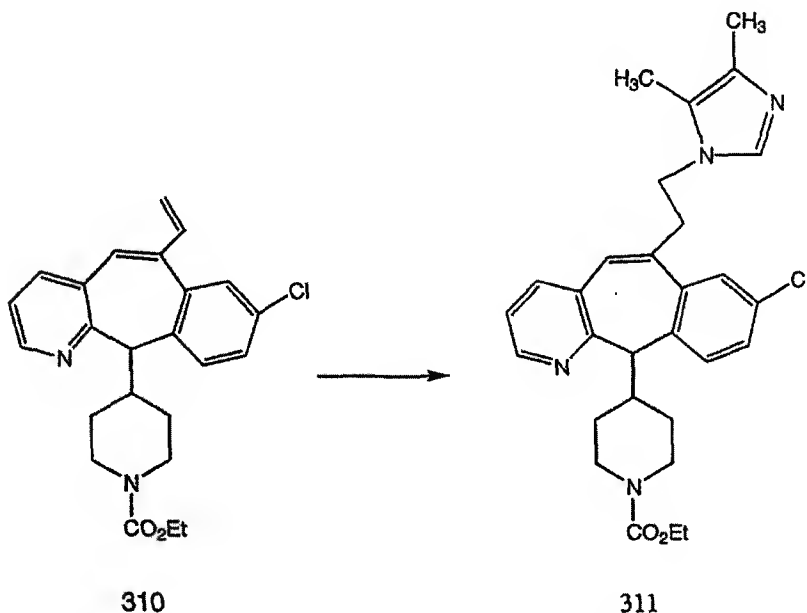

PREPARATIVE EXAMPLE 36A. Preparation of Compound (310)

5

To a solution of Compound (93A) from Example 7, Step A (5.0g, 10.02 mmol) in 1-methyl-2-pyrrolidinone (40 mL) under nitrogen at room temperature, was added LiCl (1.27g, 30.06 mmol), Tri-2-furylphosphine (0.093g, 0.4 mmol) and tris(dibenzylidene acetone)dipalladium(0) (0.18g, 0.2 mmol). The resulting solution was stirred at room temperature for 5 minutes, followed by the addition of tributyl(vinyl) tin (3.3 mL, 11.3 mmol) and stirred overnight at 80 °C-85 °C. The solution was cooled to room temperature, followed by extraction with EtOAc-H<sub>2</sub>O. The organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluted with 20% EtOAc/80% CH<sub>2</sub>Cl<sub>2</sub> to give the product (310) (3.88g, 95% yield, MH<sup>+</sup>=409.1)

B. Preparation of Compound (311).

15

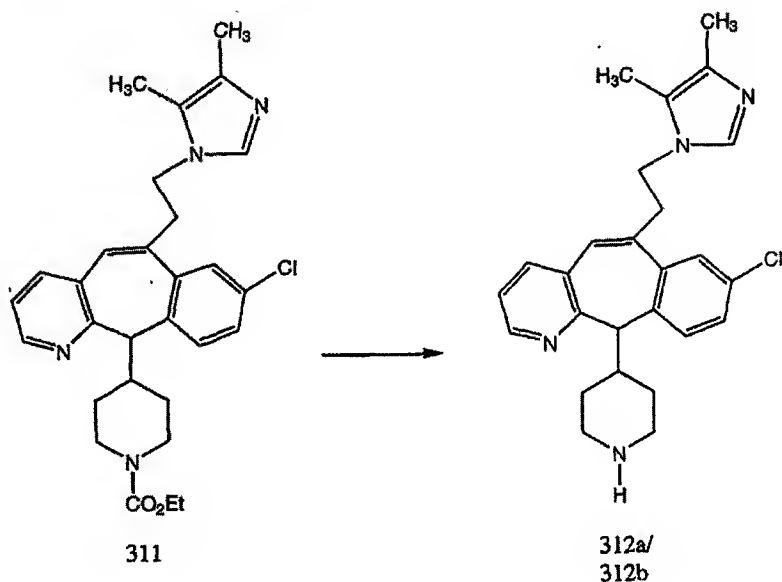

To a stirred solution of 4,5-dimethylimidazole (25.8 mg, 0.268 mmol) in anhydrous THF (0.2 mL) at -78°C under Argon, was added 2.5M n-BuLi (0.032 mL, 0.08 mmol). The resulting solution was warmed to room temperature, followed by the addition of the alkene compound (310) from Step A above (0.1 g, 0.24 mmol) in anhydrous THF (0.2 mL). The solution was then heated in an oil bath to 120°C for 25 hours, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O. The combined organic layer was then washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and purified by column

20

chromatography on silica gel, eluting with 5% MeOH/95% CH<sub>2</sub>Cl<sub>2</sub> to give the product (311) (0.046 g, 100% yield, MH<sup>+</sup>=505).

C. Preparation of Compounds (312a) AND (312b).

5

10 A solution of Compound (311) from Step B above (0.57 g, 1.28 mmol) in 6N HCl (20 mL) was heated to reflux for 24 hours then concentrated to dryness. To the residue was then added saturated NaHCO<sub>3</sub> and NaCl. The solution was extracted twice with CH<sub>2</sub>Cl<sub>2</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to dryness to give the crude product (0.52 g, 93% yield). The crude

15 material was then dissolved in 20% EtOH/80% Hexane/0.2% DEA and purified by HPLC on a preparative AD column, eluting with 20%-50% IPA/Hexane/0.2% DEA (UV=254nm, Attn=1024, ABS=2) to give pure isomers of the product (312a) and (312b) (0.225 g, MH<sup>+</sup>=433).

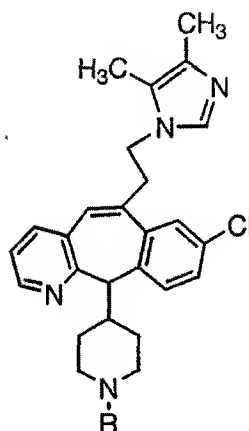

20

EXAMPLES 126-133

Starting with the appropriate (+) or (-) isomer of Compound (312) and reacting in a similar manner as in Example 13 using the appropriate isocyanate or sulfonyl chloride, the following compounds were prepared:

25

208

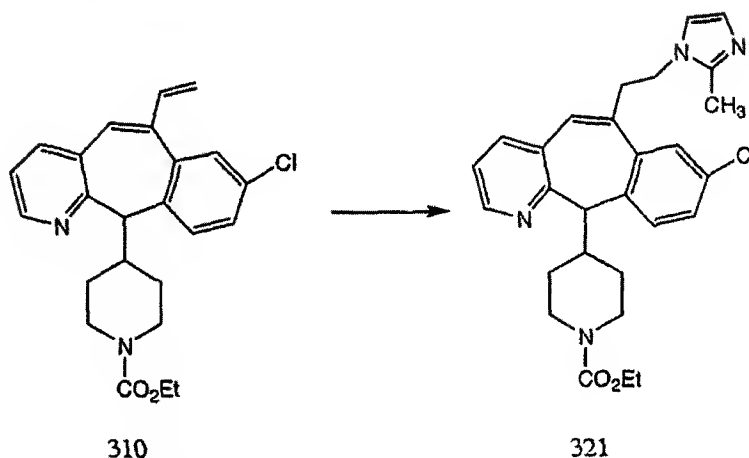

312

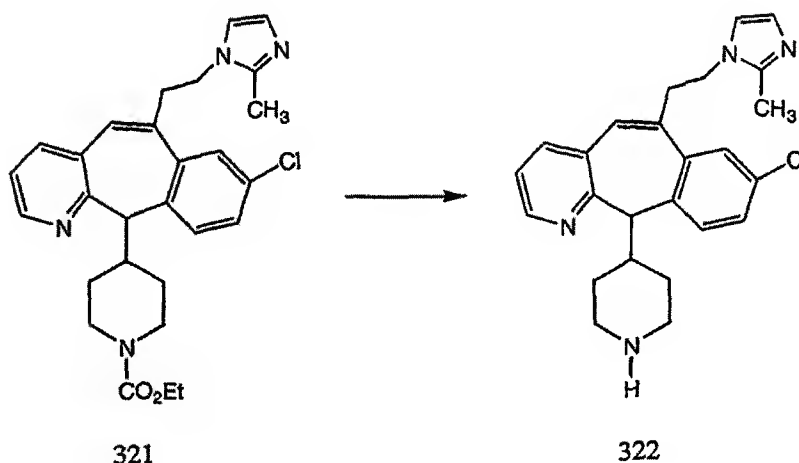

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA

133	Example 13		320	Mass spec. M <sup>+</sup> =511

PREPARATIVE EXAMPLE 37A. Preparation of Compound (321)

5

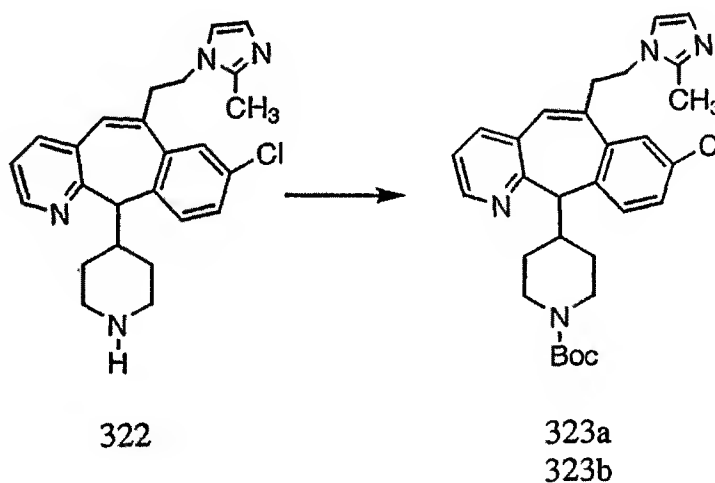

To a solution of Compound (310) from Preparative Example 36, Step A (0.66 g, 8.1 mmol) in THF (4.0 mL) under nitrogen at  $-78^{\circ}\text{C}$ , was added dropwise 2.5M n-BuLi/Hexane (1.5 mL). The resulting solution was stirred at  $-78^{\circ}\text{C}$  for 30 minutes, then allowed to warm to room temperature, followed by the addition of 1-methylimidazole (3.0 g, 7.3 mmol) in THF (3.0 mL). The solution was then heated to  $120^{\circ}\text{C}$  over the weekend and then cooled down to room temperature and concentrated to dryness. The mixture was extracted with EtOAc- $\text{H}_2\text{O}$ , dried over  $\text{MgSO}_4$ , filtered and purified by column chromatography on silica gel, eluting with 3% MeOH/97%  $\text{NH}_3\text{-CH}_2\text{Cl}_2$  to give the product (321) (1.64 g, 46% yield,  $\text{MH}^+=491.1$ ).

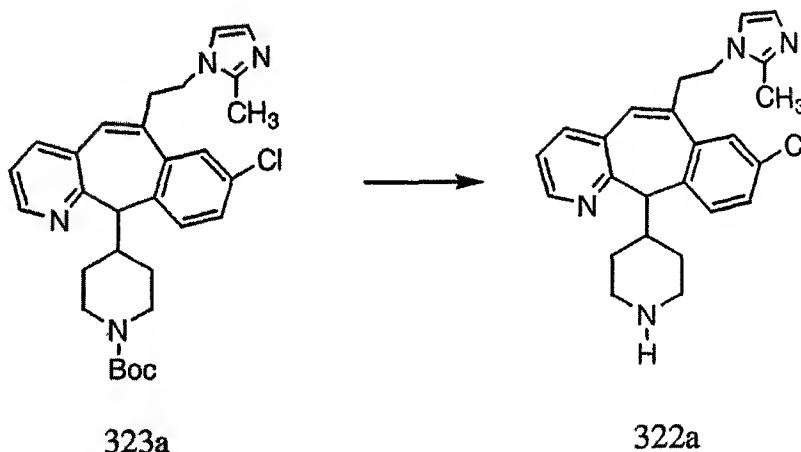

A solution of Compound (321) from Preparative Example 37, Step A above (0.6 g, 1.22 mmol) in 12N HCl (10 mL) was heated to reflux overnight then concentrated to dryness to give the residue as a gum. This residue was dissolved in saturated NaHCO<sub>3</sub>, stirred for 10 minutes, saturated with NaCl and then stirred with CH<sub>2</sub>Cl<sub>2</sub> for 10 minutes. The solid was filtered and the aqueous layer was extracted twice with CH<sub>2</sub>Cl<sub>2</sub>, and the organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give the Compound (322) as a light brown solid (566 mg, MH<sup>+</sup>=419.1).

C. Preparation of Compounds (323a) and (323b).

To a solution of Compound (322) from Step B above (0.566 g, 1.35 mmol) in MeOH (20 mL) and H<sub>2</sub>O (1 mL) at 0°C, was added Boc anhydride (0.44 g, 2.02 mmol). The solution was basified with 1N NaOH solution to maintain pH=8.5-9.5 and concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O. The combined organic layer was washed twice with H<sub>2</sub>O then brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give a mixture of isomers 1 and 2 (0.63 g, 100% yield). The isomers were separated by HPLC on a prep AD column, eluting with 15%IPA/85%hexane/0.2%DEA (wave length=254nm, Attn=64, ABS=1) to give isomer 1 (323a) (0.28 g, MH<sup>+</sup>=519.2) and isomer 2 (323b) (0.28 g, MH<sup>+</sup>=519.2).

D. Preparation of Compound (322a).

5

A solution of Compound (323a) isomer 1 from Step C above (0.24 g, 0.46 mmol) in 4N HCl/Dioxane (20 mL) was stirred at room temperature for 1 hr. CH<sub>2</sub>Cl<sub>2</sub> (7 mL) was added to the solution and the reaction continued to stir for 2 hrs before being concentrated to dryness. The solution was stirred for 5 minutes with saturated NaHCO<sub>3</sub>, then saturated with NaCl and extracted three times with CH<sub>2</sub>Cl<sub>2</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and evaporated to dryness to give Compound (322a) isomer 1 (0.163 g, 84% yield, MH<sup>+</sup>=419.2).

15

Compound (322b) was prepared in a similar manner as in Step D above, starting with Compound (323b) to give the other isomer (0.193 g, 84% yield, MH<sup>+</sup>=419.2)

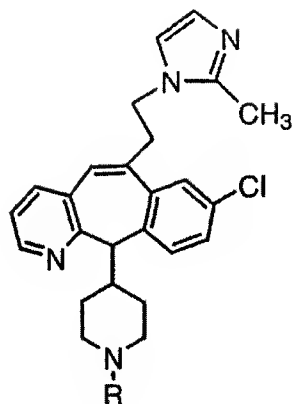

20

EXAMPLES 134-147

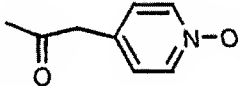

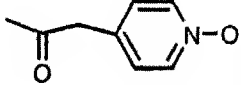

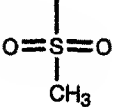

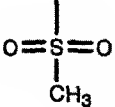

Starting with compound 322a (isomer 1) or 322b (isomer 2) and reacting in a similar manner as in Example 13 using the appropriate chloroformate, isocyanate, or sulfonyl chloride (or in the case of carboxylic acid, using DEC mediated coupling) the following compounds were prepared:

25

212

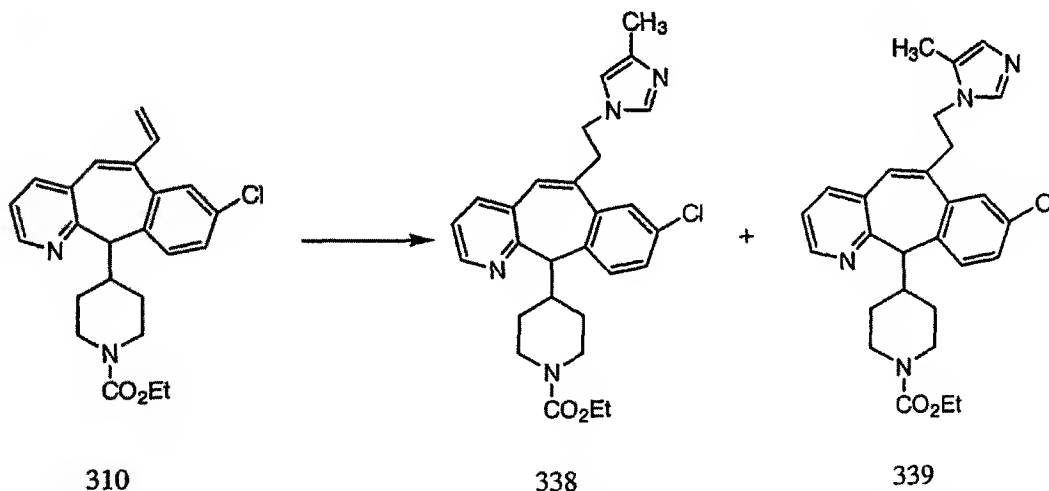

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA

**PREPARATIVE EXAMPLE 38****A. Compounds (338) AND (339).**

5

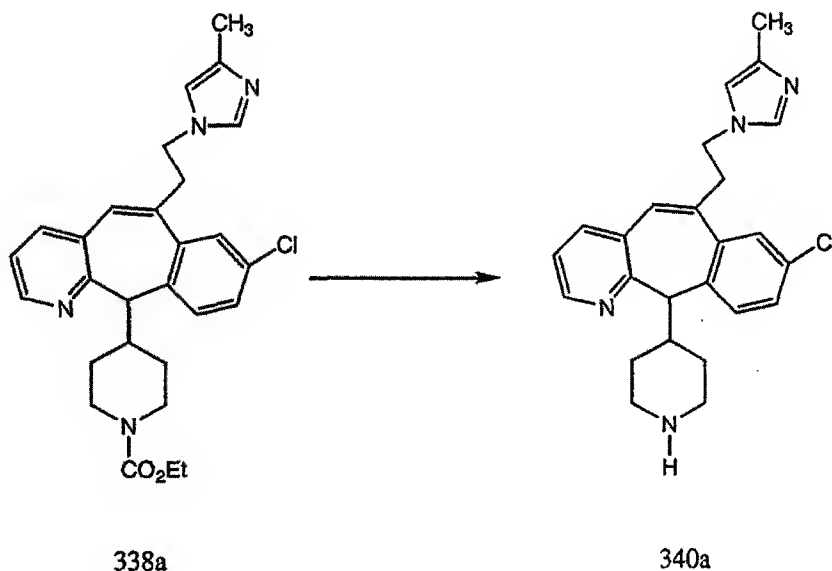

To a solution of Compound (310) from Preparative Example 36 Step A (3.0 g, 7.34 mmol) in THF (8 mL) under nitrogen at -78°C, was added dropwise 2.5M n-BuLi/Hexane (0.65mL, 8.07 mmol). The resulting solution was stirred at -78°C for 30 minutes, then allowed to warm to room temperature, followed by the addition of 4-methylimidazole (0.66 g, 8.07 mmol) in THF. The solution was heated to 120°C over night cooled down to room temperature and concentrated to dryness. The reaction mixture was extracted with EtOAc-H<sub>2</sub>O, and the organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to give a mixture of 4-methyl substituted (338) and 5-methyl substituted (339) products (2.76 g, 76% yield,  $M^+$ =491.1).

B. Separation of compounds (338a/b) and (339a/b).

In a similar manner as described in Example 11, the mixture of products from  
5 Step A, above were first separated into a mixture of pure 4 and 5-substituted (+)  
enantiomers and pure 4 and 5-substituted (-) enantiomers using chiral HPLC column  
chromatography, then upon treatment with triphenyl methyl chloride following the  
procedure in Example 11, the compounds were further separated into the pure  
isomers of the 4-substituted compound (338a) (MS  $M^+=491$ ; mp= 72.1-73.0°C) and  
10 (338b) (MS  $M^+=491$ ; mp= 68.9-69.0°C) and the 5-substituted compound (339a) and  
(339b).

C. Preparation of Compound (340a).

15

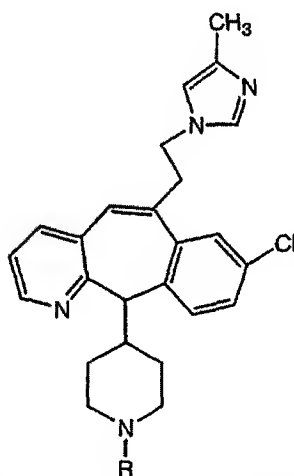

A solution of Compound (338a) from step B above (0.035 g, 0.071 mmol) in 6N  
20 HCl (2.0 mL) was heated to reflux overnight. The solution was cooled to room  
temperature, basified with  $\text{NH}_4\text{OH}$  solution and extracted with  $\text{CH}_2\text{Cl}_2$ . The combined  
organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated to give pure isomer 1,  
Compound (340a) (0.0334 g, 100% yield,  $MH^+=419.1$ ; mp= 60.3-61.0°C).

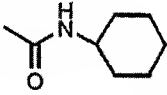

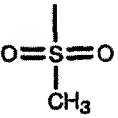

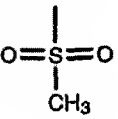

In a similar manner as above, starting with Compound (338b) (isomer 2),  
25 Compound (340b) ( $MH^+=419.1$ ) was prepared.

EXAMPLES 148-156

- 5 Starting with the appropriate (+) or (-) isomer of Compound (340) and reacting in a similar manner using the procedure shown in the table below, with the appropriate chloroformate, isocyanate or sulfonyl chloride, the following compounds were prepared:

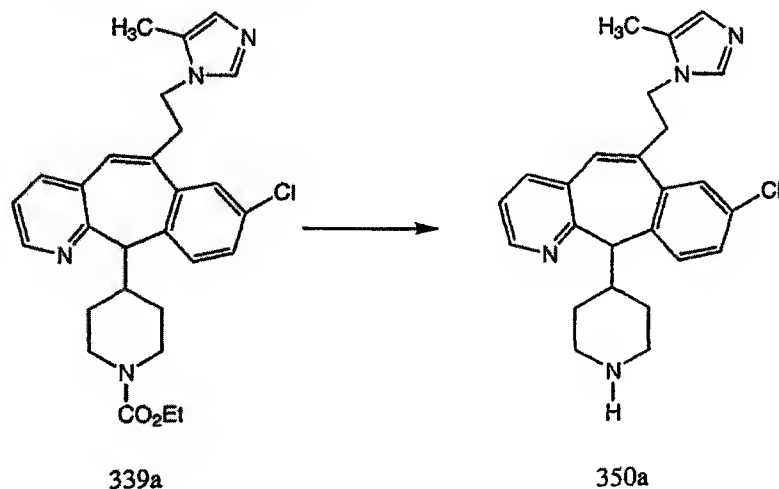

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
148	Preparative Ex.4; Step A	BOC	341	MS MH <sup>+</sup> =519 m.p.=90.2-91.0°C
149	Example 13		342 isomer 1	MS MH <sup>+</sup> =545 m.p.=58.8-59.6°C
150	Example 13		343 isomer 2	MS MH <sup>+</sup> =545 m.p.=60.8-61.2°C
151	Example 13		344 isomer 1	MS MH <sup>+</sup> =545 m.p.=98.7-99.5°C
152	Example 13		345 isomer 2	MS MH <sup>+</sup> =545 m.p.=111.3-112.0°C
153	Example 13		346 isomer 1	MS MH <sup>+</sup> =544 m.p.=77.1-77.8°C

154	Example 13		347 isomer 2	MS MH <sup>+</sup> =544 m.p.=78.9-79.0°C
155	Example 13		348 isomer 1	MS MH <sup>+</sup> =497 m.p.=87.4-88.0°C
156	Example 13		349 isomer 2	MS MH <sup>+</sup> =497 m.p.=88.8-89.0°C

5

**PREPARATIVE EXAMPLE 39**  
**Preparation of Compound (350a).**

10

Compound (339a) was reacted in a similar manner as in Preparative Example 38, Step C to give Compound (350a) (isomer 1) (0.13 g, 76% yield, MH<sup>+</sup>=419.3).

Compound (350b) (isomer 2) was prepared in the same manner as above.

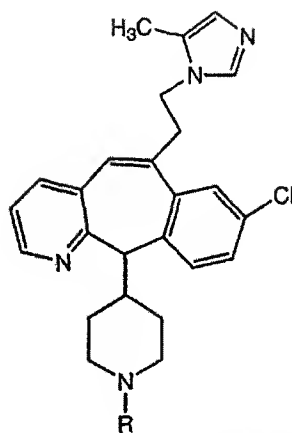

15

**EXAMPLES 157-160**

Starting with the appropriate (+) or (-) isomer of Compound (350) and reacting in a similar manner using the procedure indicated in the table below and the appropriate Boc or isocyanate reagent, the following compounds were prepared:

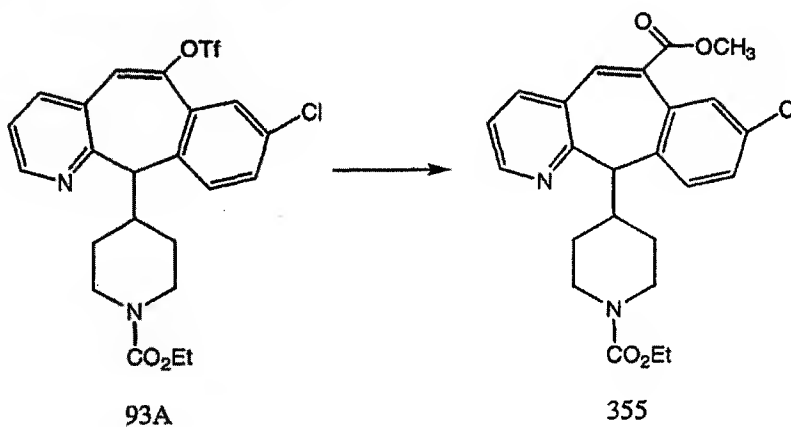

20

217

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
157	Preparative Ex.4; Step A	BOC	351 isomer 1	MS MH <sup>+</sup> =519 m.p.=87.8-88.2°C
158	Preparative Ex.4; Step A	BOC	352 isomer 2	MS MH <sup>+</sup> =519 m.p.=89.0-89.9°C
159	Example 13		353 isomer 1	MS MH <sup>+</sup> =563
160	Example 13		354 isomer 2	MS MH <sup>+</sup> =563 m.p.=130.1-131.0°C

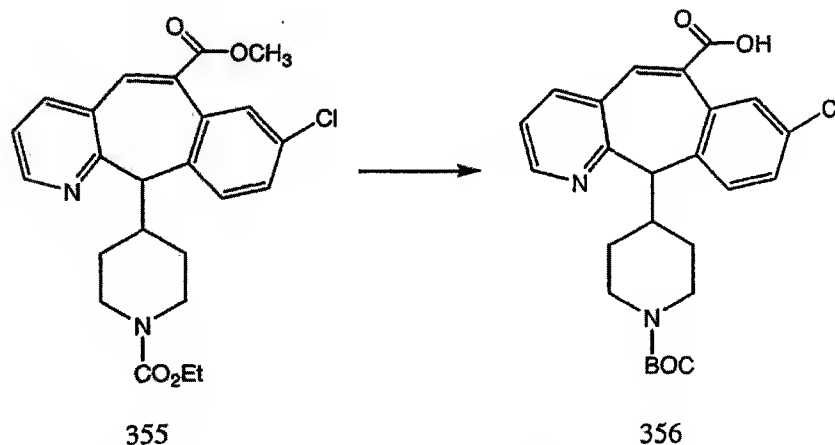

5

PREPARATIVE EXAMPLE 40A. Compound (355).

10

To a solution of Compound (93A) from Preparative Example 7, Step A (2.92 g, 5.5 mmol) in anhydrous toluene (70 mL) and MeOH (10 mL) was added triphenyl phosphine (0.72 g, 2.75 mmol), DBU (1.11 mL, 7.42 mmol) and PdCl<sub>2</sub>(0.097 g, 0.55 mmol). The resulting solution was purged with CO (100psi), then heated to 80°C for five hours. The solution was cooled to room temperature, purged with nitrogen and evaporated to dryness to give a brown oil. The product was purified by silica gel column chromatography eluting with 1% MeOH/99% CH<sub>2</sub>Cl<sub>2</sub> to 4% MeOH/96%CH<sub>2</sub>Cl<sub>2</sub> to give Compound (355) (2.22 g, 92.5% yield, MH<sup>+</sup>=441.1).

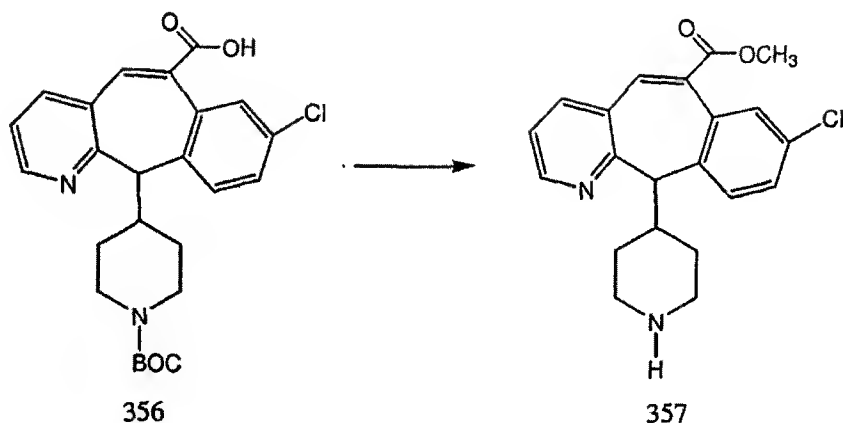

B. Preparation of Compound (356).

A solution of Compound (355) from Preparative Example 40, Step A (2.2 g, 4.99 mmol) in 6N HCl (50mL) was heated to 100°C - 110°C overnight. The solution was cooled to room temperature and evaporated to dryness to give the crude product. To a solution of the crude material in MeOH (50mL) and H<sub>2</sub>O (1 mL) at 0°C, was added Boc anhydride (1.63 g, 7.48 mmol). The resulting solution was basified with 1N NaOH to pH=8.5 - 9.5 and stirred for two hours at 0°C, then evaporated to dryness and extracted with EtOAc-5% Citric acid solution. The organic layer was washed with H<sub>2</sub>O, then brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give Compound (356) as a yellow solid (2.29g, 100% yield, MH<sup>+</sup>=455.1).

C. Preparation of Compound (357).

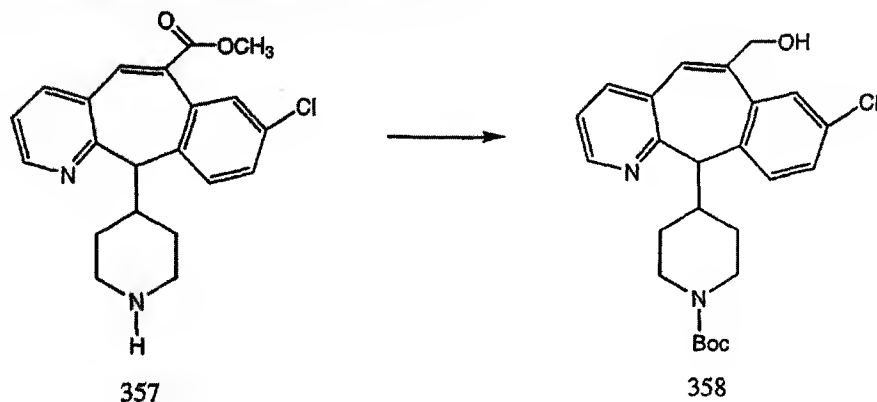

219

To a solution of Compound (356) from Preparative Example 40, Step B above (2.26 g, 4.97 mmol) in anhydrous benzene (18.0 mL) and MeOH (2 mL), was added, over five minutes, (trimethylsilyl)diazomethane (3 mL, 5.99 mmol) in 2M 1N Hexane. The resulting solution was stirred at room temperature for one hour then evaporated to dryness to give 2.33g of crude material ( $MH^+=369$ ).

A solution of the crude material (obtained above) in 4N HCl in Dioxane (25 mL) was stirred at room temperature for one hour. The reaction was then evaporated to dryness and purified by flash silica gel column chromatography, eluting with 2% MeOH/98%  $CH_2Cl_2$  to 6% MeOH/94%  $CH_2Cl_2$  and then with 50% (10%  $NH_4OH/CH_3OH/50\% CH_2Cl_2$ ). The collected fractions were evaporated to dryness and diluted with  $CH_2Cl_2$ . The organic solution was then washed with saturated  $NaHCO_3$  and brine, dried with  $Na_2SO_4$ , filtered and evaporated to dryness to afford Compound (357) (1.26g, 68.3% yield,  $MH^+=369$ ).

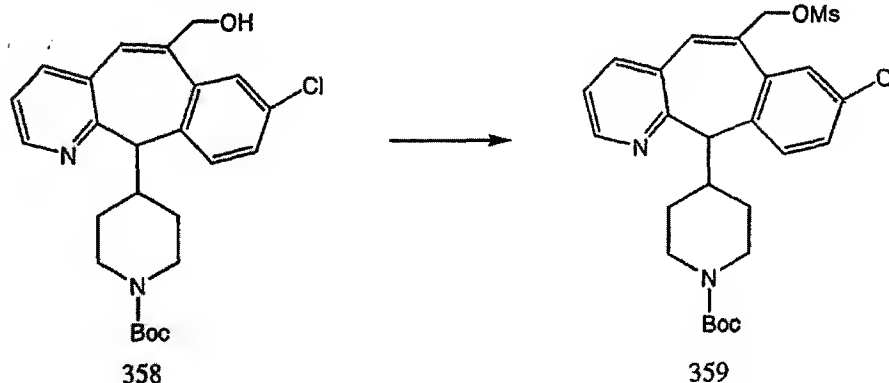

D. Preparation of Compound (358).

To a solution of Compound (357) from Preparative Example 40, Step C (0.6 g, 1.62 mmol) in anhydrous THF (6 mL) at 0°C was added DIBAL (1M solution in toluene) (9.78 mL, 9.78 mmol). The resulting solution was warmed to room temperature and stirred overnight. The solution was then quenched with MeOH and evaporated to dryness to give a crude product.

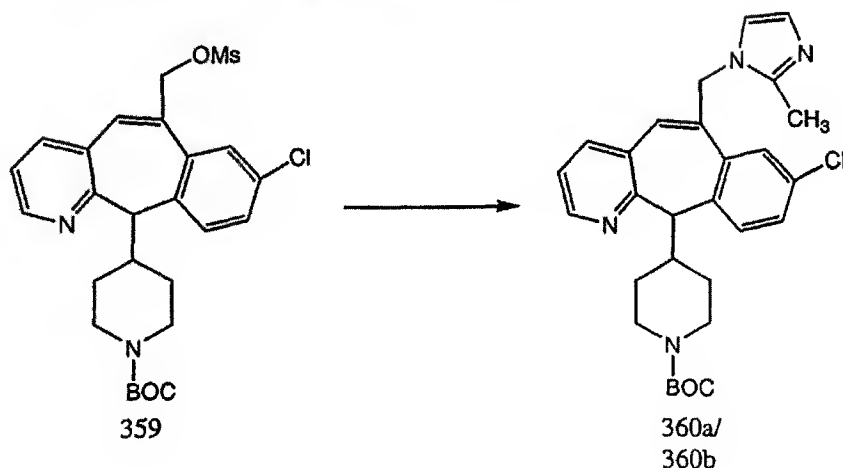

To the crude material (obtained above) in MeOH at 0°C was added Boc anhydride (1.06g, 4.9 mmol). The resulting solution was basified with 1N NaOH to pH=8.5-9.5, stirred for 1 hour and evaporated to dryness. The crude material was diluted with CH<sub>2</sub>Cl<sub>2</sub> to give a slurry. The precipitate was then filtered through celite and the CH<sub>2</sub>Cl<sub>2</sub> was washed with H<sub>2</sub>O, brine, filtered over Na<sub>2</sub>SO<sub>4</sub> and concentrated to dryness. The crude alcohol product (358) (1.27g, 100% yield) was used in the next step without further purification.

E. Preparation of Compound (359).

To a cooled solution of the alcohol (358) from Step D above (1.2 g, 2.73 mmol) in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (12 mL) at 0°C was added triethyl amine (1.14 mL, 8.18 mmol) and methanesulfonyl chloride (0.3 mL, 4.1 mmol). The resulting solution was warmed to room temperature stirred overnight, then quenched with H<sub>2</sub>O and stirred for 10 minutes. The reaction was washed with water, then brine, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and evaporated to dryness to give Compound (359) (1.22 g, 86% yield).

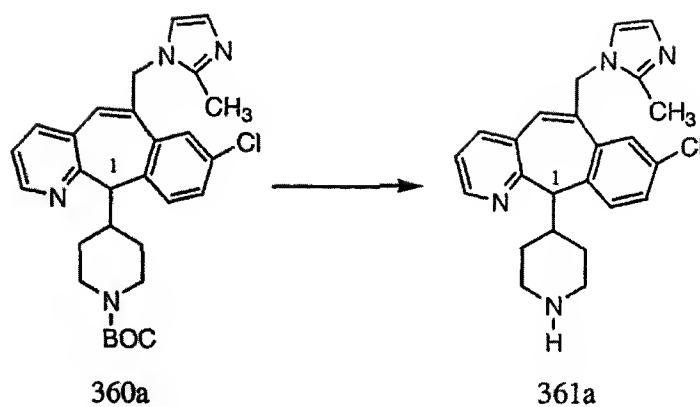

F. Preparation of Compounds (360a) AND (360b).

- 5 To a solution of anhydrous DMF (5 mL) at 0°C was added, NaH (0.19 g, 8.18 mmol) and 2-methylimidazole (0.67 g, 8.18 mmol). The resulting solution was warmed to room temperature and stirred for 20 minutes. To the reaction was added a solution of Compound (359) from Step E above (1.22 g, 2.3 mmol) in anhydrous DMF (5 mL). The resulting of solution was stirred at room temperature overnight, then diluted with
- 10 EtOAc and washed with water then brine. The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated to dryness and purified by silica gel column chromatography eluting with 1% MeOH/99% CH<sub>2</sub>Cl<sub>2</sub> to 5%MeOH/CH<sub>2</sub>Cl<sub>2</sub> to give the product as a mixture of isomers (1.18 g, 100% yield, MH<sup>+</sup>=505.2). Separation of the product mixture by HPLC using a prep AD column, eluting with 25%IPA/75%hexane/0.2%DEA (isocratic 60
- 15 ml/min.) afforded pure isomer 1 (360a) (0.251 g, MH<sup>+</sup>=505.1) and isomer 2 (360b) (0.251 g, MH<sup>+</sup>=505.1) as light pink solids.

G. Preparation of Compounds (361a) AND (361b).

222

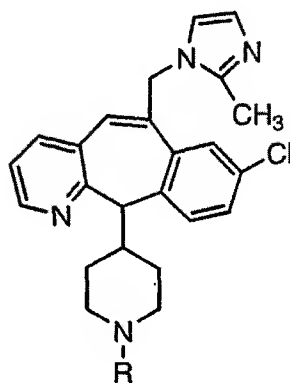

A solution of Compound (360a) (isomer 1) from Step F above (0.2 g, 0.4 mmol) in 4N HCl in Dioxane (10 mL) was stirred at room temperature for 2 hours and then  
5 evaporated to dryness to afford Compound (361a) (0.292 g, 100% yield).

Compound (361b) (isomer 2) was prepared in a similar manner as above beginning with Compound (360b) from Preparative Example 40, Step F.

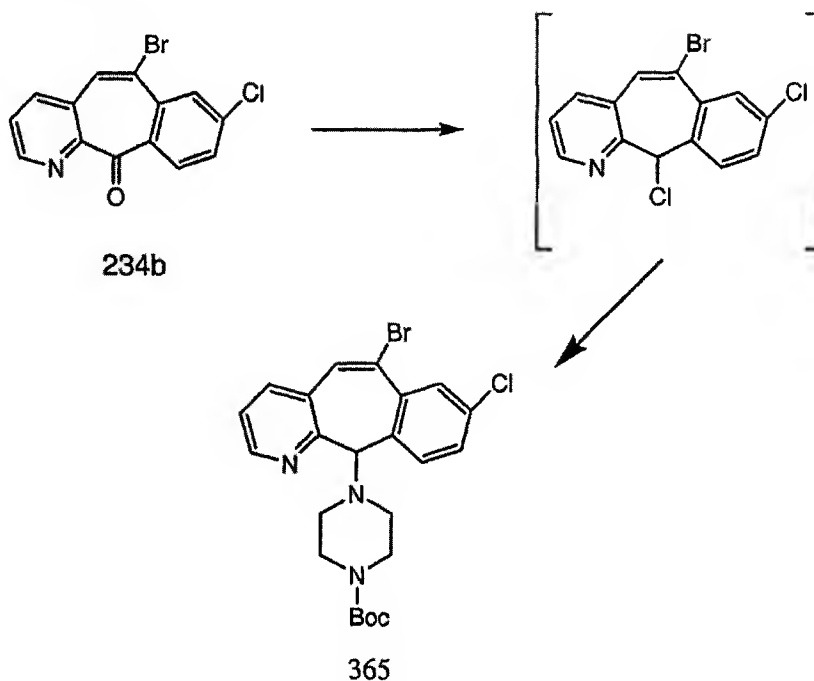

EXAMPLES 161-166

Starting with the appropriate (+) or (-) isomer of Compound (361) and reacting in a similar manner as in Example 13 using the appropriate isocyanate shown in the table below, the following compounds were prepared:

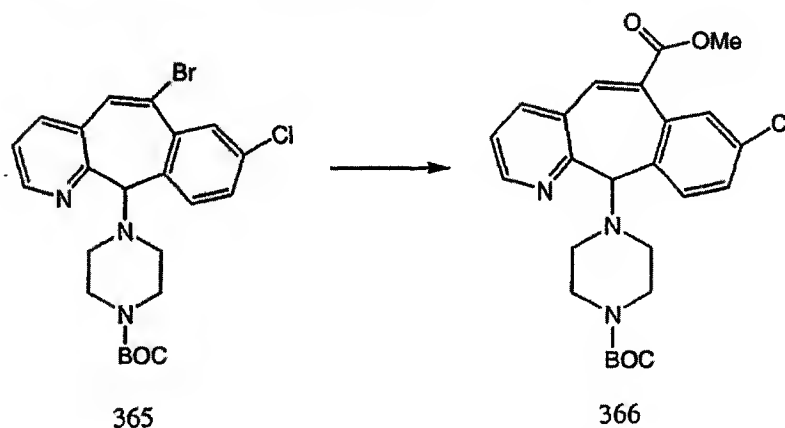

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
161	Example 13		362a isomer 1	MS MH+=548
162	Example 13		362b isomer 2	MS MH+=548
163	Example 13		363a Isomer 1	MS MH+=541
164	Example 13		363b isomer 2	MS MH+=541
165	Example 13		364a isomer 1	MS MH+=558
166	Example 13		364b isomer 2	MS MH+=558
166.1	Example 13		364c	Mp 201.5-208.3°C

224

Compound (365).

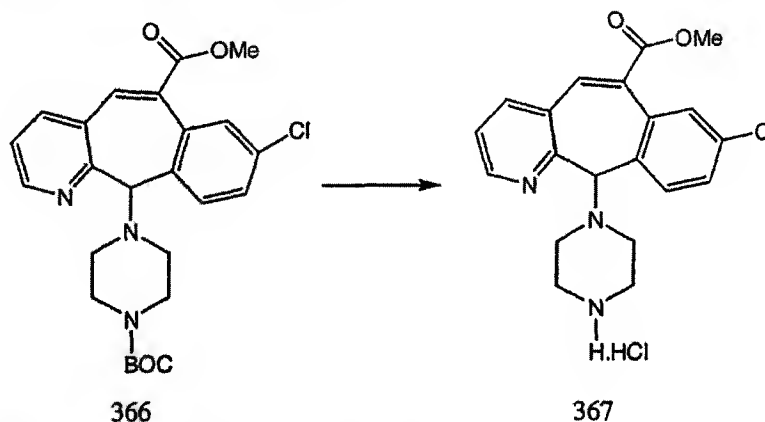

- 5 In essentially the same manner as in Preparative Example 23, Steps A-D, using the 6-Bromo substituted product from Step B, Compound (234b), the product Compound (365) was prepared (76.6 g, 100% yield).

PREPARATIVE EXAMPLE 4210 A. Preparation of Compound (366).

- 15 To a solution of Compound (365) from Preparative Example 41 (4.0g, 8.16 mmol) in toluene (75 mL) and MeOH (20 mL), was added triphenyl phosphine (1.099g, 4.08 mmol), DBU (1.7 g, 11.02 mmol) and palladium chloride (0.145 g, 0.82

mmol). The resulting solution was evacuated with CO at 100 psi and heated at 78°C-82°C for 5 hours, followed by the extraction with EtOAc-H<sub>2</sub>O. The combined organic layer was then washed with brine, dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated to dryness and purified by column chromatography, eluting with 30% EtOAc/70% Hexane to give a  
5 Compound (366) (3.12 g, 100% yield, MH<sup>+</sup>=470.1).

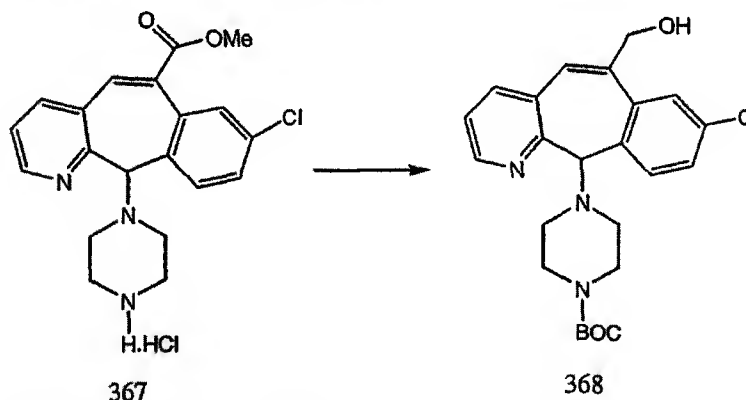

B. Preparation of Compound (367).

A solution of Compound (366) from Step A above (3.1 g, 6.6 mmol) in 4M HCl/Dioxane (120 mL) was stirred for 3 hours and then concentrated to dryness to give the crude salt of Compound (367) (3.89 g, 100% yield, MH<sup>+</sup>=370.2)

15

C. Preparation of Compound (368).

20

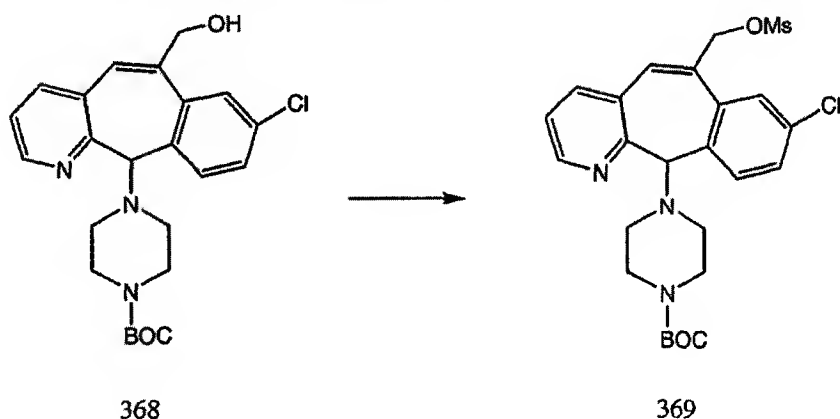

To a solution of Compound (367) from Step B above (3.43 g, 8.45 mmol) in THF (60 mL) at 0°C, was added DIBAL (7.21 g, 50.7mmol). The resulting solution was warmed to room temperature, stirred overnight and then concentrated to dryness,

followed by the addition of Boc anhydride (3.69 g, 16.9 mmol). The reaction was then extracted with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O, filtered over Na<sub>2</sub>SO<sub>4</sub> and concentrated to dryness to afford Compound (368) (3.75g, 100% yield, MH<sup>+</sup>=442.4).

5 C.1 Alternate Preparation of Compound (368).

A solution of compound 366 from step A above (23.46g, 50.98 mmol) in  $\text{CH}_2\text{Cl}_2$  - MeOH -  $\text{H}_2\text{O}$  (120mL, 600 mL, 60 mL respectively) combined with LiOH (12.0 g, 350.88 mmol) was refluxed at 40°C overnight. Solvent was removed from the reaction mixture and the residue diluted with  $\text{CH}_2\text{Cl}_2$ , was acidified to pH 6 with 1N HCl. The organic layer was separated and washed with water, dried over  $\text{Na}_2\text{SO}_4$  and concentrated. The product was dissolved in THF (285 mL) at 0°C. Triethyl amine (6 mL, 42.97 mmol) and ethyl chloroformate (4.1 mL, 42.97 mmol) were added and stirred at 0°C for 1 h. The reaction mixture was filtered and the filtrate was cooled to -70°C. To this filtrate was added  $\text{NaBH}_4$  (3.97g, 104.94 mmol) and stirred for 1 h at -70°C after which time 40 mL of MeOH was added dropwise. The solvents were removed and the residue taken up in methylene chloride, washed with sat. (aq)  $\text{NaHCO}_3$ , then brine, dried over  $\text{Na}_2\text{SO}_4$  and concentrated to give Compound (368) as a solid.

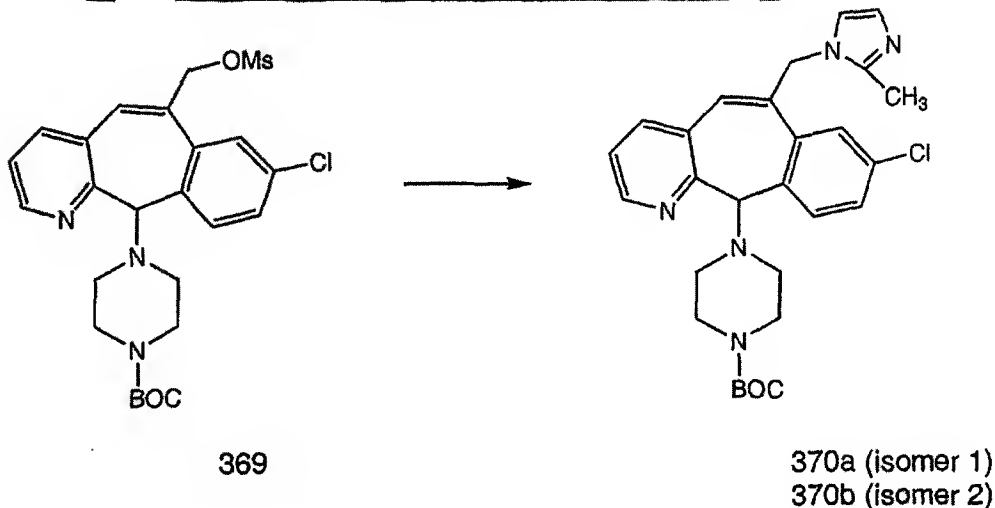

**D. Preparation of Compound (369).**

25 To a solution of Compound (368) from Step C above (3.74 g, 8.46 mmol) in  $\text{CH}_2\text{Cl}_2$  (100 mL) was added triethyl amine (3.5 mL, 25.38 mmol) and methanesulfonyl chloride (1.45g, 2.7 mmol). The resulting solution was stirred under nitrogen at room

temperature for overnight and then washed with saturated  $\text{NaHCO}_3$ , then brine, and dried over  $\text{Na}_2\text{SO}_4$  to give the mesylate compound (369) (3.86 g, 88% yield).

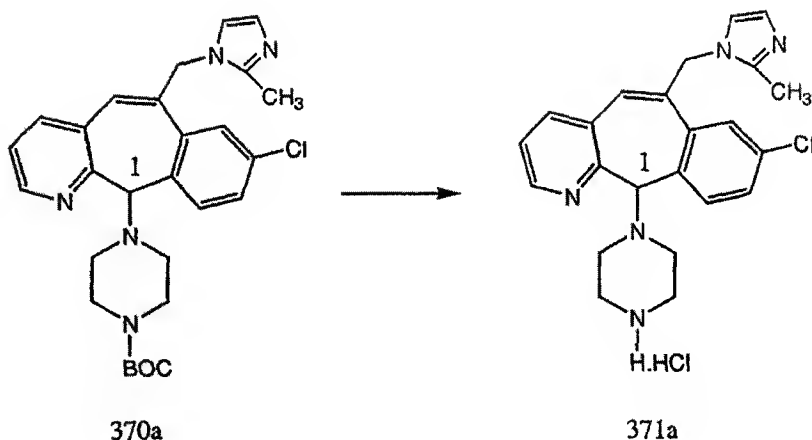

E. Preparation of Compounds (370a) AND (370b)

To a solution of 2-methylimidazole (2.43g, 29.68 mmol) in DMF (30 mL) under  $\text{N}_2$  was added NaH (0.53g, 22.3 mmol) and stirred for 10 min, followed by the addition of Compound (369) from Step D above (3.86 g, 7.42 mmol). The solution was stirred over night. The solution was then concentrated to dryness and extracted with EtOAc- $\text{NaHCO}_3$ , dried over  $\text{Na}_2\text{SO}_4$ , and concentrated. The crude product was purified by column chromatography, eluting with 2% MeOH- $\text{NH}_3$ /98%  $\text{CH}_2\text{Cl}_2$  to afford a mixture of isomers. Further separation was accomplished by Preparative HPLC Chiral AD Column chromatography, eluting with 25% IPA/75% hexane/0.2% DEA to give pure Compound (370a) (isomer 1) (0.160g) and Compound (370b) (isomer 2) (0.140 g) ( $\text{MH}^+=506.1$ )

F. Preparation of Compounds (371a) AND (371b).

228

A solution of Compound (370a) (isomer 1) from Step E above (0.105g, 0.21 mmol) in 4M HCl/Dioxane (10 mL) was stirred at room temperature for 3 hours and concentrated to dryness to afford Compound (371a) (0.147g, 100% yield)

Compound (370b) (isomer 2) from Step E was treated in the same manner as isomer 1 above, to afford Compound (371b) (isomer 2).

#### EXAMPLE 167

##### Preparation of Compound (372)

To a solution of compound 371a (1.3g, 2.94 mmol) in  $\text{CH}_2\text{Cl}_2$  (60 mL) was added triethyl amine (1.3 mL, 9.4 mmol) and p-cyano phenyl isocyanate (0.466g, 3.24 mmol). The resulting solution was stirred at room temperature overnight, followed by the extraction with  $\text{CH}_2\text{Cl}_2$  and saturated  $\text{NaHCO}_3$ . The organic layer was dried over  $\text{Na}_2\text{SO}_4$ , evaporated and the residue purified by column chromatography, eluting with 1 % -2%  $\text{MeOH-NH}_3$ /98%  $\text{CH}_2\text{Cl}_2$  to afford compound (372) (0.870 g , 48% yield) see table below.

#### EXAMPLE 168

##### Preparation of Compound (373)

Compound 371b (isomer 2) was reacted in a similar manner as in Example 13 with p-cyano phenyl isocyanate to afford compound (373) see table below.

#### EXAMPLE 169

##### Preparation of Compound (374)

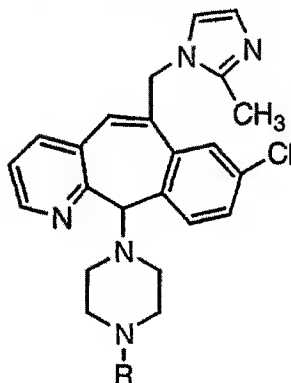

Compound 371a (isomer 1) was reacted in a similar manner as in Example 13 with p-chloro phenyl isocyanate to afford compound (374) see table below.

#### EXAMPLE 170

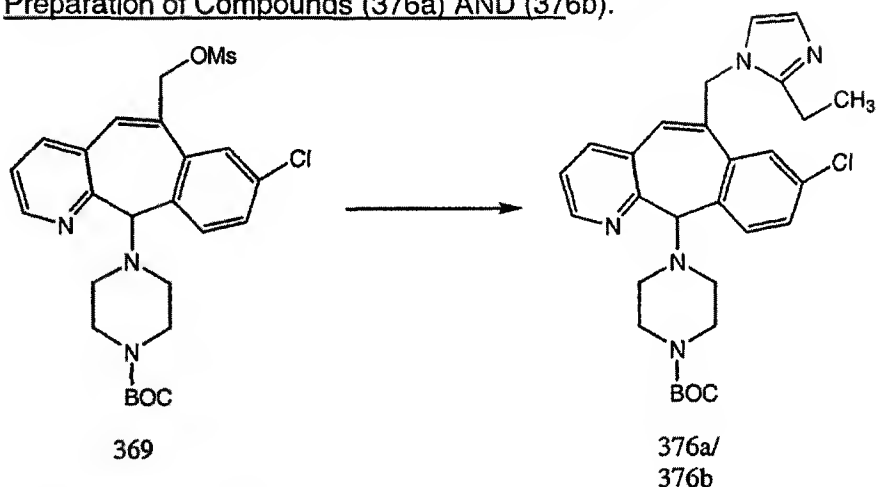

##### 5      Preparation of Compound (375)

Compound 371b (isomer 2) was reacted in a similar manner as in Example 13 with p-chloro phenyl isocyanate to afford compound (375) see table below.

230

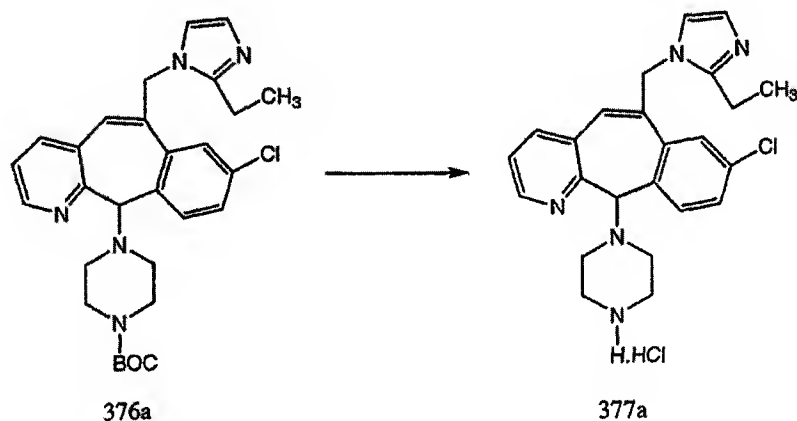

Examples 167-170

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
167	Example 13		372 isomer 1 S-isomer	MS MH+=550
168	Example 13		373 isomer 2 R-isomer	MS MH+=550
169	Example 13		374 isomer 1 S-isomer	MS MH+=559
170	Example 13		375 isomer 2 R-isomer	MS MH+=559
170.1	Example 13		375.1 isomer 1	MS MH+=525

PREPARATIVE EXAMPLE 43A. Preparation of Compounds (376a) AND (376b).

- 5 To a solution of 1-ethylimidazole (0.33g, 3.46 mmol) in DMF (5 mL) under nitrogen was added NaH (0.083g, 3.46 mmol) and stirred for 10 minutes, followed by the addition of Compound (369) from Preparative Example 42, Step D (0.6g, 1.15 mmol) and stirred for over night. The solution was then evaporated to dryness, diluted with ethyl acetate, washed with sodium bicarbonate, dried over sodium sulfate and
- 10 concentrated to dryness. The reaction mixture was purified by column chromatography on silica gel, eluted with 3% MeOH/97% CH<sub>2</sub>Cl<sub>2</sub> to give a mixture of isomers. Further separation was accomplished using prep. HPLC with a chiral AD column to afford pure Compound (376a) (isomer 1) and Compound (376b) (isomer 2) (MH<sup>+</sup>=520.1).

15 B. Preparation of compounds (377a) AND (377b).

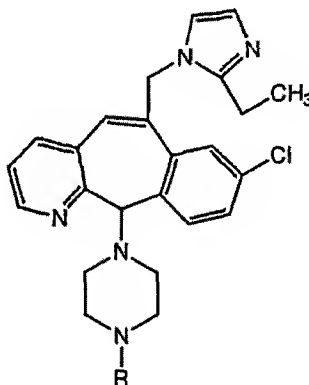

A solution of Compound (376a) from Step A (0.107g, 0.2 mmol) in 4M HCl in Dioxane (10 mL) was stirred for two hours at room temperature then concentrated to dryness to afford Compound (377a) (isomer 1) (0.13g, 100% yield,  $MH^+=420.1$ ).

- 5 Compound (376b) was reacted in a similar manner as above to afford Compound (377b) (isomer 2) ( $MH^+=420.1$ ).

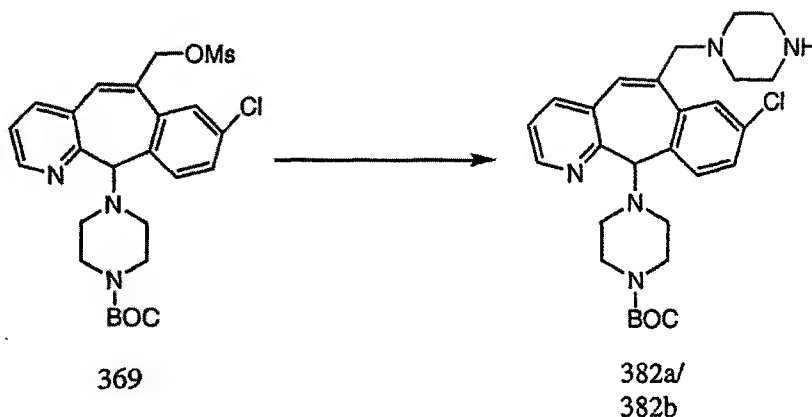

### EXAMPLES 171-174

- 10 Starting with the appropriate (+) or (-) isomer of Compound (377) and reacting in a similar manner as in Example 13 using the appropriate isocyanate as shown in the table below, the following compounds were prepared:

15

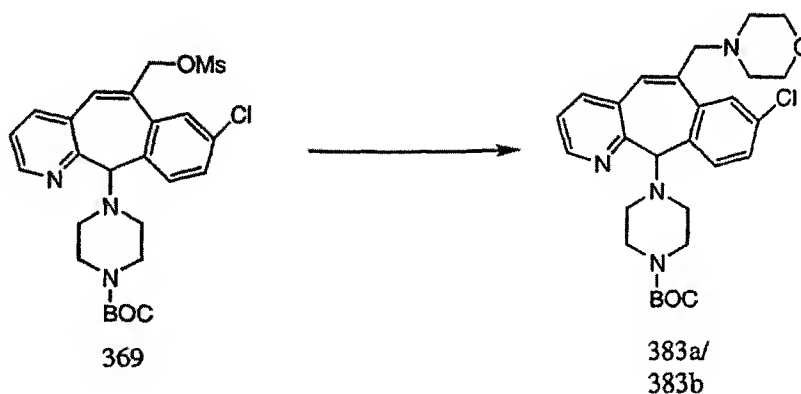

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
171	Example 13		378 isomer 1	MS $MH^+=504$
172	Example 13		379 isomer 2	MS $MH^+=504$
173	Example 13		380 isomer 1	MS $MH^+=573$
174	Example 13		381 isomer 2	MS $MH^+=573$

PREPARATIVE EXAMPLE 44Compounds (382a) AND (382b).

5

To a solution of Compound (369) from Preparative Example 42, Step D (0.5 g, 0.96 mmol) in  $\text{CH}_3\text{CN}$  (80 mL), was added piperazine (0.25 g, 2.88 mmol) and 2,6-bis(dimethyl)-1-methylpiperidine (0.597 g, 3.84 mmol). The resulting solution was stirred at room temperature for 4hrs, concentrated to dryness and extracted with  $\text{CH}_2\text{Cl}_2$ -  
 10  $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$  and purified by column chromatography on silica gel, eluting with 3%MeOH/ 97% $\text{CH}_2\text{Cl}_2$  to give the product of 2 isomers (0.28 g, 57% yield). These two isomers were separated by HPLC on chiral AD column to give pure Compound (382a) (isomer 1) (0.136 g,  $\text{MH}^+=510.3$ ) and Compound (382b) (isomer 2) (0.14 g,  $\text{MH}^+=510.3$ )

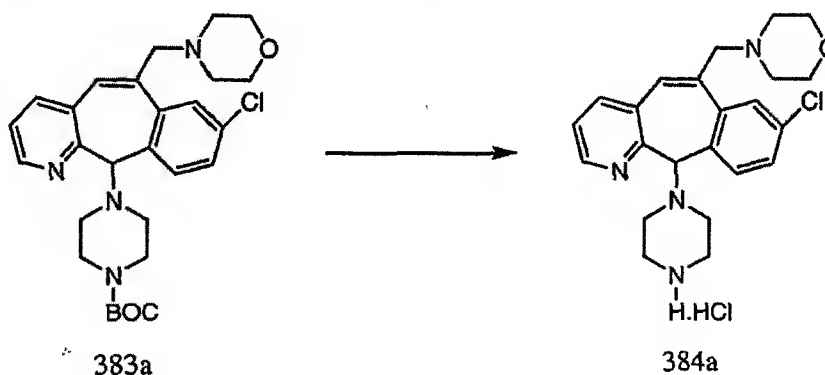

15

PREPARATIVE EXAMPLE 45A. Compounds (383a) AND (383b).

20

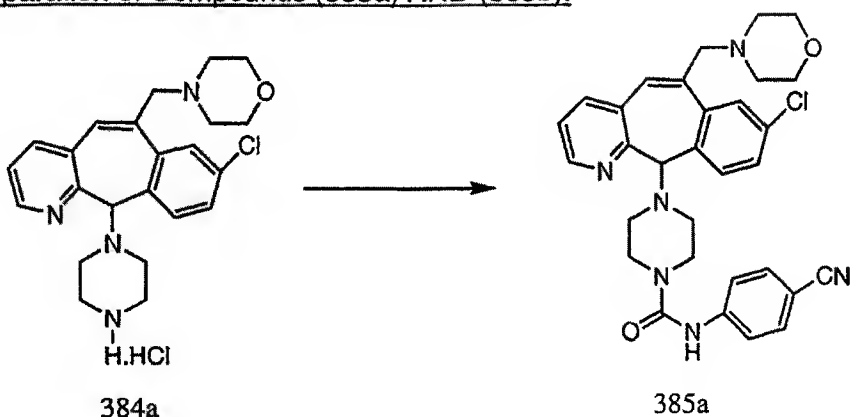

To a solution of Compound (369) from Preparative Example 42, Step D (1.2 g, 2.31 mmol) in CH<sub>3</sub>CN (100 mL), was added morpholine (0.8 g, 9.23 mmol) and 2,6-bis(dimethyl)-1-methylpiperidine (1.9 g, 12.24 mmol). The resulting solution was stirred at room temperature overnight and concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-NaHCO<sub>3</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub> and purified by column chromatography on silica gel, eluting with 1%NH<sub>3</sub>-MeOH/99%CH<sub>2</sub>Cl<sub>2</sub> to give the product of two isomers (1.1 g, 82% yield). These two isomers were separated by HPLC on chiral AD column to give pure Compound (383a) (isomer 1) (0.24 g, MH<sup>+</sup>=425.1) and Compound (383b) (isomer 2) (0.112 g, MH<sup>+</sup>=425.1).

**B. Preparation of Compound (384a)**

A solution of Compound (383a) from Step A (0.19 g, 0.37 mmol) in 4M HCl/Dioxane (25 mL) was stirred at room temperature for 2.5 hrs and concentrated to dryness to give Compound (384a) (0.194 g, MH<sup>+</sup>=411.1).

Compound (384b) was prepared in a similar manner as above starting with Compound (383b) from Step A.

**EXAMPLE 175****Preparation of Compounds (385a) AND (385b).**

5

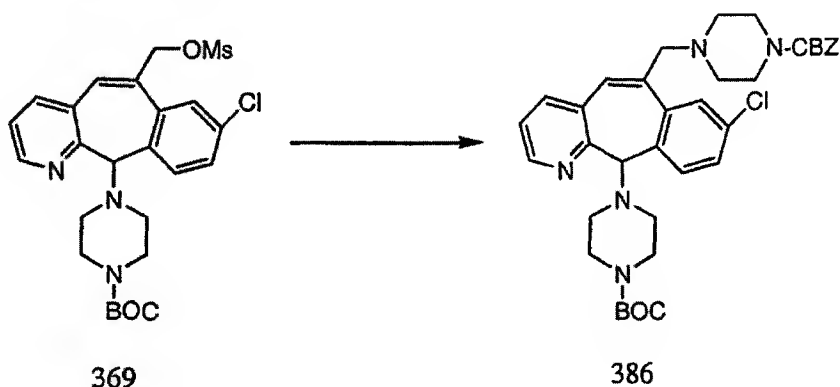

To a solution of Compound (384a) from Preparative Example 45, Step B above (0.05 g, 0.11 mmol) in anhydrous  $\text{CH}_2\text{Cl}_2$  (5 mL) was added triethyl amine (0.036 g, 0.36 mmol) and 4-cyanophenyl isocyanate (0.018 g, 0.173 mmol). The resulting solution was stirred at room temperature for 4 hrs under nitrogen and concentrated to dryness, followed by extraction with  $\text{CH}_2\text{Cl}_2$ - $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$  and concentrated to dryness to give Compound (385a) (isomer 1) (0.06 g, 100% yield,  $\text{MH}^+=555.4$ ).

15

Starting with Compound (384b) from Preparative Example 45, Step B and reacting it in the same manner as above, Compound (385b) (isomer 2) was prepared ( $\text{MH}^+=555.4$ ).

**PREPARATIVE EXAMPLE 46****A. Preparation of Compound (386)**

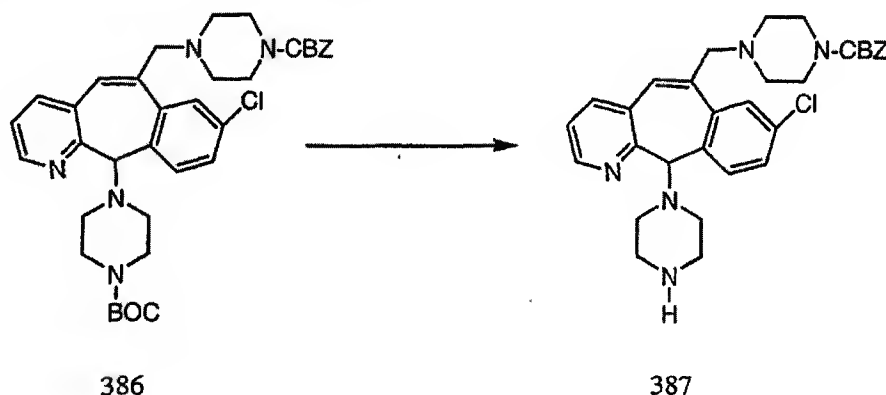

20

To a solution of Compound (369) from Preparative Example 42 Step D (3.0 g, 5.77 mmol) in CH<sub>3</sub>CN (150 mL) was added 2,6-bis(dimethyl)-1-methyl piperidine (7.16 g, 16.16 mmol) and benzyl-1-piperazinecarboxylate (7.61 g, 34.62 mmol). The resulting solution was stirred overnight, concentrated to dryness, followed by

5 extraction with CH<sub>2</sub>Cl<sub>2</sub>-NaHCO<sub>3</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated to dryness and purified by column chromatography on silica gel, eluting with 1% NH<sub>3</sub>-MeOH/99% CH<sub>2</sub>Cl<sub>2</sub> and then 30% EtOAc/ 70% hexane to give the title product Compound (386) (1.24 g, 67% yield, MH<sup>+</sup>=644.2)

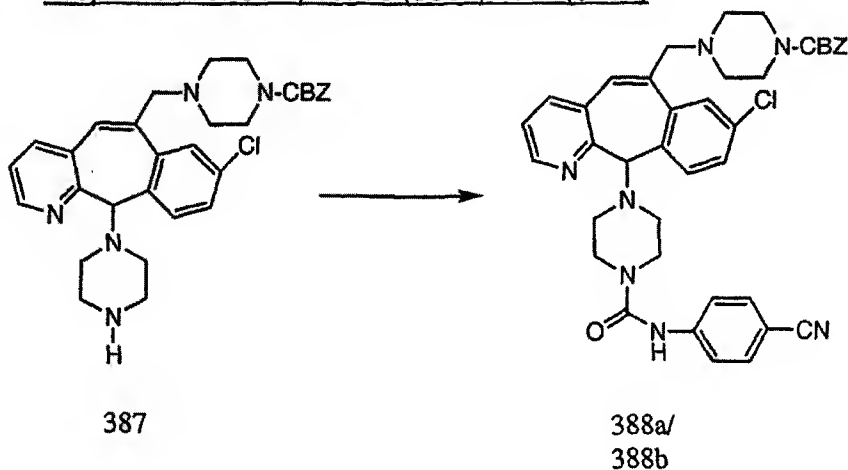

B. Preparation of Compound (387).

A solution of Compound (386) from Step A above (0.5 g, 0.77 mmol) in 4M HCl /Dioxane (50 mL) was stirred at room temperature for 2 hrs. The solution was then

15 poured onto ice and basified with 1N NaOH solution, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated to dryness to give Compound (387) (0.43 g, 100% yield, MH<sup>+</sup>=544.5).

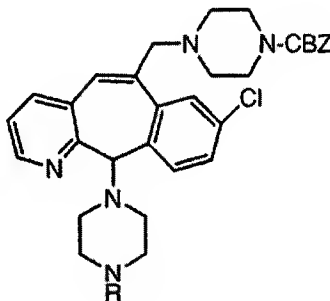

C. Preparation of Compounds (388a) AND (388b).

Compound (387) from Step B above was reacted in a similar manner to that described in Example 175 to give a mixture of 2 isomers (0.102 g, 55% yield). Further separation by HPLC, using a chiral AD column afforded pure Compound (388a) (isomer 1) (0.05 g,  $MH^+=688.2$ ) and Compound (388b) (isomer 2) (0.048 g,  $MH^+=688.2$ ).

### EXAMPLES 176 AND 177

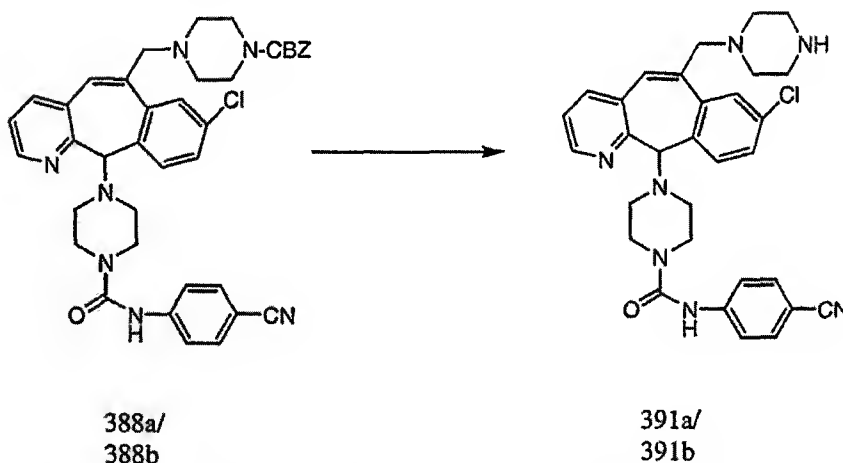

Reacting Compound (387) from Preparative Example 46, Step B in a similar manner as in Example 175 using the appropriate isocyanate as shown in the table below, the following compounds were prepared:

15

EX. #	PROCEDURE	R=	CMPD #	PHYS. DATA
176	Example 175		389 isomer 1	MS $MH^+=688$
177	Example 175		390 isomer 2	MS $MH^+=688$

**EXAMPLE 178**  
**Preparation of CompoundS (391a) AND (391b).**

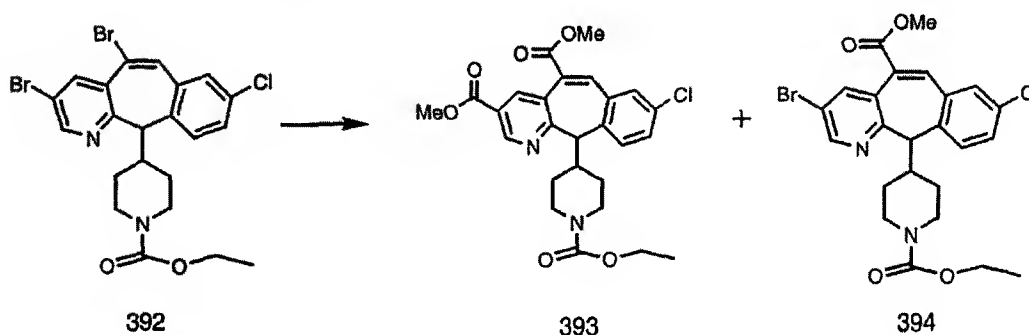

5

To a solution of Compound (388a) from Preparative Example 46, Step C (0.05 g, 0.086 mmol) in  $\text{CH}_3\text{CN}$  (1 mL) at  $0^\circ\text{C}$  was added iodotrimethylsilane (0.05 mL, 0.343 mmol). The resulting solution was stirred at  $0^\circ\text{C}$  for 1 hr and concentrated to dryness. The residue was then poured onto 1N HCl solution, followed by extraction with ether. The aqueous layer was then basified with 10%  $\text{NH}_4\text{OH}$  solution and then extracted with  $\text{CH}_2\text{Cl}_2$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$  and concentrated to dryness affording Compound (391a) (isomer 1) (0.02 g, 42.5% yield,  $\text{MH}^+ = 554.1$ ).

Starting with Compound (388b) from Preparative Example 46, Step C, and reacting in the same manner as above, Compound (391b) (isomer 2) was prepared ( $\text{MH}^+ = 554.1$ ).

**PREPARATIVE EXAMPLE 47**  
**A. COMPOUND (394).**

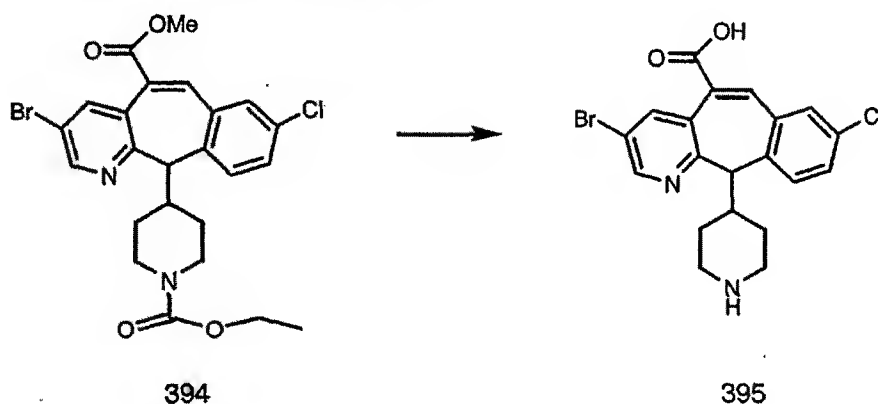

20

To a solution of Compound (392) prepared according to the procedure in, The Journal of Medicinal Chemistry (1998), 41(10), 1563 (5.0 g, 9.24 mmol) in MeOH (20 mL) and toluene (50 mL), at room temperature, was added triphenylphosphine (1.21 g, 4.62 mmol), DBU (1.90 g, 12.48 mmol) and palladium chloride (0.16 g, 0.92 mmol).

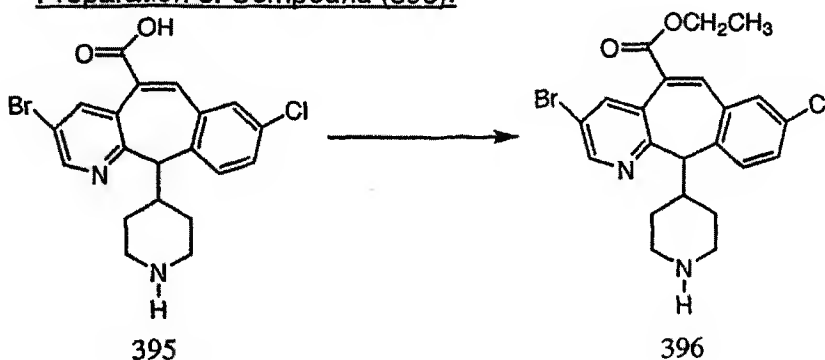

5 The resulting solution was stirred at 80°C for 6 hrs, then stirred at room temperature overnight. The solution was then concentrated to dryness to give two products. The desired product was purified by column chromatography on normal phase silica gel, eluting with 30% EtOAc/70%hexane to give a white solid compound (394) (2.24 g, 47% yield,  $MH^+=521.1$ )

10 B. Preparation of Compound (395).

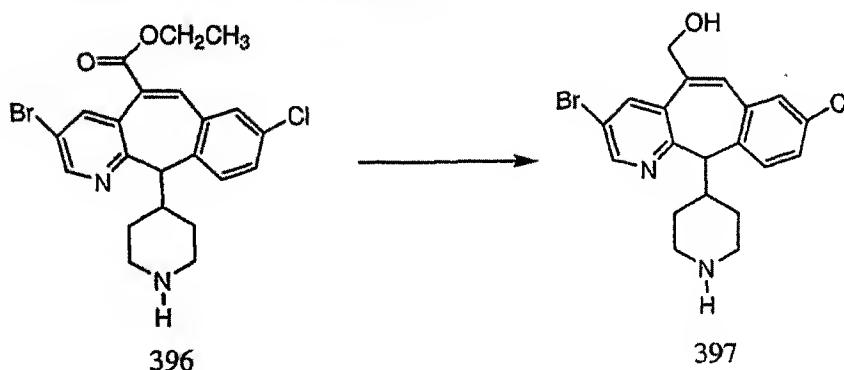

15 A solution of Compound (394) from Step A above (2.38 g, 4.58 mmol) in concentrated HCL (40 mL) was heated to reflux over night. The solution was then cooled down at room temperature and basified with  $NH_4OH$  solution, followed by extraction with  $CH_2Cl_2$ . The combined organic layer was dried over  $MgSO_4$ , filtered and concentrated to dryness to give a white solid Compound (395) (1.03 g, 52% yield,  $MH^+=435.1$ ).

20 C. Preparation of Compound (396).

To a solution of Compound (395) from Step B (1.03 g, 2.37 mmol) in EtOH (50 mL, 200 proof) at room temperature, was bubbled in anhydrous  $\text{CH}_2\text{Cl}_2$  gas for 5 minutes. The solution was then heated at  $60^\circ\text{C}$  for 30 minutes, cooled down to room temperature and concentrated to dryness to afford Compound (396) (1.1 g, 100% yield,  $\text{MH}^+=463.1$ )

D. Preparation of Compound (397).

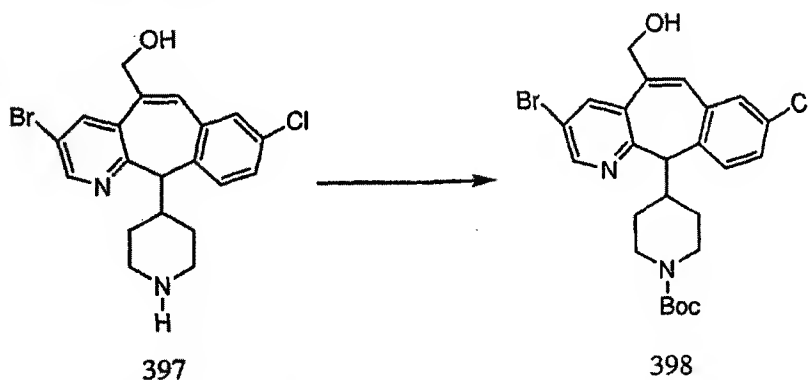

10

To a solution of Compound (396) from Step C (1.09 g, 2.19 mmol) in THF (10 mL) at  $0^\circ\text{C}$  was added dropwise DIBAL/toluene (11.0 mL, 10.95 mmol). The resulting solution was stirred overnight at room temperature, then quenched with  $\text{H}_2\text{O}$  and concentrated to dryness to give a light brown solid Compound (397) (1.2 g, 100% yield,  $\text{MH}^+=421.1$ ).

15

E. Preparation of Compound (398).

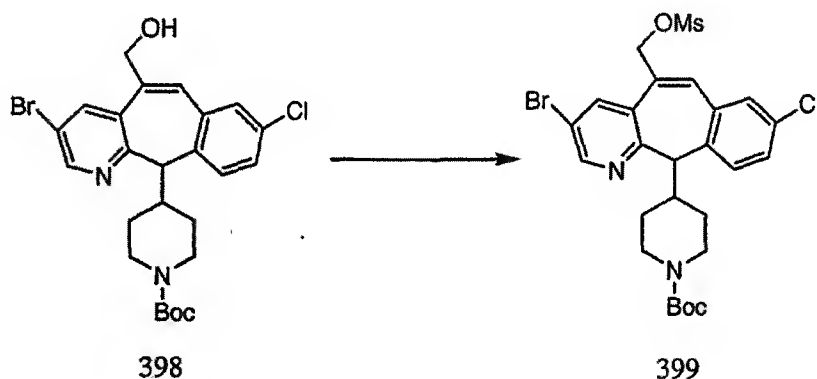

20

To a solution of Compound (397) from Step D (0.92 g, 2.19 mmol) in 50% MeOH/1%  $\text{H}_2\text{O}$  (50 mL) at room temperature, was added Boc anhydride (0.95 g, 4.38

mmol). The resulting solution was adjusted to pH=9 and stirred at room temperature for 4 hrs and concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to dryness to give a light brown solid Compound (398) (0.91 g, 80% yield, MH<sup>+</sup>=521.1).

5

**E** Preparation of Compound (399).

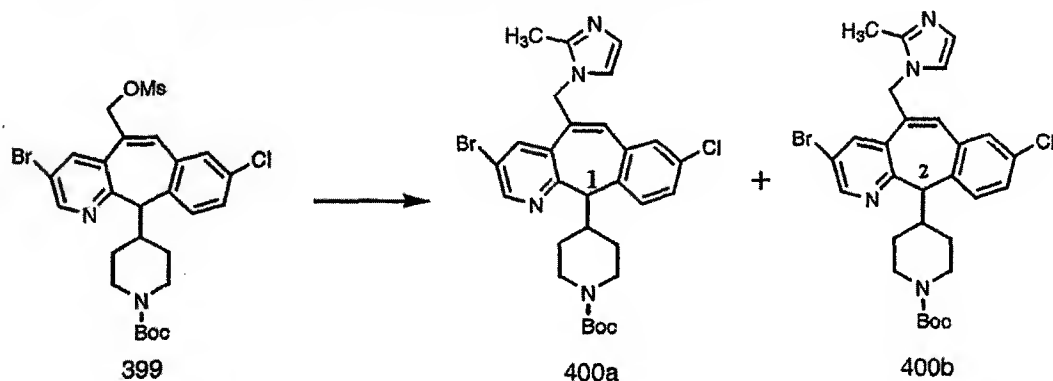

10

To a solution of Compound (398) from Step E (0.91 g, 1.75 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (10 mL) was added triethyl amine (0.73 mL, 5.25 mmol) and methanesulfonyl chloride (0.3 g, 2.62 mmol). The resulting solution was stirred at room temperature overnight and then washed with NaHCO<sub>3</sub> solution, dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give the mesylate as a light yellow solid Compound (399) (0.94 g, 90% yield).

15

**G.** Preparation of Compounds (400a) and (400b).

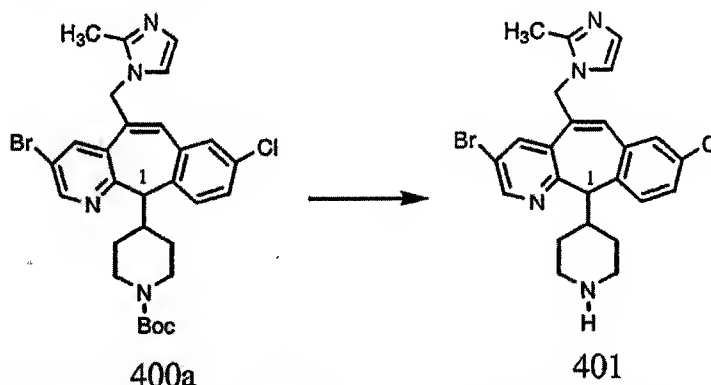

20

To a solution of Compound (399) from Step F (0.93 g, 1.60 mmol) in DMF (10 mL) under nitrogen, was added 2-methylimidazole (0.19 g, 2.3 mmol) and NaH

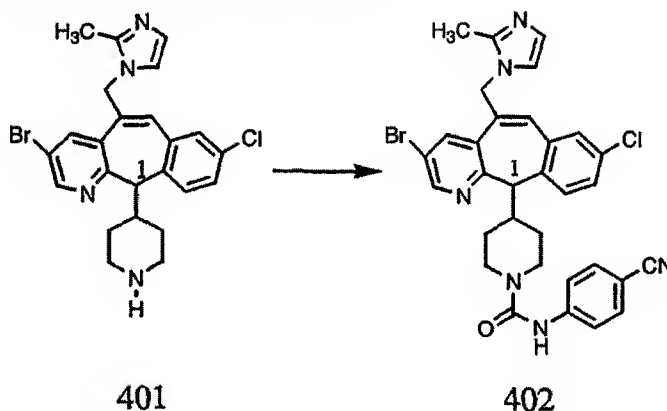

(0.037g). The resulting solution was stirred at room temperature for 15 minutes, then at 90°C for 3hrs. The solution was then cooled down to room temperature and concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-NaHCO<sub>3</sub>. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated and purified by column chromatography on normal phase silica gel, eluting with 5%MeOH-NH<sub>3</sub>/95%CH<sub>2</sub>Cl<sub>2</sub> to give mixture of two isomers as a light red solid (0.39 g, 42% yield, MH<sup>+</sup>=585.1). The 2 isomers were separated by prep HPLC, using a chiral AD column, eluting with 15%IPA/85%hexane/0.2%DEA to give Compound (400a) (isomer 1) as a light brown solid (0.10 g, 11% yield) and Compound (400b) (isomer 2) as a white solid (0.10g, 11% yield)

#### H. Preparation of Compound (401).

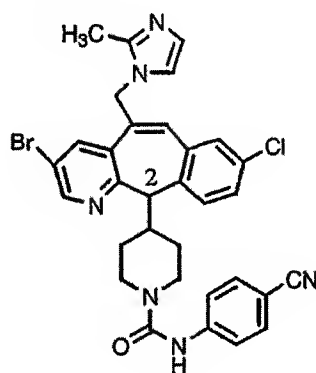

A solution of Compound (400a) (isomer 1) from Step G above (0.07 g, 0.12 mmol) in 4M HCl/Dioxane (3 mL) was stirred at room temperature for 3 hrs then concentrated to dryness to give a white solid Compound (401) (0.06 g, 100% yield)

#### I. Preparation of Compound (402).

To a solution of Compound (401) from Step H above (0.057 g, 0.12 mmol) in  $\text{CH}_2\text{Cl}_2$  (5 mL) under nitrogen, was added triethyl amine (0.026 g, 0.20 mmol) and 4-cyanophenyl isocyanate (0.019 g, 0.13 mmol). The resulting solution was stirred at room temperature overnight and then extracted with  $\text{CH}_2\text{Cl}_2$ - $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , filtered, concentrated to dryness to afford Compound (402) (isomer 1) as a white solid (0.053 g, 70% yield,  $\text{MH}^+=629.3$ )

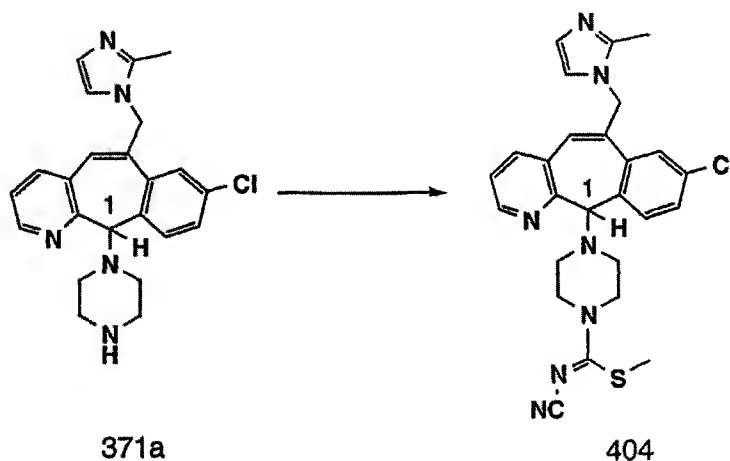

403

Compound (400b) was reacted in a similar manner as in Steps H and I above to afford Compound (403) (isomer 2) (0.059 g, 79% yield,  $\text{MH}^+=629.3$ )

10

#### PREPARATIVE EXAMPLE 48

##### Compound (404)

371a

404

15

Compound (371a) (isomer 1) from Preparative Example 42, Step F (70 mg, 0.17 mmol) was dissolved in 1 mL of ethanol and 50  $\mu\text{L}$  of triethylamine. Dimethyl-N-cyanimidothiocarbonate (45 mg, 0.29 mmol) was added and the reaction mixture and

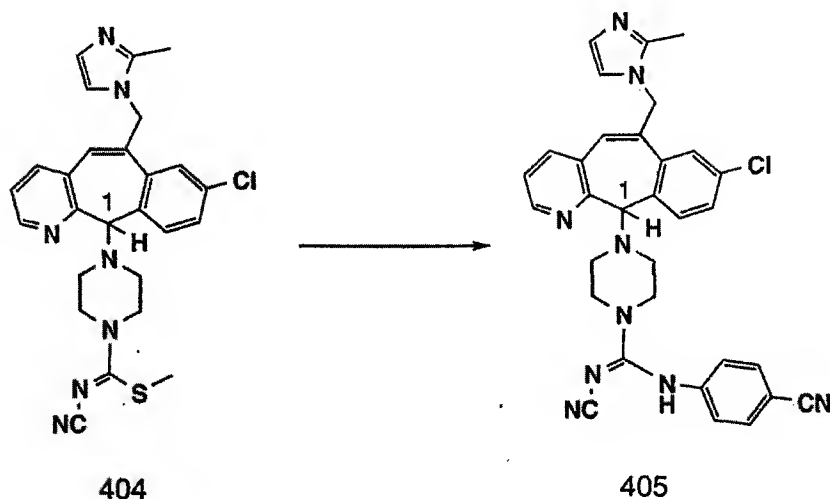

stirred at 85 °C for 24 hours. The ethanol was evaporated under reduced pressure and the product chromatographed on silica gel using 5% methanolic-ammonia dichloromethane to obtain 47 mg of title product Compound (404) (FABMS  $M+1=504$ ).

5

### EXAMPLE 179

#### Preparation of Compound (405).

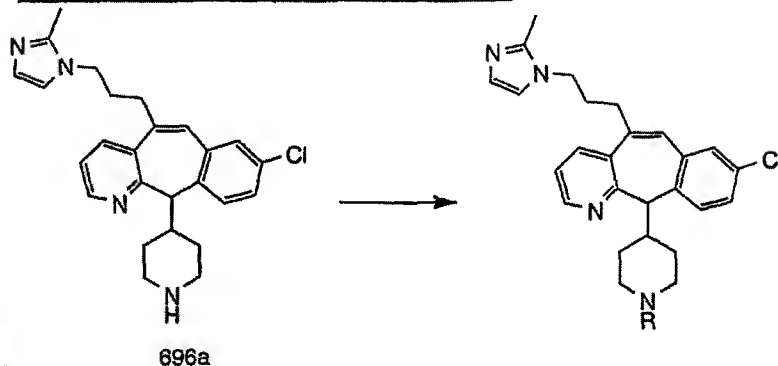

10

To a solution of para-cyanoaniline (53 mg, 0.45 mmol) in 1 ml N,N-dimethylformamide was added sodium hydride (18 mg, 0.45 mmol). After stirring under a dry nitrogen atmosphere for 1/2 hour, Compound (404) (isomer 1) from Preparative Example 48 above (40 mg, 0.08 mmol) was added and the reaction mixture stirred at 55 °C for 4 hours. The reaction mixture was cooled to ambient temperature and added to brine. The crude product was extracted with dichloromethane 3 times. The extracts were concentrated and the crude product chromatographed on silica gel using 5% methanolic-ammonia/dichloromethane to obtain 17.6 mg of title product. (405) FABMS  $M+1=574.1$

15

20

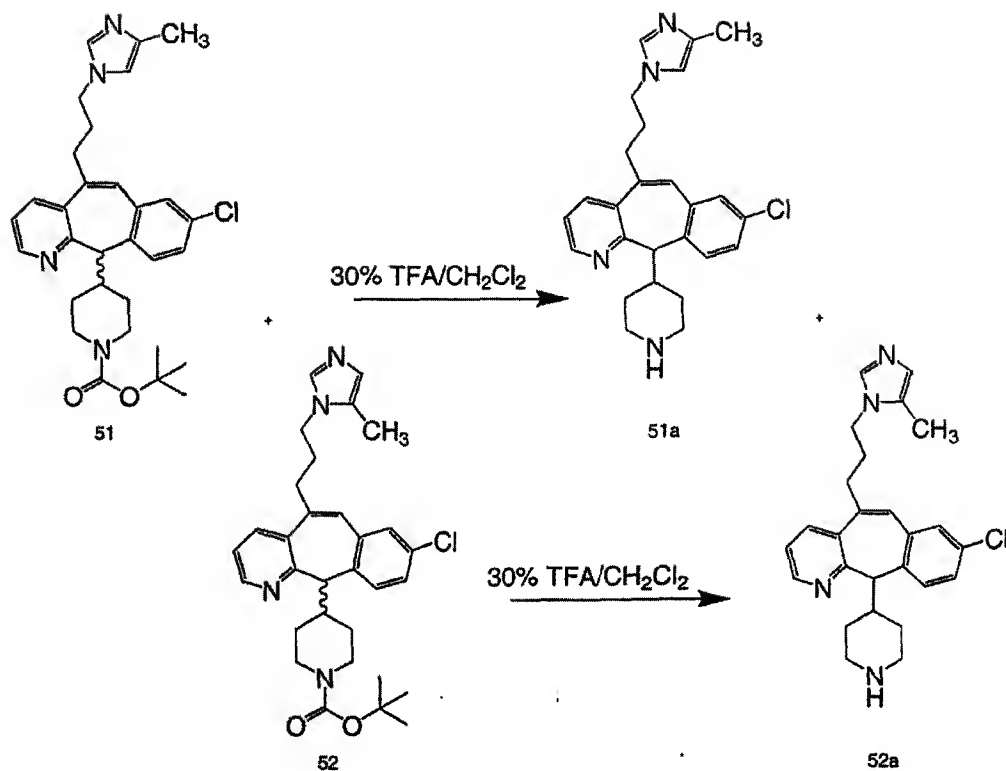

EXAMPLES 180 AND 181Preparation of Compounds (407) AND

- 5                      Compound (696a) from Preparative Example 59, Step B, was reacted in the same manner as in Preparative Example 48 and Example 179 substituting the appropriate R reagent to afford the following compounds:

EX. #	R=	CMPD #	PHYS. DATA
180		407	FABMS MH+=601.1
181		408	FABMS MH+=531.1

PREPARATIVE EXAMPLE 49COMPOUNDS (51a) AND (52a)

246

Compounds (51) and (52) from Example 11, Step A, were reacted with TFA in CH<sub>2</sub>Cl<sub>2</sub> to afford compounds (51a) and (52a).

5

### Library Preparation

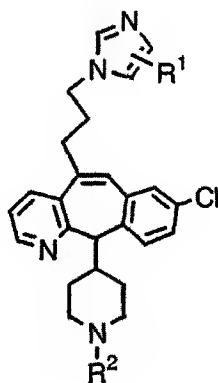

Figure 1

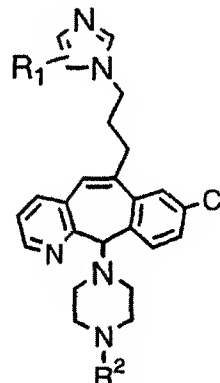

Figure 2

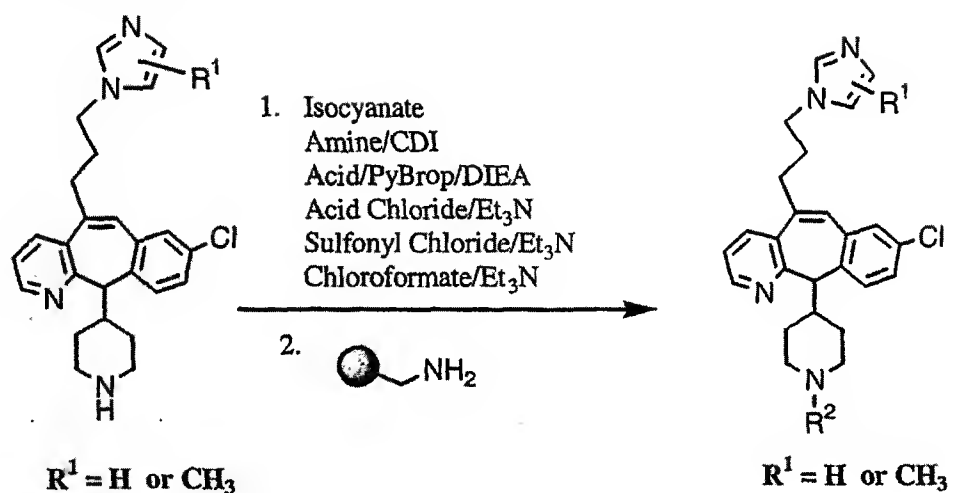

10

A library of compounds was prepared by solution phase parallel synthesis. A generic structure of these compounds is shown in Figure 1 above. The R<sup>1</sup> group on the imidazole ring can be H or CH<sub>3</sub>, the R<sup>2</sup> on N-1 of the piperidine is varied in the library.

5

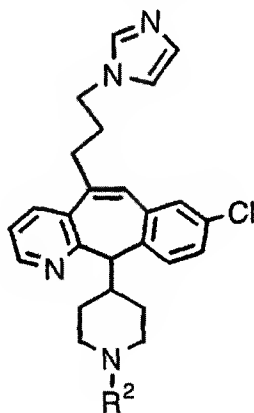

Library compounds were prepared using compound (29) from Preparative Example 4 or Compounds (51a) or (52a) from Preparative Example 49 above as templates as shown in Scheme A. Synthesis is initiated in test tubes by reacting compound (29), (51a) or (52a) with multiple equivalents of a variety of isocyanates, amines, acids, acid chlorides, sulfonyl chlorides and chloroformates in dichloromethane or chloroform. When urea is the desired product, the reaction can be carried out using isocyanates directly, or alternatively, treating an amine with CDI for several hours, then subject the templates to this solution overnight. When acids are used, the reaction is carried out in the presence of a coupling reagent such as PyBrop and a base such as DIEA overnight. When acid chlorides, sulfonyl chlorides or chloroformates are used, the reaction is typically conducted in the presence of triethylamine. After reaction, an excess amount of polystyrene aminomethyl resin is added to the reaction test tubes, and the reaction allowed to stand overnight. At which time each test tube is filtered through a Bio-Rad Poly-Prep chromatography column into another test tube, and the resin is washed with dichloromethane and MeOH. The combined filtrate solution is concentrated by rotovap evaporation. The residue in each test tube is then dissolved in H<sub>2</sub>O/CH<sub>3</sub>CN (50/50, containing 1% TFA) and purified by Gilson 215 liquid Handling-HPLC system to give pure product. The product was identified by mass spectroscopy. Library compounds prepared in this fashion are shown in Table 1 and Table 2.

PREPARATIVE EXAMPLE 50A. Compound (605), (606) AND (607)/(608).

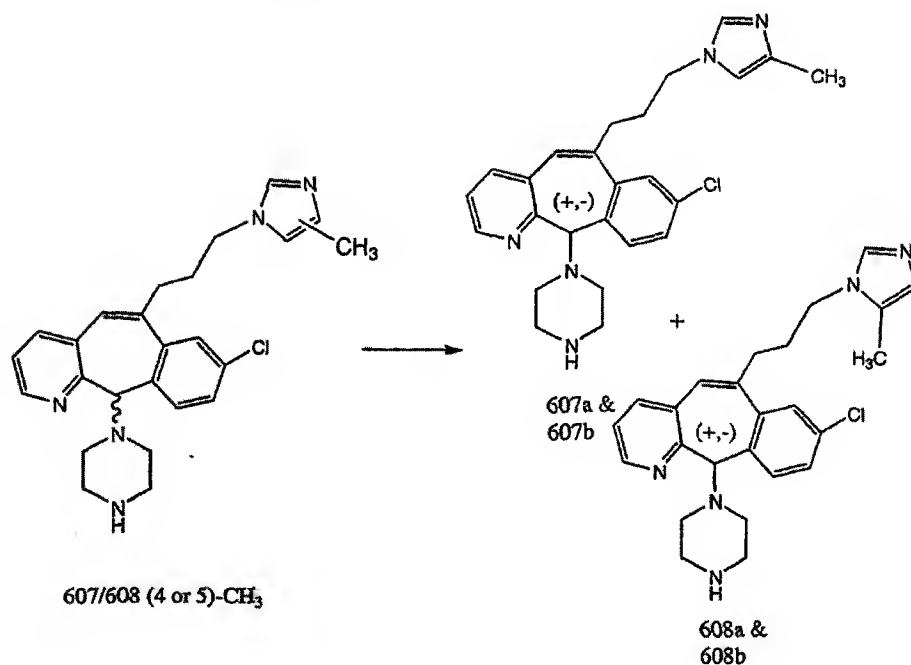

10

Compound (365) from Preparative Example 41 was reacted in essentially the same manner as in Preparative Example 4, substituting the appropriate

imidazole to obtain Compound (605) wherein  $R^1=H$  or Compounds (606) and (607)/(608) wherein  $R^1=(2 \text{ or } 4/5)CH_3$ .

**B. Preparation of Compounds (607a)/(607b) and (608a)/(608b).**

5

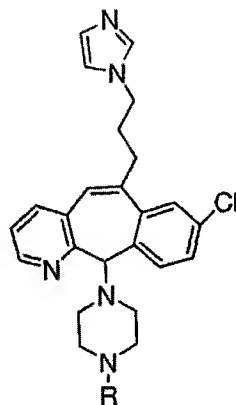

Compounds (607) and (608) from Step A above were treated in the same manner as described in Example 11 to afford pure (+,-) 4-methyl imidazole, and pure (+,-) 5-methyl imidazole enantiomers; Compound (607a), (607b) and Compound (608a), (608b) respectively.

10

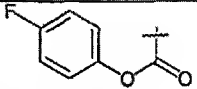

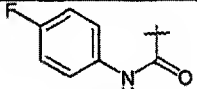

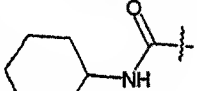

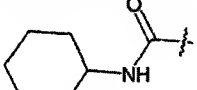

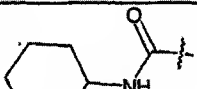

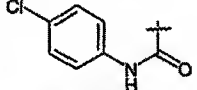

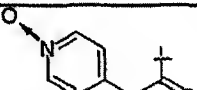

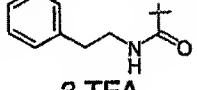

A library of compounds was prepared by the method described above starting with Compound (605), Compound (606), Compounds (607)/(608), (607a), (607b) or Compounds (608a) or (608b) used as the templates in Scheme 2. A generic structure of these compounds is shown in Figure 2 above. The  $R^1$  group on the imidazole ring can be H or CH<sub>3</sub>, the  $R^2$  on N-1 of the piperazine is varied in the library. Library compounds prepared in this fashion are shown in Table 3, Table 4 and Table 5.

15

**PREPARATIVE EXAMPLE 51****5 Preparation of Compound (636)**

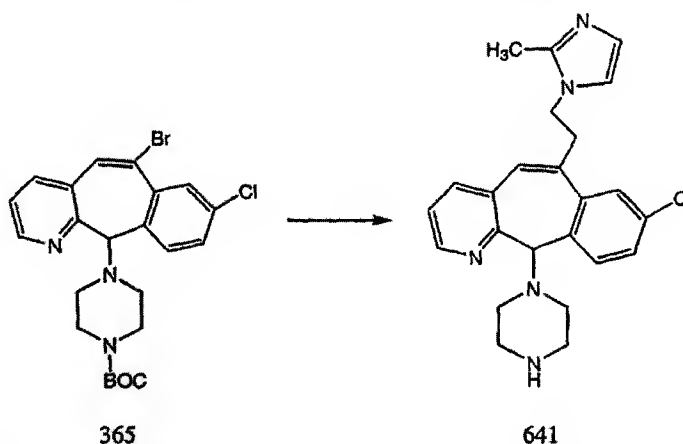

10 Compound (365) from Preparative Example 41, was reacted in essentially the same manner as Preparative Example 35 substituting Imidazole for 1-Methyl Imidazole in Step B to afford Compound (636) (MH+=406). Compound (636) was then reacted in the library fashion as described above following the procedure of Scheme 2 to afford the compounds in Table 6 below:

15

**Table 6**

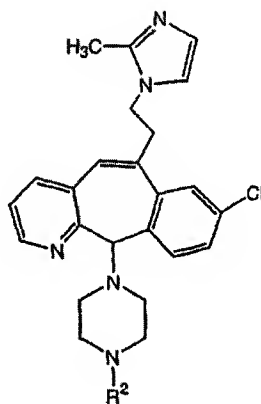

EXAMPLE #	R <sup>2</sup>	COMPOUND #	PHYSICAL DATA

**EXAMPLE 415**

5

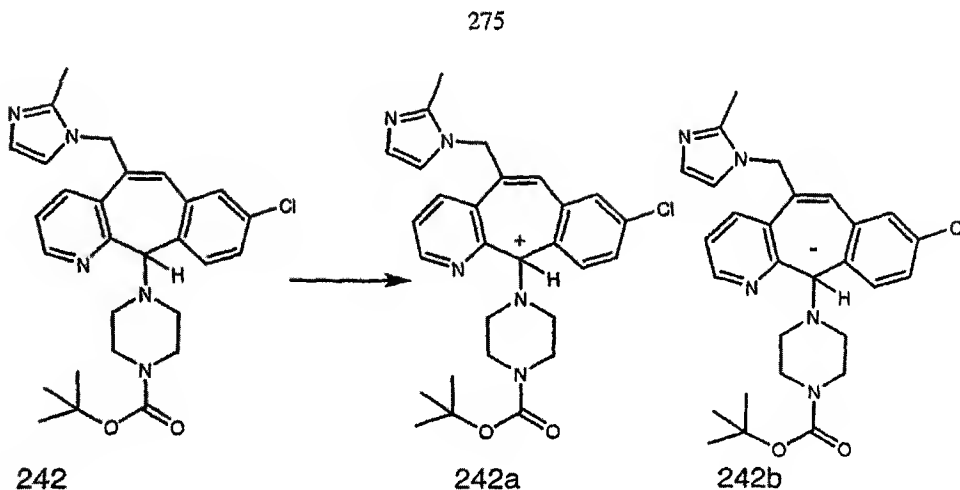

In the essentially the same manner as in Preparative Example 52 above, substituting 4-methylimidazole, the intermediate amine template was prepared

- 10 Compound (646). This was then reacted in essentially the same manner as in Examples 411-414 above to afford the product Compound (647) as a mixture of 4 and 5-Methylimidazole isomers (Mass spec. MH<sup>+</sup>=564).

15

**PREPARATIVE EXAMPLE 53**

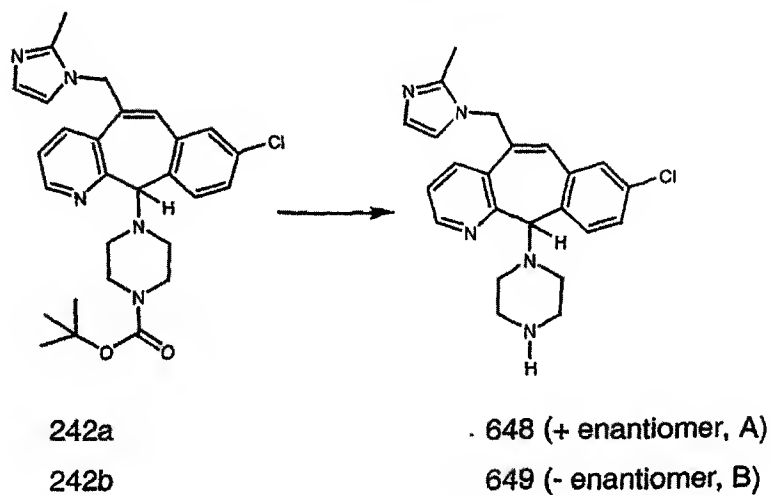

The racemic Compound (242) from Example 91 was separated by  
 5 preparative chiral chromatography (Chiralpack AD, 5 cm X 50 cm column, flow rate  
 100 mL/min., 20% 2-propanol/hexane + 0.2% diethylamine) to afford the two  
 enantiomers (242a) and (242b).

Compound (242a),  $[\alpha]_D^{25} = +144.8^\circ$  (3.16 mg/ 2 mL MeOH)

Compound (242b),  $[\alpha]_D^{25} = -144.8^\circ$  (2.93 mg/ 2 mL MeOH)

#### PREPARATIVE EXAMPLE 54

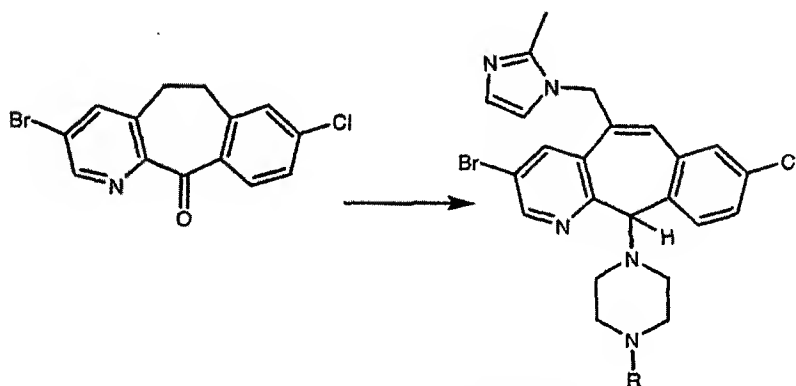

Compounds (242a) and (242b) from Preparative Example 53 above were reacted separately in essentially the same manner as Preparative Example 19, Step D to obtain the hydrochloride salt of compounds Compound (648) and Compound (649).

5 (648) (+ enantiomer, isomer A),  $MH^+ = 406.1793$

(649) (- enantiomer, isomer B),  $MH^+ = 406.1789$

10

(650) (+ enantiomer, A)

(651) (- enantiomer, B)

20

R = H

(652) (+ enantiomer, A)

(653) (- enantiomer, B)

25 3-bromo-8-chloroazaketone (U.S. patent 5,977,128, Preparative Example 11, step A, (1999)) was reacted in essentially the same manner as in Preparative Example 23, and Example 91 to obtain the N-BOC derivatives (650) and (651). Compounds (650) and (651) were then reacted separately in essentially the same manner as in Preparative Example 19, Step D to obtain the enantiomers (652) (+ enantiomer, isomer A) and (653) (- enantiomer, isomer B).

30

Compound (650), BOC derivative,  $[\alpha]_D^{25} = +69.6^\circ$  (2.5 mg/ 2 mL MeOH)

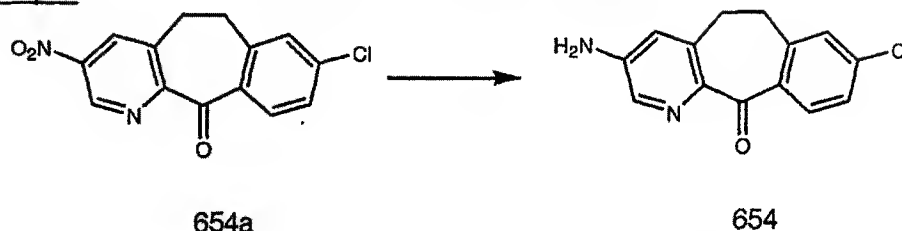

Compound (651), BOC derivative,  $[\alpha]_D^{25} = -90.0^\circ$  (3.3 mg/ 2 mL MeOH)

Compound (652) (+ enantiomer, isomer A),  $MH^+ = 485$

Compound (653) (- enantiomer, isomer B),  $MH^+ = 485$

PREPARATIVE EXAMPLE 56

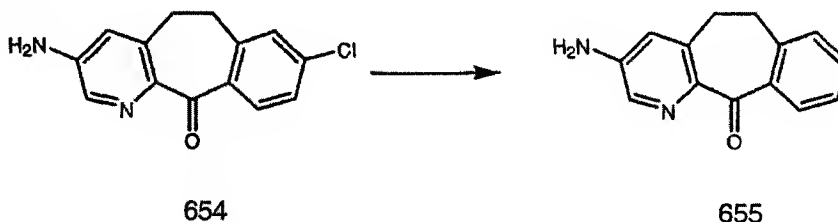

Step A

5

Compound (654a) (202 g; 0.7 mole) (J. Org. Chem. **1998**, 63, 445) was dissolved in ethanol (5 L). To this mixture was added 12 N HCl (80 ml) and iron powder (180 g) and the reaction was refluxed over night. Additional HCl and iron was added to complete the reaction. The reaction mixture was filtered and the precipitate  
10 washed with hot methanol (1L). The filtrate was concentrated under vacuum to approximately 600 ml then partitioned between 4 L  $CH_2Cl_2$  and 1.3 L of 1.3 N NaOH. The organic layer was dried over  $MgSO_4$  and filtered hot. The filtrate was concentrated under vacuum to give the aminoketone Compound (654) (184 g).

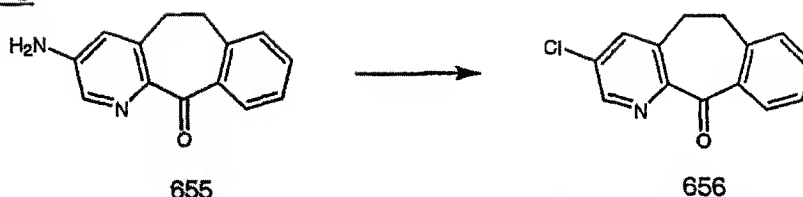

Step B

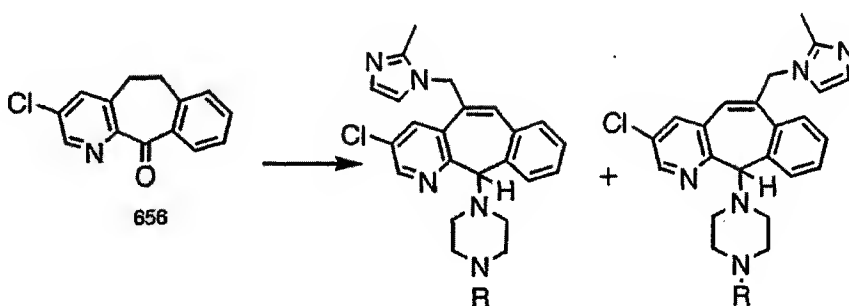

15

Compound (654) from Step A above (15 g; 57.98 mmol), was dissolved in 750 mL of ethanol containing 3.75 g of 5% Pd/C (50% in water) and 37.69 g (579.82 mmol) of ammonium formate. The mixture was brought to reflux for 2.5 hr  
20 then stirred at room temperature overnight. The reaction was filtered concentrated under vacuum and chromatographed on silica gel using 95:5 methylene chloride (saturated with ammonia) and methanol to give 6.15 g of the pure product Compound (655) as a yellow solid.

278

Step C

To a slurry of Compound (655) (4.79 g; 21.37 mmol) from Step A above, in 75 mL of acetonitrile cooled to 0°C and under nitrogen, was added t-butyl nitrite (10.31 g; 32.05 mmol) and CuCl<sub>2</sub> (3.45 g; 24.64 mmol). The mixture was warmed to room temp stirred over night and then concentrated under vacuum. The residue was slurried in 30 mL of 1 N HCl, then neutralized with aqueous NH<sub>4</sub>OH and extracted with 3 X 100 mL of ethyl acetate. The organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, concentrated under vacuum, and chromatographed on silica gel using hexane:ethyl acetate (70:30) to obtain the pure product Compound (656).

Step D

R = BOC	R = BOC
(657) (+ enantiomer, A)	(657.1) (+ enantiomer, A)
(658) (- enantiomer, B)	(658.1) (- enantiomer, B)
 R = H	 R = H
(659) (+ enantiomer, A)	(659.1) (+ enantiomer, A)
(660) (- enantiomer, B)	(660.1) (- enantiomer, B)

Compound (656) from Step B above was reacted in essentially the same manner as in Preparative Example 23, and then Example 91 to obtain the N-BOC derivatives (657), (658), (657.1) and (658.1). Compounds (657), (658), (657.1) and (658.1) were then reacted separately in essentially the same manner as in Preparative Example 19, Step D to obtain the enantiomers (659) (+ enantiomer, isomer A), (659.1)

(+ enantiomer, isomer A), (660) (- enantiomer, isomer B) and (660.1) (- enantiomer, isomer B).

Compound (657), BOC derivative,  $[\alpha]_D^{25} = +59.9^\circ$  (3.3 mg/ 2 mL MeOH)

5 Compound (658), BOC derivative,  $[\alpha]_D^{25} = -57.1^\circ$  (3.3 mg/ 2 mL MeOH)

Compound (659), (+ enantiomer, isomer A),  $MH^+ = 406$

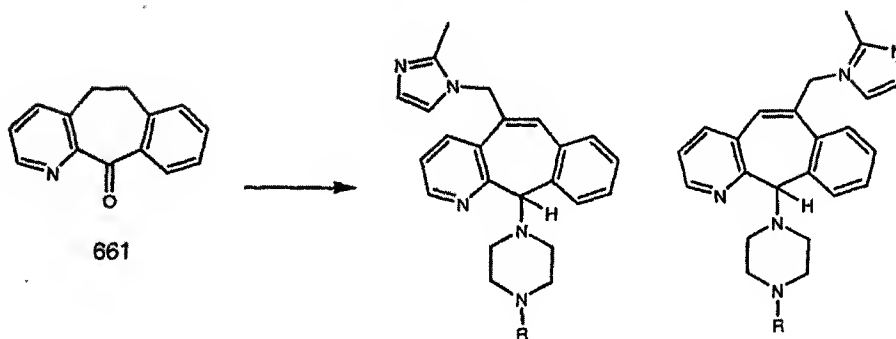

Compound (660), (- enantiomer, isomer B),  $MH^+ = 406$

Compound (659.1), (+ enantiomer, isomer A),  $MH^+ = 406$

10 Compound (660.1), (- enantiomer, isomer B),  $MH^+ = 406$

#### EXAMPLES 416-419

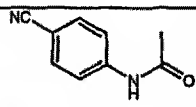

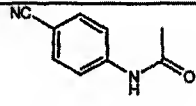

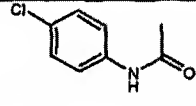

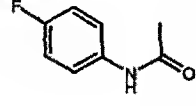

20

25

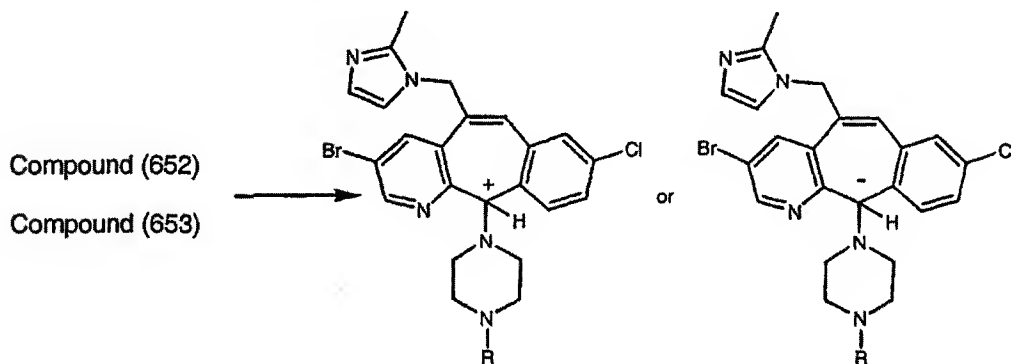

The appropriate (+) enantiomer (648) or (-) enantiomer (649) from Preparative Example 54 above, was taken up in  $CH_2Cl_2$  treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in Table 8 below:

TABLE 8

Example #	R	Enantiomer	Comp #	Phys. Data.
416		+	678	Mp = 162.2-165.6°C [α] <sub>D</sub> <sup>25</sup> = +98.2° (3 mg/ 2 mL MeOH)
417		-	679	Mp = 158.1-164.5°C [α] <sub>D</sub> <sup>25</sup> = -81.2° (2.6 mg/ 2 mL MeOH)
418		+	680	Mp = 161.5-164.8°C MH <sup>+</sup> = 559.1787
419		+	681	Mp = 157.7-161.7°C MH <sup>+</sup> = 543.2069

EXAMPLES 420 AND 421

5

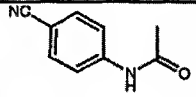

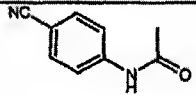

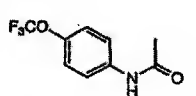

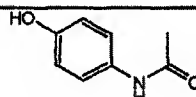

10

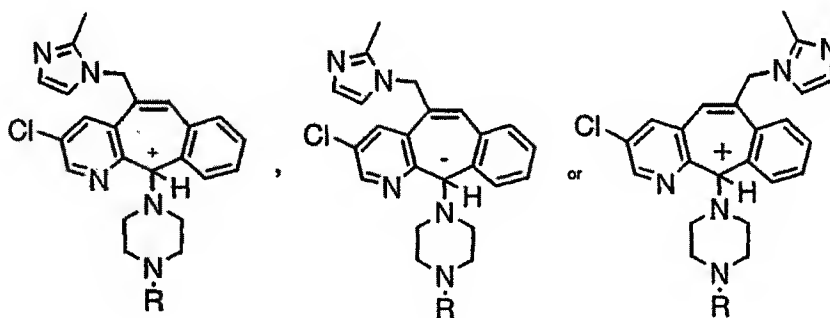

The appropriate (+) enantiomer (652) or (-) enantiomer (653) from Preparative Example 55 above, was taken up in CH<sub>2</sub>Cl<sub>2</sub> treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in Table 9 below:

15

Table 9

Example #	R	Enantiomer	Comp #	Phys. Data.
420		+	682	Mp = 168.8-172.3°C
421		-	683	Mp = 172.5-177.7°C
421.1		+	683.1	Mp = 157.1-160.5°C (dec)
421.2		+	683.2	Mp = 223.6-229.1°C (dec)

5

EXAMPLES 422 AND 423

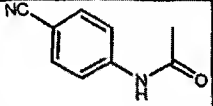

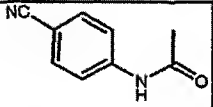

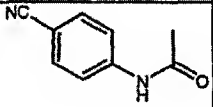

10

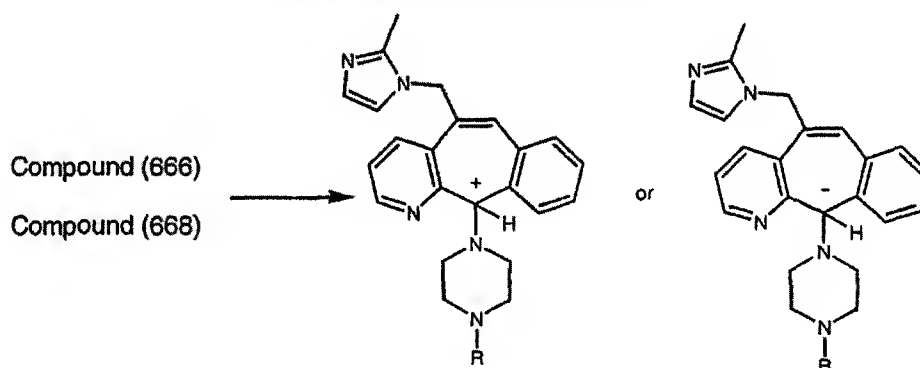

The appropriate compound (659) (+) enantiomer, (660) (-) enantiomer or (659A) (+) enantiomer from Preparative Example 56 above, was taken up in  $\text{CH}_2\text{Cl}_2$  treated with the corresponding isocyanate and stirred at room temperature over night.

15 The Crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in Table 10 below:

20

**Table 10**

Example #	R	Enantiomer	Comp #	Phys. Data.
422		+	684	Mp = 155.9-165.1°C
423		-	685	Mp = 154.2-164.8°C
492		+	806	Mp = 157.1-160.5°C MH <sup>+</sup> = 689

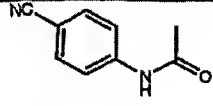

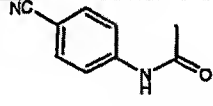

**EXAMPLES 424 AND 425**

5

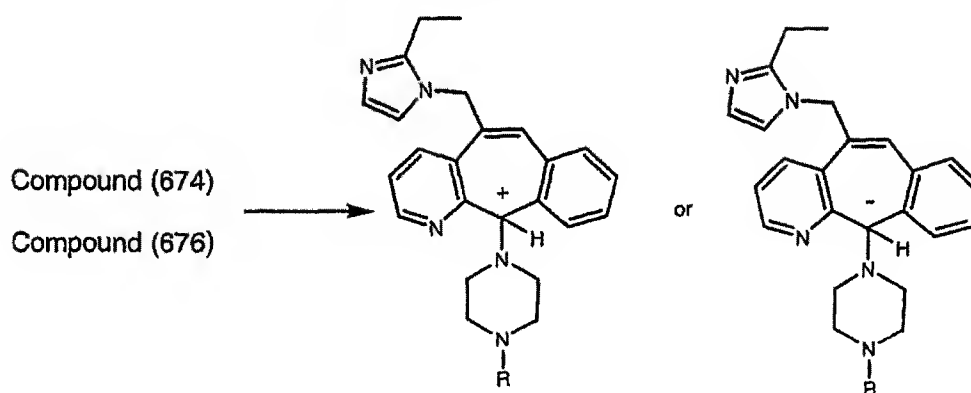

The appropriate (+) enantiomer (666) or (-) enantiomer (668) from Preparative Example 57 above, was taken up in CH<sub>2</sub>Cl<sub>2</sub>, treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was

10 purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in Table 11 below:

**Table 11**

Example #	R	Enantiomer	Comp #	Phys. Data.
424		+	686	Mp = 166-170°C [α] <sub>D</sub> <sup>25</sup> = +106.8° (1.45 mg/ 2 mL MeOH)
425		-	687	Mp = 170-176°C [α] <sub>D</sub> <sup>25</sup> = -91° (2.78 mg/ 2 mL MeOH)

285

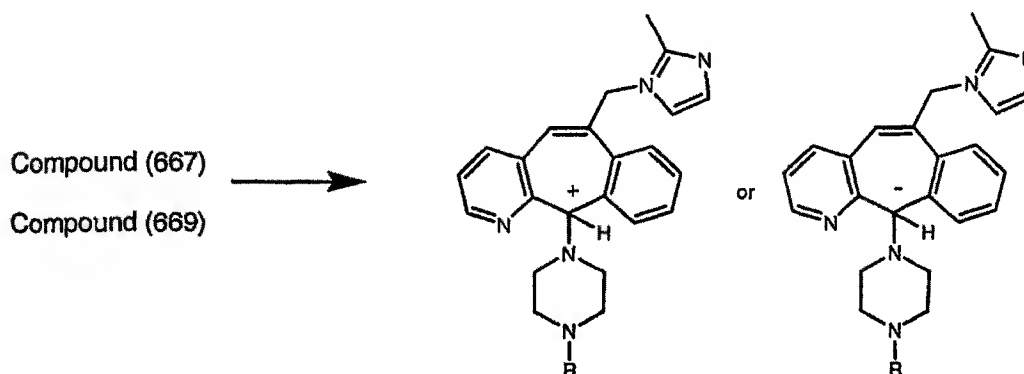

EXAMPLES 426 AND 427

- 5 The appropriate (+) enantiomer (674) or (-) enantiomer (676) from Preparative Example 58 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in Table 12 below:

10

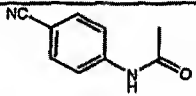

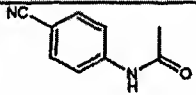

**Table 12**

Example #	R	Enantiomer	Comp #	Phys. Data.
426		+	688	Mp = 150-153°C
427		-	689	Mp = 154-158°C

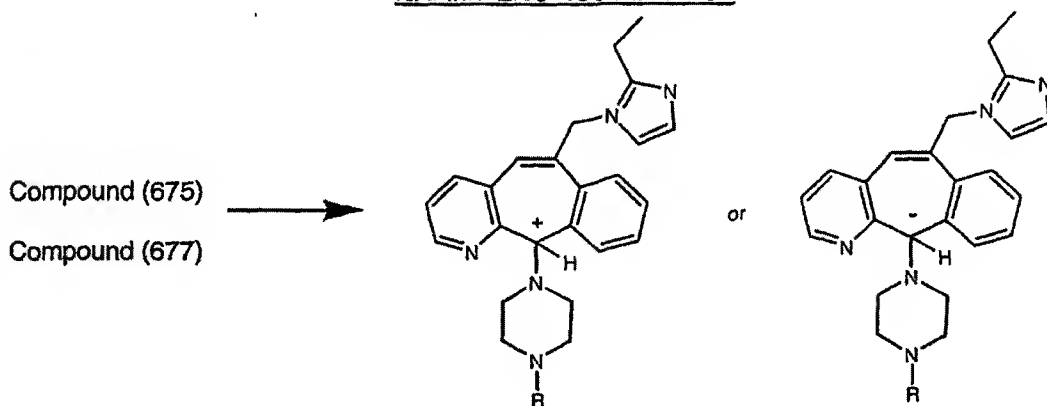

EXAMPLES 428 AND 429

15

The appropriate (+) enantiomer (667) or (-) enantiomer (669) from Preparative Example 57 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

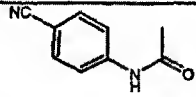

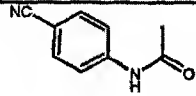

Example #	R	Enantiomer	Comp #	Phys. Data.
428		Isomer 1	690	$\text{MH}^+ = 516$
429		Isomer 2	691	$\text{MH}^+ = 516$

#### EXAMPLES 430 AND 431

10

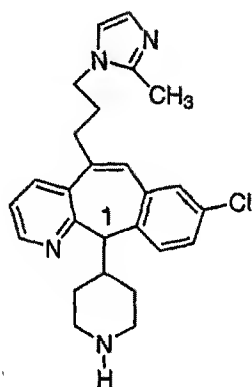

The appropriate (+) enantiomer (675) or (-) enantiomer (677) from Preparative Example 58 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

Example #	R	Enantiomer	Comp #	Phys. Data.
430		Isomer 1	692	$\text{MH}^+ = 530$
431		Isomer 2	693	$\text{MH}^+ = 530$

5

Type A

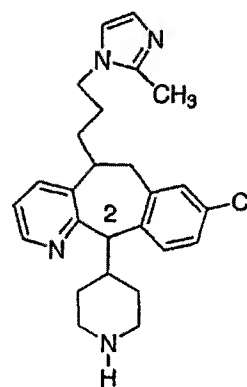

696a

Type B

697a

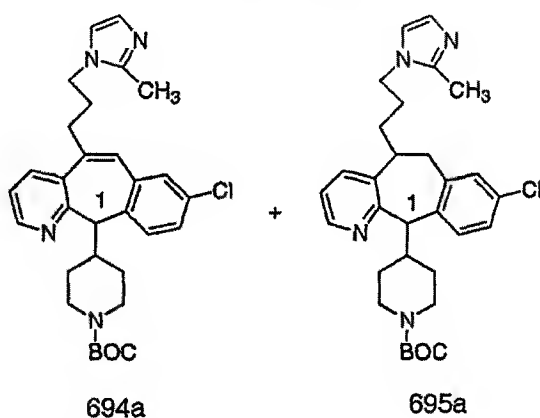

696b

697b

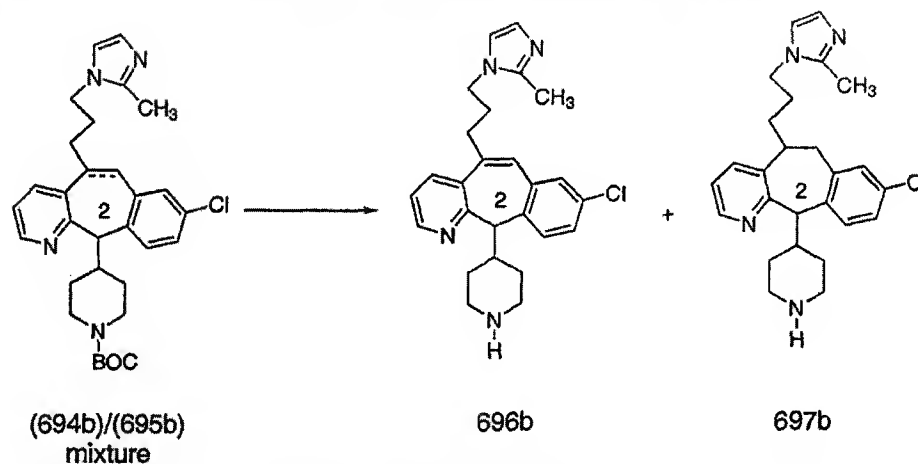

### Step A Preparation of Compounds (694a) and (695a)

5 To a stirred solution of 2-methyl imidazole (1.80 g, 21.97 mmol) in anhydrous DMF (40 mL) at room temperature, was added NaH (5.3 g, 21.97 mmol) and Compound (27) from Preparative Example 4, Step E (4.0 g, 7.33 mmol). The resulting solution was stirred at room temperature for 1 hr and concentrated to dryness, followed by extraction with EtOAc-NaHCO<sub>3</sub>. The combined organic layer was dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and concentrated to dryness to give the mixture of single bond and double bond compounds. These compounds were further purified by column chromatography on silica gel, eluting with 2%MeOH/NH<sub>3</sub>/98%CH<sub>2</sub>Cl<sub>2</sub> to yield: Pure Type A Compound (694) (0.450 g) (MH<sup>+</sup>=533) and a mixture of Type A (694) and Type B Compound (695) ( 2.55 g)(MH<sup>+</sup>=535).

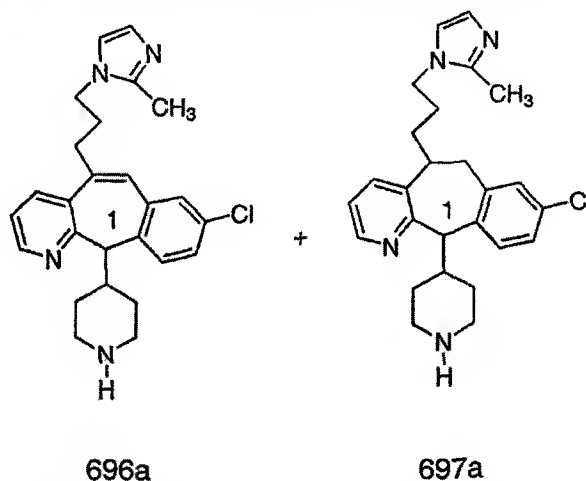

10

15 Compounds (694) and (695) were further purified by prep HPLC, eluting with 15%IPA/85%Hexane/0.2%DEA to give : Type B Compound (695a) (isomer 1; 0.58 g, MH<sup>+</sup>=535.4) and Type A Compound (694a) ( isomer 1; 0.61g, MH<sup>+</sup>= 533) and a mixture of compounds (694b) and (695b) ( isomer 2 products; 0.84g).

Step B      Preparation of Compounds (696b) and (697b)

The mixture of compounds (694b/695b) from Step A above (0.8 g, 1.5 mmol) in  
 5 4N HCl/Dioxane (40 mL) was stirred at room temperature for 3 hrs and concentrated  
 to dryness to give a mixture of deprotected compounds as product. The product was  
 further purified by HPLC, eluting with 15%IPA/85% hexane/0.2%DEA to give the pure  
 compound (696b) Type A (isomer 2; 0.29 g) and pure Compound (697b) Type B  
 (isomer 2, 0.19 g).

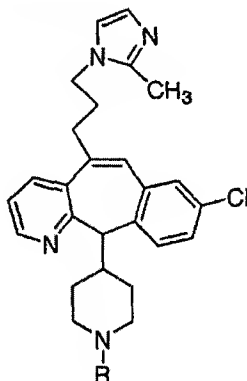

10

Step C      Preparation of Compounds (696a) and (697a)

Compounds (694a) and (695a) (pure isomer 1) were individually deprotected  
 using 4N HCl/Dioxane in essentially the same method as that of the isomer 2 products  
 15 described above, to give the corresponding N-H products (696a) Type A (isomer 1)  
 and (697a) Type B (isomer 1).

EXAMPLES 432-437

Reacting Compound (696a) (isomer 1) in essentially the same manner as in  
 Example 13 with the appropriate chloroformate or isocyanate, the following  
 5 compounds listed in Table 13 below, were prepared.

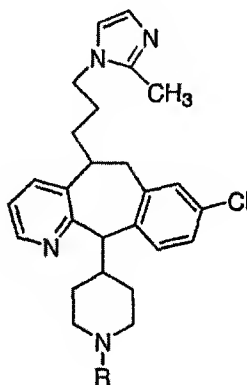

10 Table 13: 2-Methylpropylimidazole-5-Substituted Bridgehead Double bond Analogs

EXAMPLE #	R	COMPOUND #	PHYSICAL DATA
432		698	MH+=519.1
433		699	MH+=577.1
434		700	MH+=570.1

442		708	MH+=560.1

PREPARATIVE EXAMPLE 60  
COMPOUNDS (711a), (711b), (712a) AND (712b).

5      Step A      Preparation of Compounds (709a), (709b), (710a) and (710b)

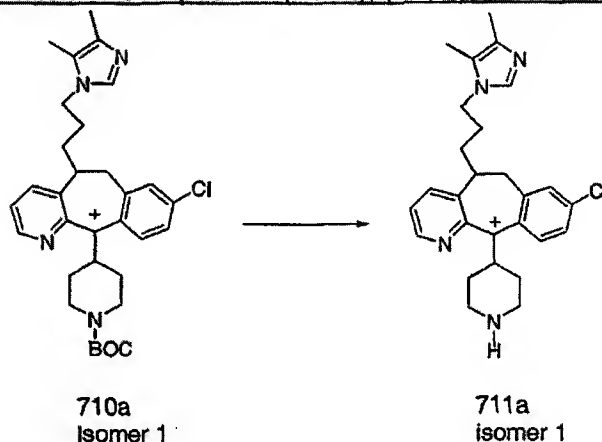

- To a stirred solution of 4,5-Dimethylimidazole (1.08 g, 11.25 mmol) in
- 10    anhydrous DMF (35 mL) at room temperature, was added NaH (0.27 g, 11.2 mmol) and stirred for 10 minutes, followed by the addition of Compound (27) from Preparative Example 4 Step E (4.0 g, 7.32 mmol). The resulting solution was stirred at room temperature overnight. To this solution was added the solution of 4,5-dimethylimidazole (0.35 g, 3.65 mmol) and NaH (0.088 g, 3.67 mmol) in DMF (5 mL).
- 15    The resulting solution was heated at 80°C-90°C for 4 hrs, then cooled down to room temperature, followed by extraction with EtOAc-H<sub>2</sub>O. The combined organic layer was

washed with brine, dried over  $\text{Na}_2\text{SO}_4$ , filtered and concentrated to dryness and purified by column chromatography on silica gel, eluting with 50%EtOAc/50%hexane to 5%MeOH/ $\text{CH}_2\text{Cl}_2$  to give the mixture of products Compound (709) Type A and Compound (710) Type B ( 1.2 g,  $\text{MH}^+=547.3$ ). The products were further purified by  
 5 prep HPLC, using a chiral AD column, eluting with 15%IPA/85%hexane/0.2%DEA to give 4 separate compounds:

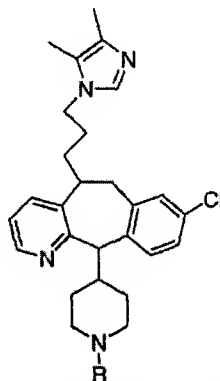

Compound (709a) isomer 1, type A (0.291 g,  $\text{MH}^+=547.3$ ), Compound (710a) isomer 1, type B (0.305 g,  $\text{MH}^+=549.3$ ) and  
 10 Compound (709b) isomer 2, type A (0.280 g,  $\text{MH}^+=547.3$ ), Compound (710b) isomer 2, type B ( 0.2 g,  $\text{MH}^+=549.3$ )

Step B      Preparation of Compounds (711a), (711b), (712a) and (712b)

Examples 443-447

Reacting Compounds (711a) and (711b) separately following the procedure described in Example 13 with the appropriate chloroformates or isocyanates, the following compounds listed in Table 15 below were prepared.

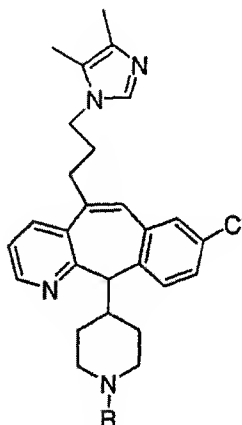

Table 15: 4,5-Dimethylpropylimidazole-5-Substituted Bridgehead Single bond Analogs

EXAMPLE #	R	COMPOUND #	PHYSICAL DATA

### PREPARATIVE EXAMPLE 61

#### PREPARATION OF COMPOUNDS (727a), (727b), (728a) AND (728b).

#### STEP A Preparation of Compounds (725a), (725b), (726a) and (726b).

296

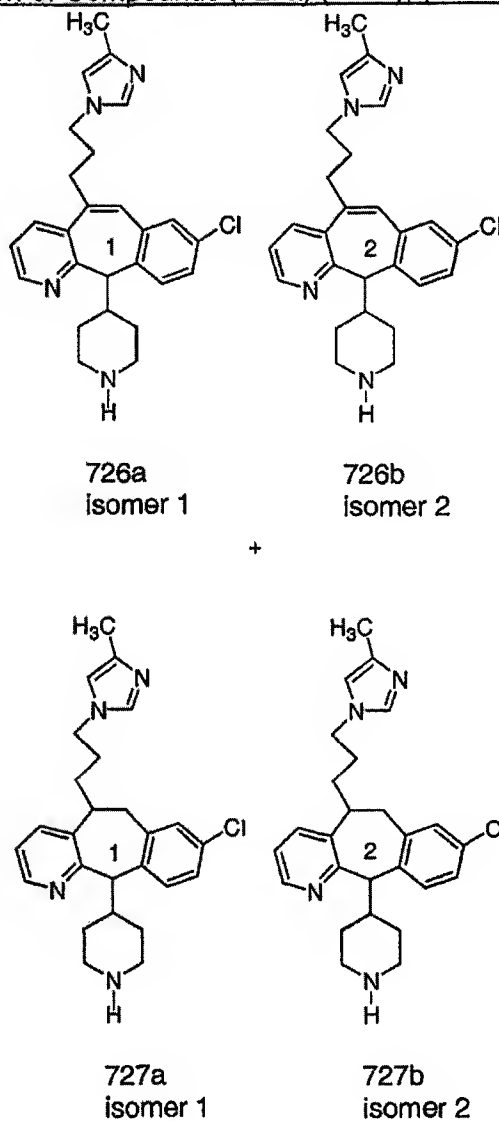

Compound (27) from Preparative Example 4, Step E was reacted in essentially the same manner as described in Preparative Example 60, Step A above

5 substituting 4-Methylimidazole for 4,5-Dimethylimidazole to obtain four separate compounds as products.

#### BOC derivatives

- 10 Compound (725a) isomer 1, type A (0.69 g,  $MH^+=533.1$ )
- Compound (725b) isomer 2, type A (0.10 g,  $MH^+=533.1$ )
- Compound (726a) isomer 1, type B (0.35 g,  $MH^+=535.1$ )
- Compound (726b) isomer 2, type B, (0.22 g,  $MH^+=535.1$ )

**STEP B**      Preparation of Compounds (727a) (727b), (728a), (728b)

5

In essentially the same manner as described in Preparative Example 60, Step B, the -NH derivatives were prepared:

Compounds:

(727a) isomer 1 type B (0.3 g, 100% yield,  $MH^+ = 435.1$ ),

10

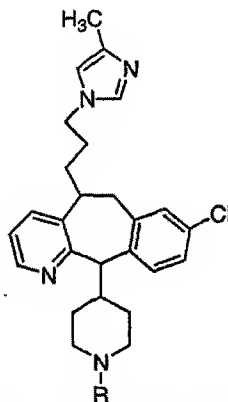

(727b) isomer 2, type B;

(728a) isomer 1, type A and

(728b) isomer 2, type A.

Examples 455-459

Reacting Compounds (727a) and (727b) separately following the procedure described in Example 13 with the appropriate chloroformate or isocyanate, the following compounds listed in Table 17 below were prepared.

Table 17: 4-Methylpropylimidazole-5-Substituted Bridgehead Single bond Analogs

EXAMPLE #	R	COMPOUND #	PHYSICAL DATA
455		729	MH+=561.1
456		730	MH+=581.1

**EXAMPLE 470**  
**PREPARATION OF COMPOUND (748).**

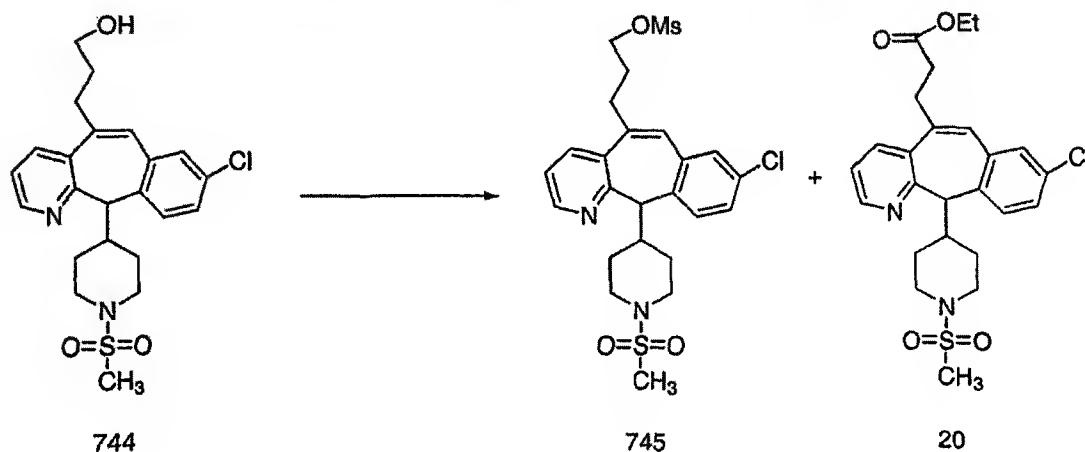

**Step A**      **Preparation of compound (744).**

5

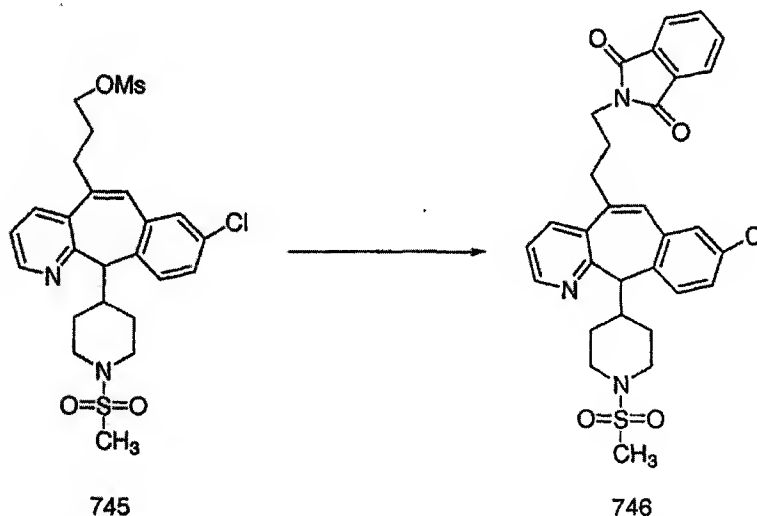

To a stirred solution of Compound (24) from Preparative Example 4, Step D (4.0 g, 8.2 mmol) under nitrogen at room temperature, was added CuCl (0.7 g, 8.2 mmol). The solution was then cooled to 0°C, followed by portion wise addition of NaBH<sub>4</sub> (4.66 g, 123,2 mmol). The resulting solution was stirred at 0°C for 6 h., concentrated to dryness, then extracted with CH<sub>2</sub>Cl<sub>2</sub>-sat.NaHCO<sub>3</sub>. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated and purified by column chromatography on 200 mL of normal phase silica gel, eluting with 20%EtOAc/CH<sub>2</sub>Cl<sub>2</sub> to give Compound (744) (3.62 g, 99% yield, MH<sup>+</sup>=447).

**Step B**      **Preparation of compounds (745) AND (20).**

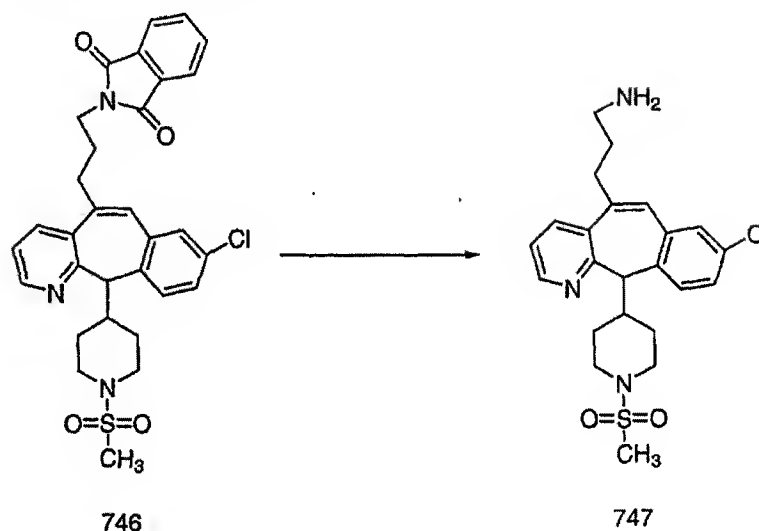

To a stirred solution of Compound (744) from Step A above ( 3.0 g, 5.7 mmol) in  $\text{CH}_2\text{Cl}_2$  (100 mL) under nitrogen at room temperature, was added triethyl amine (2.4 mL, 17.1 mmol) and methanesulfonyl chloride (0.98 g, 8.7 mmol). The resulting solution was stirred at room temperature over night, then washed with saturated  $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , filtered, concentrated to dryness and purified by Biotage column chromatography, eluting with 30%EtOAc/70% $\text{CH}_2\text{Cl}_2$  to give Compound (745) as a white solid ( 1.19 g,  $\text{MH}^+=525.1$ ) and Compound (20) (1.31 g,  $\text{MH}^+=489.1$ )

Step C      Preparation of compound (746).

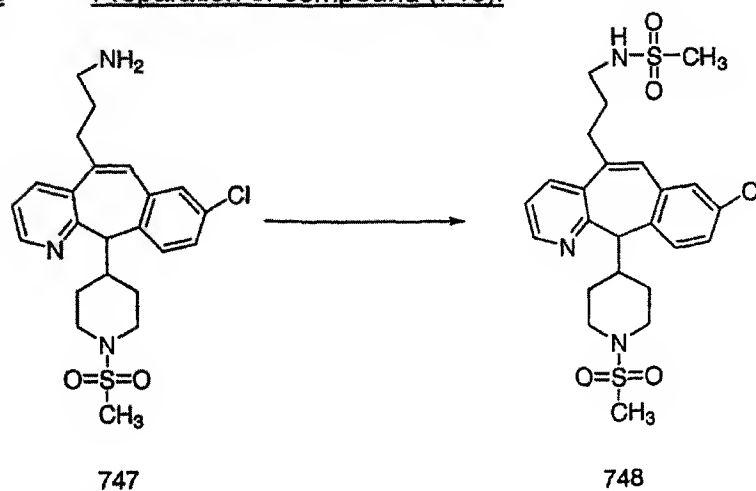

To a stirred solution of Compound (745) from Step B above (2.17 g, 4.3 mmol) in DMF (50 mL) under nitrogen at room temperature was added phthalimide potassium derivative (1.20 g, 0.5 mmol). The resulting solution was heated to 90°C for 4 h., cooled down to room temperature, concentrated to dryness and extracted with  $\text{CH}_2\text{Cl}_2$ -sat. $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 50%-70%EtOAc/hexane to give Compound (746) as a white solid (1.76 g, 71 % yield,  $\text{MH}^+=577.0$ ).

Step D      Preparation of compound (747).

5

To a stirred solution of Compound (746) from Step C above (1.67 g, 2.9 mmol) in EtOH (50 mL) at room temperature, was added hydrazine monohydrate (0.29 g, 5.8 mmol). The resulting solution was heated to reflux for 4 h. cooled down to room temperature, concentrated to dryness and extracted with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to dryness to give

10 Compound (747) as a white solid (1.23 g, 95% yield, MH<sup>+</sup>= 446.1)

Step E      Preparation of compound (748).

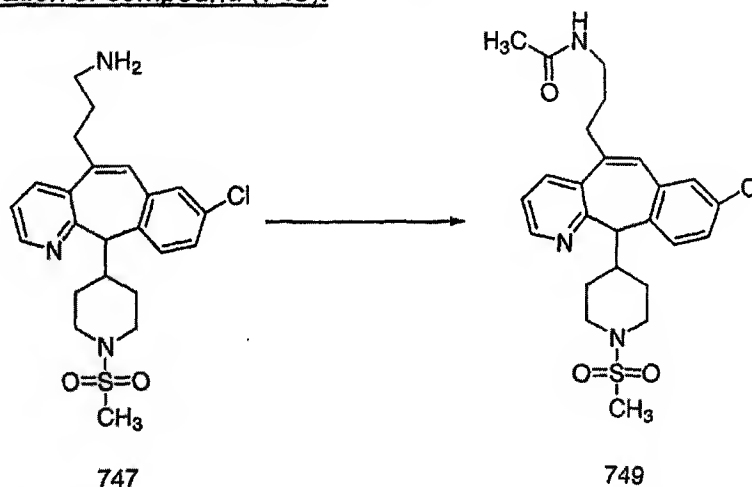

15

To a stirred solution of Compound (747) from Step D (0.1 g, 0.22 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (5 mL) under nitrogen at room temperature, was added TEA (0.06 mL, 0.45

mmol) and methanesulfonyl chloride (0.038 g, 0.34 mmol). The resulting solution was stirred at room temperature over night, then washed with sat.  $\text{NaHCO}_3$ . The combined organic layer was dried over  $\text{Na}_2\text{SO}_4$ , filtered and purified by column chromatography on silica gel, eluting with 3%  $\text{MeOH-NH}_3/\text{CH}_2\text{Cl}_2$  to give Compound (748) as a white solid (0.087 g, 76% yield,  $\text{MH}^+=524.0$ )

### EXAMPLE 471

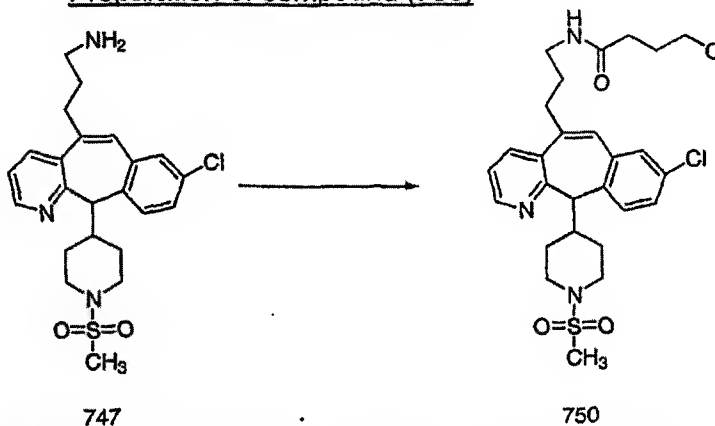

Preparation of compound (749).

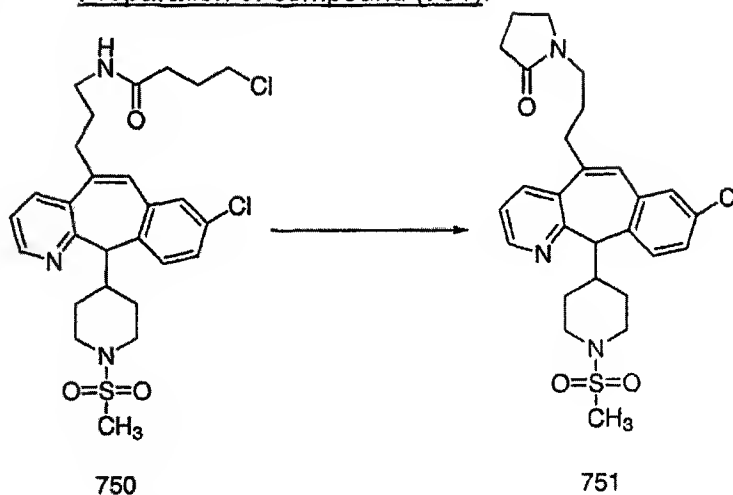

Reacting Compound (747) from Example 470 Step D above in essentially the same manner as in Step E of Example 470 substituting acetylchloride, Compound (749) was prepared.(0.048 g, 45% yield, MH+= 488.2).

### EXAMPLE 472

**Step A**      **Preparation of compound (750)**

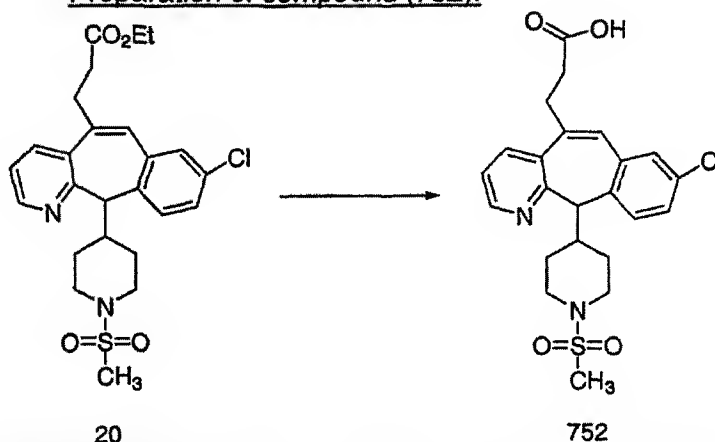

Reacting Compound (747) from Example 470 Step D above in essentially the same manner as in Step E of Example 470 substituting 4-Chlorobutyryl chloride (ACROS), Compound (750) was prepared ( 0.67 g, 100% yiled, MH<sup>+</sup>=514.1).

Step B      Preparation of compound (751).

- 5            To a stirred solution of Compound (750) from Step A (0.575 g, 1.11 mmol) in toluene (15 mL) under nitrogen at room temperature, was added  $K_2CO_3$  (0.55 g, 4.01 mmol). The resulting solution was stirred at room temperature over the weekend then heated to 55°C for 7 h. The solution was then cooled down to room temperature, filtered, concentrated to dryness and purified by column chromatography, eluting with
- 10    1.5% MeOH- $NH_3$ /98.5%  $CH_2Cl_2$  to give Compound (751) as a white solid (0.15 g, 26% yield,  $MH^+ = 524.1$ )

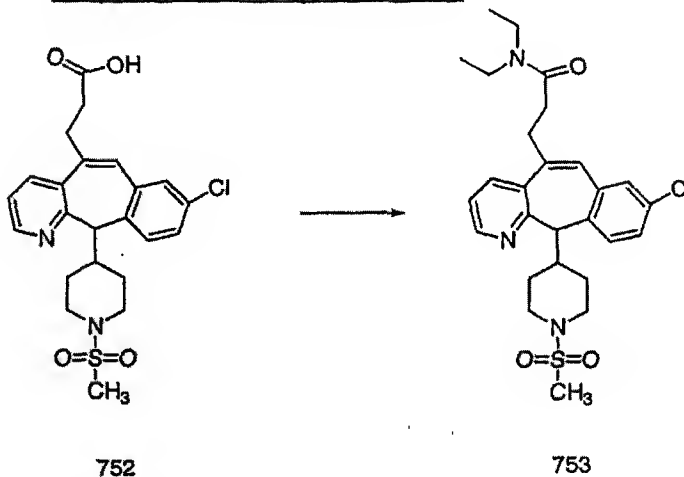

EXAMPLE 473  
Step A      Preparation of compound (752).

- 15            To a stirred solution of Compound (20) from Example 470, Step B (0.67 g, 1.37 mmol) in THF (5 mL), was added 1N NaOH solution (6.9 mL, 6.88 mmol). The resulting solution was stirred at room temperature overnight and concentrated to dryness. The solution was then acidified with 10% citric acid and then extracted with

CH<sub>2</sub>Cl<sub>2</sub>. The combined organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to dryness to give Compound (752) as a light yellow product ( 0.33 g, 52% yield, MH<sup>+</sup>=461.1)

**Step B**      **Preparation of compound (753).**

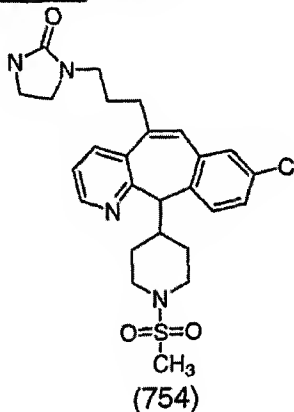

5

To a stirred solution of Compound (752) from Step A above (0.1 g, 0.23 mmol) in  $\text{CH}_2\text{Cl}_2$  (5 mL) under nitrogen at room temperature, was added oxalyl chloride (0.97 g, 7.62 mmol) and diethyl amine (0.47 g, 6.43 mmol). The resulting solution was stirred at room temperature for 1 hr and concentrated to dryness. The crude product was then purified by column chromatography, eluting with 2% MeOH- $\text{NH}_3$ /98%  $\text{CH}_2\text{Cl}_2$  to give Compound (753) as a white solid (0.051 g, 49.5% yield,  $\text{MH}^+ = 516.1$ )

### EXAMPLE 474

### Preparation of compound (754)

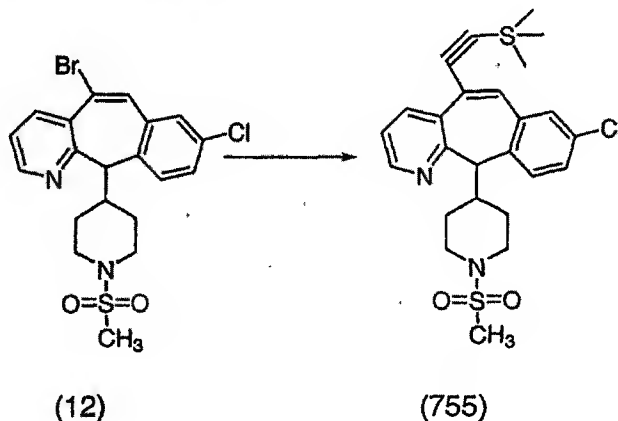

15

To a stirred solution of 2-imidazolidone (0.22 g, 2.0 mmol) in DMF (10 mL) was added NaH (0.28 g, 2.0 mmol). The resulting solution was stirred at room temperature for 1 hr. This solution was then added into a solution of Compound (22) from  
5 Preparative Example 3, Step C (0.67 g, 1.3 mmol) in DMF (20 mL) under nitrogen inlet at room temperature. The resulting solution was heated to 90°C for 2 hrs, concentrated to dryness, then extracted with CH<sub>2</sub>Cl<sub>2</sub>-sat. NaHCO<sub>3</sub>. The combined organic layer was then dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 3% MeOH-NH<sub>3</sub>/97%  
10 CH<sub>2</sub>Cl<sub>2</sub> to give a light yellow solid (754) (0.17 g, 25% yield, MH<sup>+</sup>=515.1).

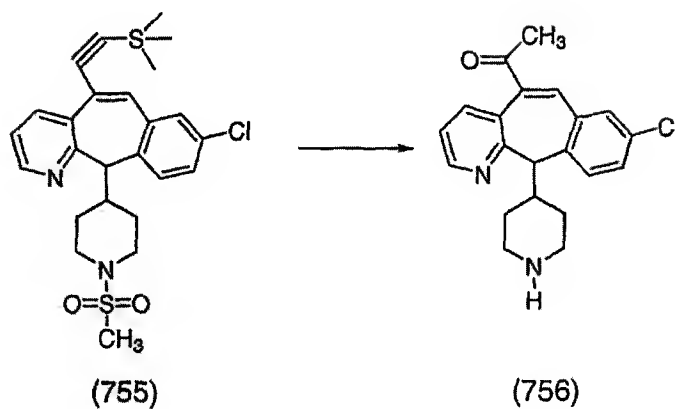

EXAMPLE 475  
PREPARATION OF COMPOUND (762)

Step A: Preparation of compound (755).

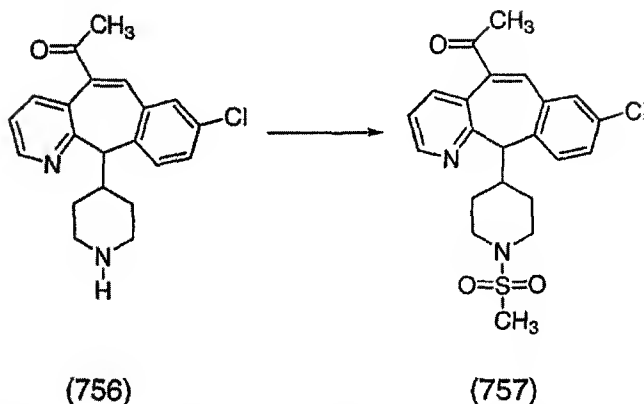

20

To a stirred solution of Compound (12) from Preparative Example 2, Step B (15.75 g, 0.336 mmol) in DMF (200 mL) under nitrogen inlet at room temperature, was added trimethylsilylacetalene (12.14 g, 124 mmol), bis(triphenylphosphine)palladium  
25 (II)dichloride (0.47 g, 0.67 mmol), Et<sub>3</sub>N (13.1 mL, 94 mmol), CuI (0.89 g, 4.7 mmol) and NaI (1.53 g, 10 mmol). The resulting solution was stirred at room temperature overnight, concentrated to dryness, then extracted with CH<sub>2</sub>Cl<sub>2</sub>-H<sub>2</sub>O. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 20% EtOAc/80% hexane to give the  
30 product (755) (12.35 g, M=485).

Step B: Preparation of compound (756).

10 A solution of Compound (755) from Step A above (4.48 g, 9.24 mmol), in concentrated HCl (100 mL) was heated to reflux overnight. The solution was then cooled down to room temperature and basified with 50% NaOH solution (w/w) and then extracted with CH<sub>2</sub>Cl<sub>2</sub>. The combined organic layer was dried over MgSO<sub>4</sub>, filtered and concentrated to dryness to give an off white solid (756) (4.40 g, 100% yield, MH<sup>+</sup>=353.1).

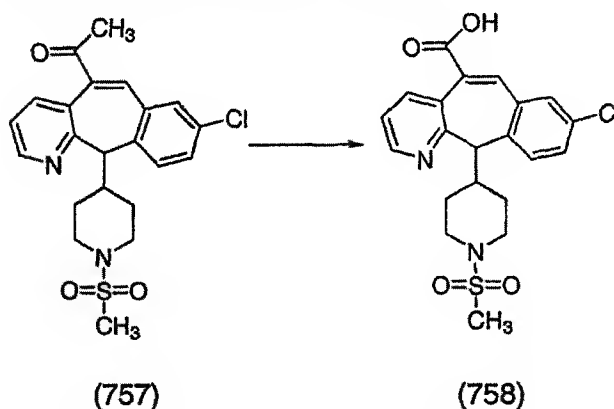

Step C: Preparation of compound (757).

5

To a stirred solution of Compound (756) from step B (3.15 g, 8.93 mmol) in  $\text{CH}_2\text{Cl}_2$  (100 mL) was added  $\text{Et}_3\text{N}$  (2.5 mL, 17.85 mmol) and methanesulfonyl chloride (0.51 g, 4.46 mmol). The resulting solution was stirred at room temperature overnight. The solution was then washed with saturated  $\text{NaHCO}_3$  and the organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated to dryness to give a crude product (4.31 g, 100% yield,  $\text{MH}^+=431.1$ )

Step D: Preparation of compound (758).

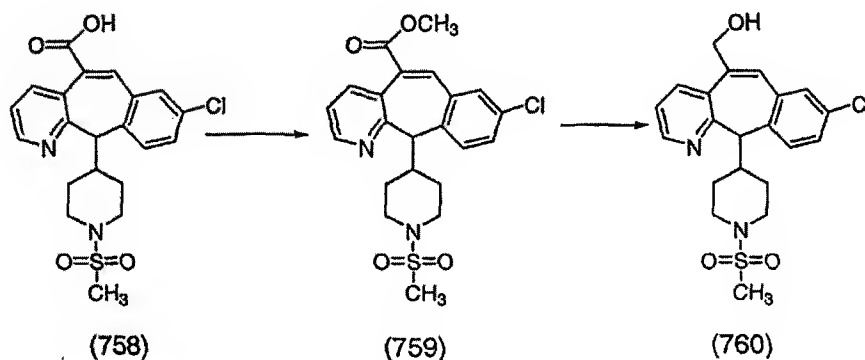

20

The solution of Compound (757) from Step C (3.84 g, 8.91 mmol) in 4%  $\text{NaClO}$  (150 mL) and 45%  $\text{NaOH}$  solution (15 mL) was heated to reflux for 2 hrs, then cooled down to room temperature, followed by addition of saturated sodium bisulfite solution (150 mL). The solution was then adjusted to  $\text{pH}=6.5$  and extracted with  $\text{CH}_2\text{Cl}_2$ . The

25

combined organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated to dryness to give a light yellow solid (3.31 g, 86% yield,  $\text{MH}^+=433.1$ ).

**Step E:** Preparation of compound (759).

5

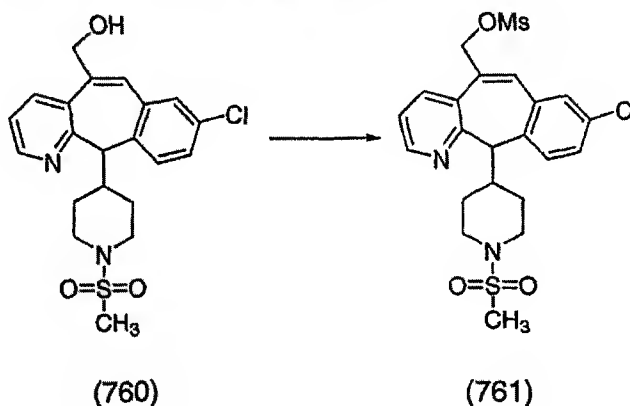

To a stirred solution of Compound (758) from step D (3.31 g, 7.65 mmol) in toluene (80 mL) and MeOH (50 mL) under nitrogen at room temperature, was added (trimethylsilyl)diazomethane (2.0M in hexane)(3.4 mL, 68.8 mmol) at 0°C, until the colorless solution turned to yellow solution. The resulting solution was stirred at 0°C for half an hour and concentrated to dryness to give a crude product (759).

To a stirred cooling solution of the crude product (759) from above, in THF (30 mL) at 0°C was added DIBAL (15.3 mL, 15.3 mmol). The resulting solution was stirred at 0°C for 2hrs, followed by extraction with 10% citric acid and 1N NaOH solution. The combined organic layer was dried over  $\text{MgSO}_4$ , filtered and concentrated to dryness to give a light yellow solid (760) (2.90 g, 90% yield,  $\text{MH}^+=419.1$ ).

15

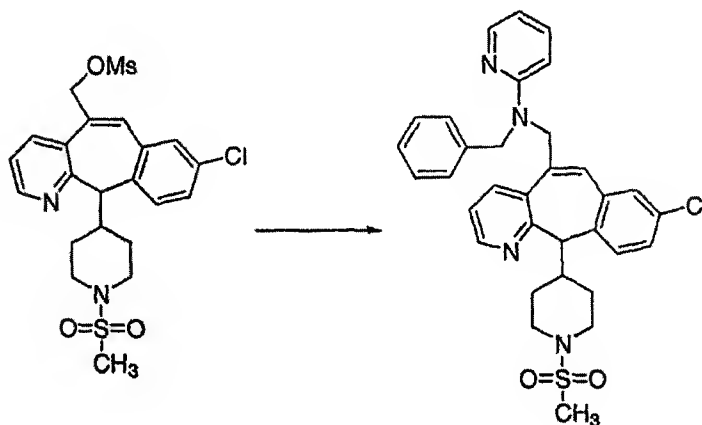

**Step F:** Preparation of compound (761).

20

Reacting Compound (760) in essentially the same manner as Step C above, Compound (761) was prepared.

Step G: Preparation of Compound (762).

(761)

(762)

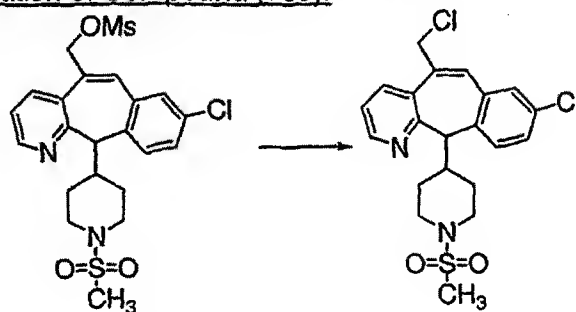

To a stirred solution of 2-benzylaminopyridine (0.115 g, 0.624 mmol) in DMF (10 mL) at room temperature, was added NaH (9.81 g, 0.41 mmol) and stirred for 0.5 hr.

- 10 To a stirred solution of mesylate compound from step F (0.2 g, 0.41 mmol) in DMF (10 mL) under nitrogen inlet, was added the solution of 2-benzylaminopyridine in DMF above. The resulting solution was heated to 90°C for 3hrs, concentrated to dryness followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-sat. NaHCO<sub>3</sub>, then dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting
- 15 with 5% MeOH-NH<sub>3</sub>/CH<sub>2</sub>Cl<sub>2</sub> to give a light yellow solid (762) (0.03 g, 13% yield, MH<sup>+</sup>=585.1).

EXAMPLE 476

PREPARATION OF COMPOUND (768)

Step A: Preparation of Compound (763).

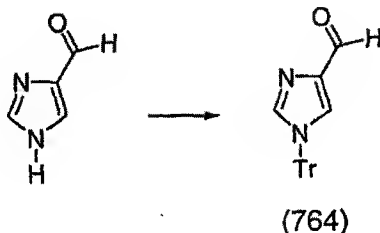

(761)

(763)

20 In essentially the same manner as Example 475, Step E, Compound (763) was prepared.

Step B:      Preparation of Compound (764).

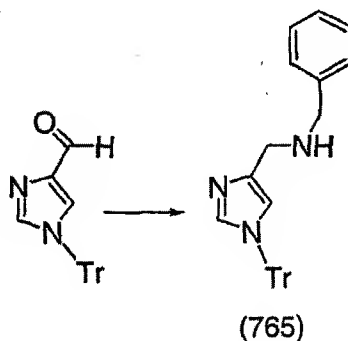

5

To a stirred solution of 4(5)-imidazolecarboxaldehyde (20.0 g, 0.208 mmol) in  $\text{CH}_2\text{Cl}_2$  (200 mL), was added  $\text{Et}_3\text{N}$  (29.0 mL, 0.208 mmol). The solution was then cooled down at  $0^\circ\text{C}$ , followed by addition of triphenylmethylchloride (52.8 g, 0.18 mmol) at  $0^\circ\text{C}$ . The resulting solution was stirred at room temperature overnight and then washed it with brine, water and concentrated to dryness to give a white solid (63.0 g, 98% yield,  $\text{MH}^+=339.1$ )

10

Step C:      Preparation of Compound (765).

15

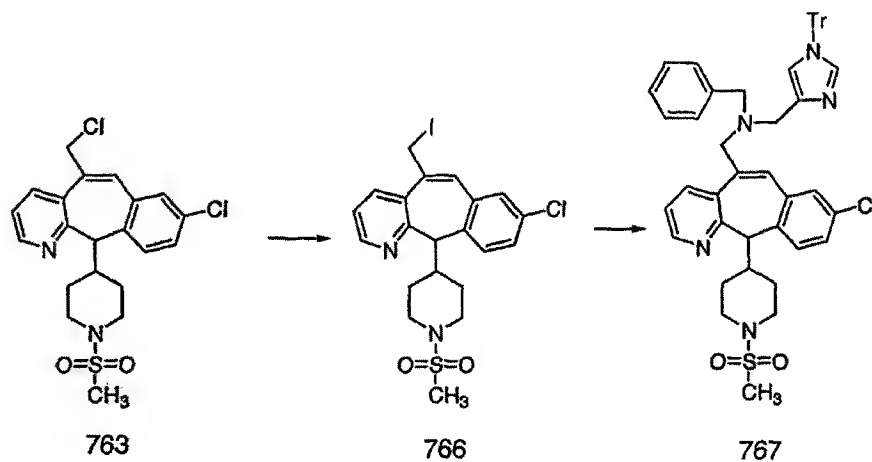

20

To a stirred solution of starting material benzyl amine (0.99 g, 8.87 mmol) in  $\text{MeOH}$  (50 mL) under nitrogen inlet at room temperature, was added sodium acetate (0.73 g, 8.87 mmol), 3 $^\circ\text{A}$  molecular sieves (3.0 g) and aldehyde (3.0 g, 8.87 mmol). The resulting solution was stirred at room temperature overnight, followed by addition of  $\text{NaBH}_4$  (0.67 g, 17.74 mmol), then stirred for 4 hrs and concentrated to dryness, followed by extraction with  $\text{CH}_2\text{Cl}_2$ -1N  $\text{NaOH}$ . The combined organic layer was dried over  $\text{MgSO}_4$ , filtered, concentrated to dryness and purified by column chromatography

25

on silica gel, eluting with 2% MeOH-NH<sub>3</sub>/98% CH<sub>2</sub>Cl<sub>2</sub> to give light yellow oil (3.75 g, 98% yield, MH<sup>+</sup>=430.2)

**Step D: Preparation of Compound (767).**

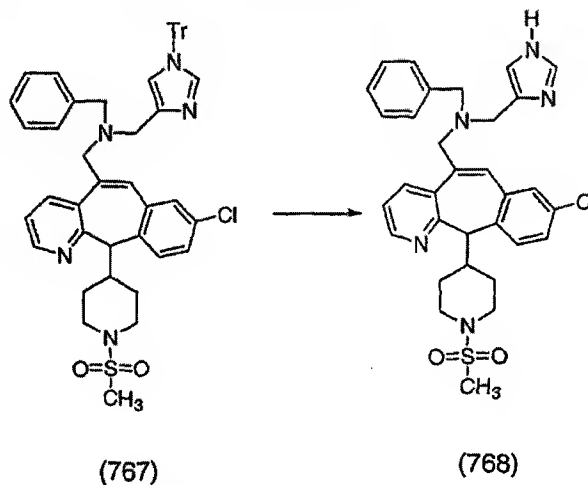

5

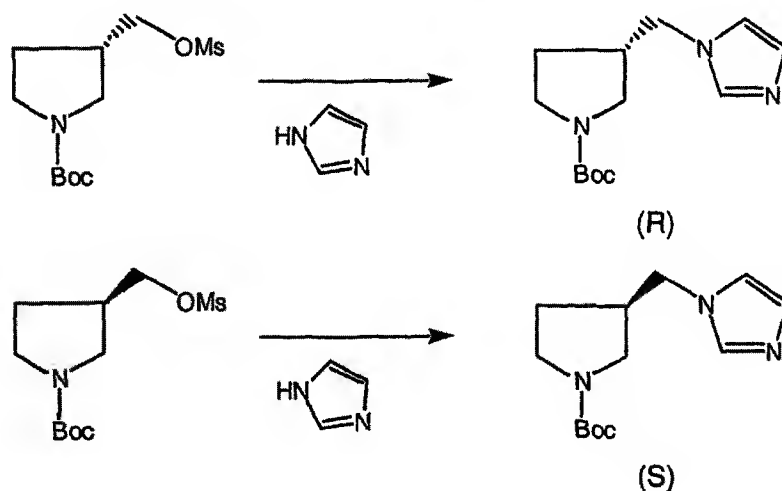

To a stirred solution of Compound (764) from step B (0.41 g, 1.14 mmol) in DMF (10 mL) under nitrogen at room temperature, was added NaH (0.02 g, 0.84 mmol). The resulting solution was stirred at room temperature for 1 hr.

To a stirred solution of Compound (763) from step A (0.4 g, 0.84 mmol) in acetone (30 mL) under nitrogen inlet at room temperature, was added NaI (0.12 g, 0.84 mmol). The resulting solution was heated to reflux for 1 hour and then concentrated to dryness to afford Compound (766). To crude Compound (766) was added, DMF (10 mL) and the solution of Compound (764) from above and NaH (0.02 g, 0.84 mmol). The resulting solution was heated to 90°C for overnight, then concentrated to dryness and purified by column chromatography on silica gel, eluting with 2% MeOH-NH<sub>3</sub>/98% CH<sub>2</sub>Cl<sub>2</sub> to give Compound (767) as a yellow solid (0.23 g, 33% yield, MH<sup>+</sup>=830.4)

15

**Step E: Preparation of Compound (768).**

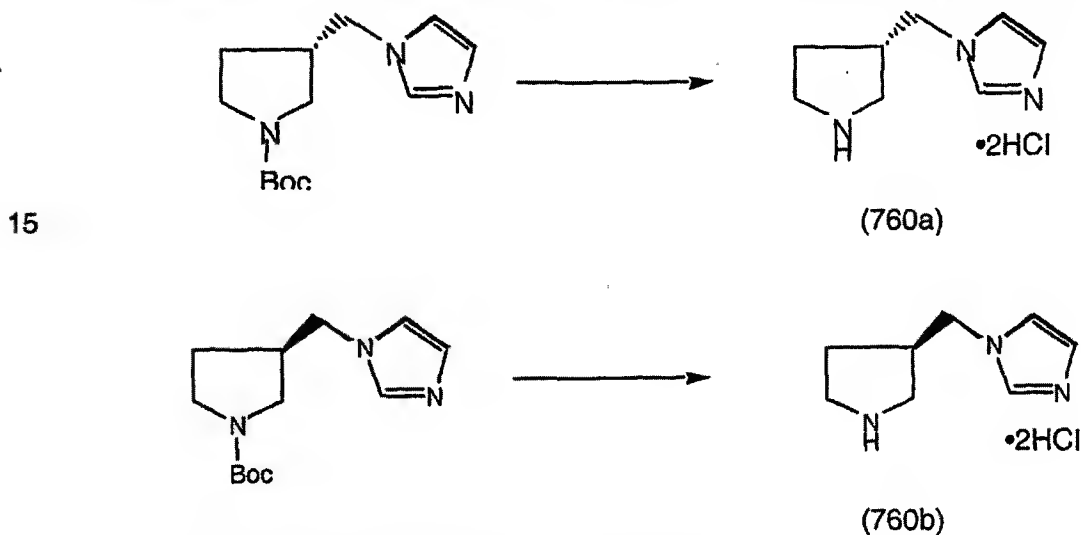

A solution of Compound (767) from step C (0.238 g, 0.29 mmol) in 80% acetic acid in H<sub>2</sub>O was heated to reflux for 2 hrs and then concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-1N NaOH. The combined organic layer was dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 3% MeOH-NH<sub>3</sub>/97%CH<sub>2</sub>Cl<sub>2</sub> to give white solid ( 0.10 g, 62% yield, M=588.2).

**PREPARATIVE EXAMPLE 62****Step A 1N-tert-BUTOXYCARBONYL-3(R) AND 3(S) -(1H-IMIDAZOL-1-YL) METHYL) PYRROLIDINES.**

3(R)-(3-Methanesulfonyloxymethyl)pyrrolidine (J. Med. Chem. 1990, 33, 77-77) (0.993g, 3.56 mmoles) was dissolved in anhydrous DMF (25 mL) and sodium imidazole (0.6g, 10 mmoles) was added. The mixture was heated at 60° C for 2h and then evaporated to dryness. The product was extracted with CH<sub>2</sub>Cl<sub>2</sub> and washed with  
 5 brine. CH<sub>2</sub>Cl<sub>2</sub> extract was evaporated to dryness to give the titled compound (1.1409g, 100%), ESMS: FABMS (M+1) = 252;  $\delta_H$  (CDCl<sub>3</sub>) 1.45 (s, 9H), 1.5-1.7 (m, 1H), 1.9 - 2.1 (m, 1H), 2.5-2.7 (m, 1H), 3.0-3.2 (m, 1H), 3.3- 3.6 (m, 2H), 3.9 (dd, 2H), 6.9 (s, 1H), 7.1(s, 1H), 7.45 (s, 1H)

In a similar manner, (S) isomer was prepared from 3(S)-(3-  
 10 Methanesulfonyloxymethyl)pyrrolidine (0.993g, 3.56 mmoles to give the title compound (1.1409g, 100%).

Step B      3(R) AND 3(S)-(1H-IMIDAZOL--1-YL)METHYLPYRROLIDINES

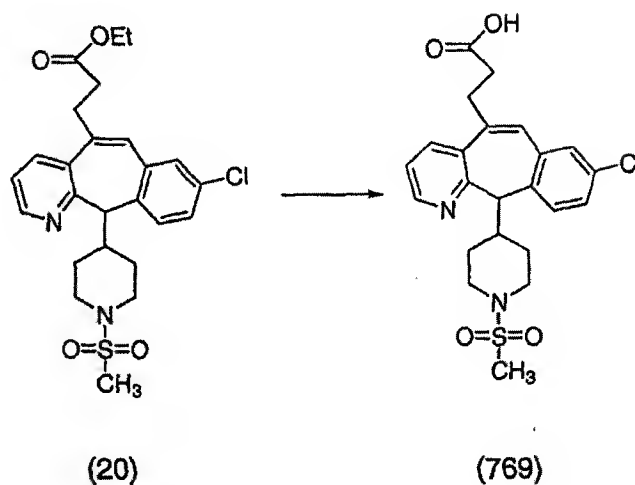

The title compound(0.48g, 1.91 mmoles) from Step A was stirred in 4N HCl in  
 20 dioxane (10 mL) for 2h and then evaporated to dryness to give the title compound which was used to couple with the tricylic acid.

In a similar manner (S) isomer was prepared.

EXAMPLE 477PREPARATION OF COMPOUND (771)Step A: Preparation of Compound (769).

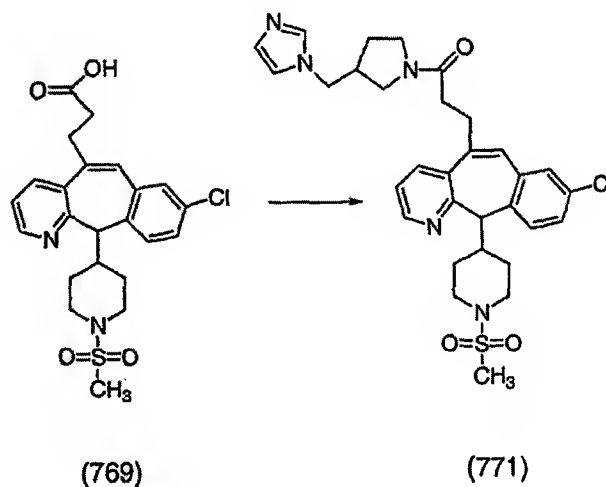

5

To a stirred solution of Compound (20) from preparative example 3 step B (4.86 g, 9.94 mmol) in EtOH (100mL), was added 1N LiOH (80 mL). The resulting solution was then stirred at room temperature overnight and concentrated to dryness, followed by dissolving in CH<sub>2</sub>Cl<sub>2</sub>. The solution was then adjusted to pH=6.5-7.0 with 1N HCl. The aqueous layer was then separated and concentrated to dryness, then dissolved in THF to give the lithium salt (4.86 g, 100 %yield, M+Li=467.1)

Step B: Preparation of Compound (771).

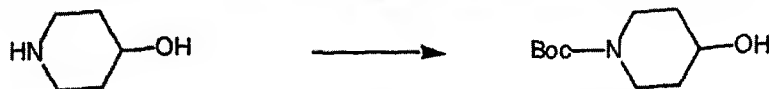

15

To a stirred solution of Compound (769) from step A above (0.38 g, 0.84 mmol) in DMF (10mL) under nitrogen inlet at room temperature, was added Compound (770) from Preparative Example 62 (0.163 g, 1.09mmol), benzotriazol-N-oxtris (dimethyl - amino)phosphoniumhexafluoro phosphate (0.44 g, 1.01 mmol) and Et<sub>3</sub>N (0.5 mL, 3.36 mmol). The resulting solution was stirred at room temperature overnight and concentrated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub>-10% Citric acid. The combined organic layer was then washed with saturated NaHCO<sub>3</sub>, brine, dried over MgSO<sub>4</sub>, filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 3% MeOH-NH<sub>3</sub>/CH<sub>2</sub>Cl<sub>2</sub> to give a light yellow solid (0.12 g, M=594.2).

PREPARATIVE EXAMPLE 63  
COMPOUND (772)

Step A 1N-tert-BUTOXYCARBONYL-4-HYDROXY - PIPERIDINE.

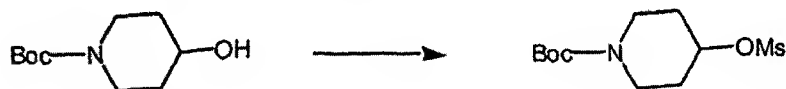

15

To a solution of 4-hydroxy-piperidine (2g, 19.78 mmoles) and triethylamine (4.16 mL, 29.67 mmoles) in CH<sub>2</sub>Cl<sub>2</sub> (20mL), di-tert-butyl dicarbonate (5.18g, 23.72 mmoles) was added and stirred at room temperature for 16h. The solution was diluted with CH<sub>2</sub>Cl<sub>2</sub> and washed with water, dried (MgSO<sub>4</sub>) filtered and evaporated to give the title compound (3.95g, 99%). FABMS (M+1) = 202.

20

Step B 1N-tert-BUTOXYCARBONYL-4-METHANESULFONYLOXY-PIPERIDINE.

25

The title compound from Step A above (3.5g, 17.39 mmoles) and triethylamine (4.85mL, 34.79 mmoles) were dissolved in CH<sub>2</sub>Cl<sub>2</sub> (30 mL) and the mixture was stirred under nitrogen at 0°C. Methanesulfonylchloride (1.62 mL, 20.88 mmoles) was added and the solution was stirred at room temperature for 2h. The solution was diluted with CH<sub>2</sub>Cl<sub>2</sub> and washed with saturated aqueous sodium bicarbonate, water and dried (MgSO<sub>4</sub>), filtered and evaporated to dryness to give the title compound (4.68g, 96.4 %). ESMS: m/z = 280 (MH<sup>+</sup>)

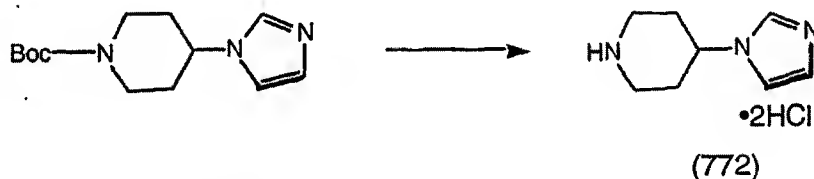

30

Step C      1N-tert-BUTOXYCARBONYL-4-(1H-IMIDAZOL-1-YL) -  
PIPERIDINE

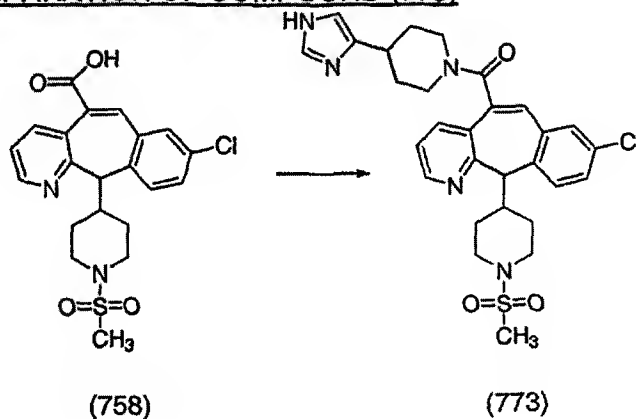

A solution of the title compound from Step B (4.0g, 14.32 mmol) in DMF (120 mL) was added to a stirred solution of NaH (0.52g, 21.66 mmol) and imidazole (1.46g, 21.47 mmol) in DMF (20 mL) under nitrogen atmosphere. The mixture was stirred at 60° C for 16h. DMF was evaporated *in vacuo*. The resulting crude product was extracted with CH<sub>2</sub>Cl<sub>2</sub> and the extract was successively washed with water and brine, and the CH<sub>2</sub>Cl<sub>2</sub> was evaporated to leave the title residue which was chromatographed on silica gel using 3% (10% conc NH<sub>4</sub>OH in methanol)- CH<sub>2</sub>Cl<sub>2</sub> as eluant to give the title compound (0.94 g, 26%). FABMS (M+1) = 252; <sup>1</sup>H (CDCl<sub>3</sub>) 1.4 (s, 9H), 1.6-1.8 (m, 2H), 2.0 (dd, 2H), 2.8 (dt, 2H), 4.05 (m, 1H), 4.2 m, 2H), 6.9 (s, 1H), 7.0 (s, 1H), 7.65 (s, 1H).

**Step D 4-(1H-IMIDAZOL-1-YL) -PIPERIDINE.**

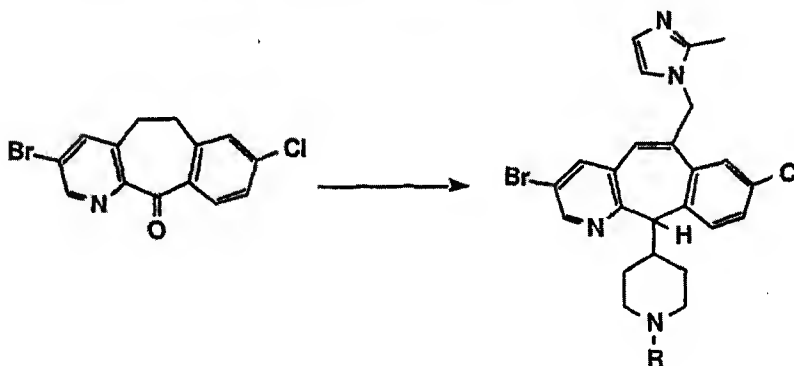

The title compound(0.21g, 0.836 mmoles) from Step C was stirred in 4N HCl in dioxane (5 mL) for 2h and then evaporated to dryness to give the title compound (772)which was used to couple with the tricyclic acid.

**EXAMPLE 478**  
**PREPARATION OF COMPOUND (773)**

To a stirred solution of Compound (758) from Example 475 step D (0.2 g, 0.46 mmol) in  $\text{CH}_2\text{Cl}_2$  (5 mL) under nitrogen at room temperature, was added Compound (772) from Preparative Example 63, Step D (0.19 g, 0.55 mmol), bezotriazolyl-N-oxy-tris-(dimethylamino)phosphoniumhexafluorophosphate (0.25 g, 0.55 mmol) and  $\text{Et}_3\text{N}$  (0.3 mL, 1.85 mmol). The resulting solution was stirred at room temperature overnight and concentrated to dryness, followed by extraction with  $\text{CH}_2\text{Cl}_2$ -10% citric acid. The combined organic layer was then washed with sat.  $\text{NaHCO}_3$ , brine, dried over  $\text{MgSO}_4$ , filtered, concentrated to dryness and purified by column chromatography on silica gel, eluting with 3%  $\text{MeOH-NH}_3/\text{CH}_2\text{Cl}_2$  to give a white solid (773) (0.013 g, 5% yield,  $M=566.2$ )

**EXAMPLE 479**  
**PREPARATION OF COMPOUNDS (774-777)**

$R = \text{N-BOC}$

(774) (enantiomer 1), ( $M+1 = 584$ )

(775) (enantiomer 2) ( $M+1 = 584$ )

$R = \text{H}$

(776) (enantiomer 1)

(777) (enantiomer 2)

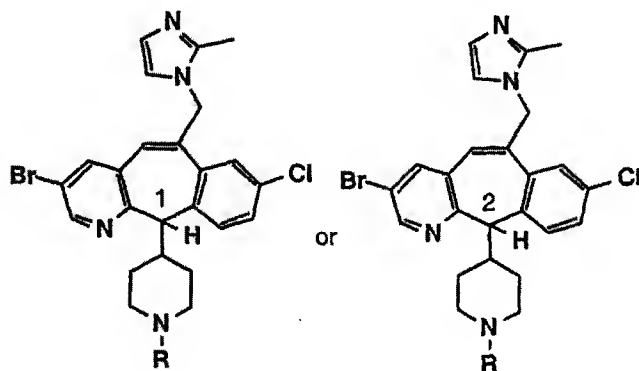

3-bromo-8-chloroazaketone (U.S. patent 5,977,128, Preparative Example 11, step A, (1999)) was reacted in essentially the same manner as in Preparative Example 23, and Example 91 to obtain the N-BOC derivatives (774) and (775). Compounds (774) and (775) were then reacted separately in essentially the

same manner as in Preparative Example 19, Step D to obtain the enantiomers (776) and (777).

**EXAMPLE 480**  
**PREPARATION OF COMPOUNDS (778) AND (779)**

5

In essentially the same manner as in Examples (420) and (421), Compounds (778) and (779) were prepared.

320

**EXAMPLE 481**  
**PREPARATION OF COMPOUNDS (780) AND (781)**

5 In essentially the same manner as in Example 70, Compounds (780) and (781) were prepared.

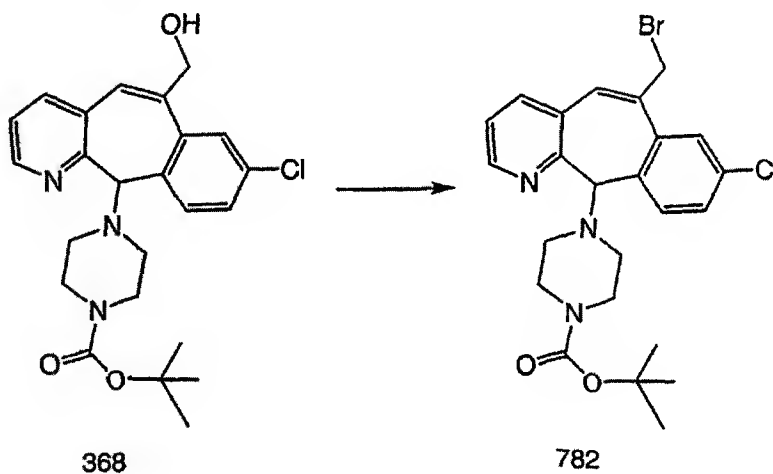

Compound #	R=	Enantiomer	FABMS(M+1)
780		1	562
781		2	562

10

**PREPARATIVE EXAMPLE 64**

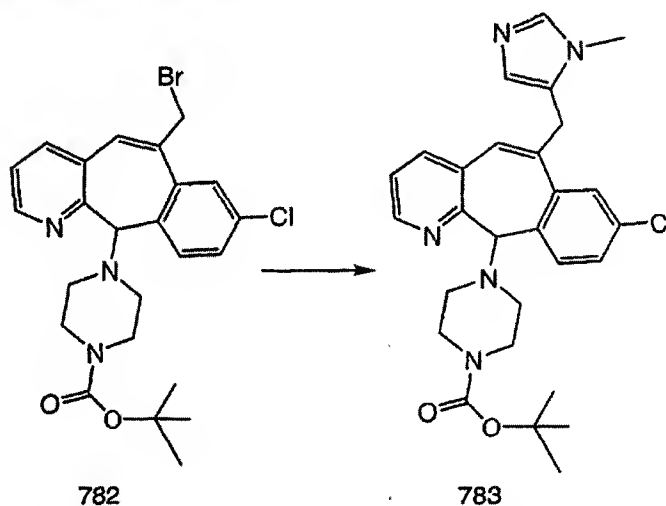

**STEP A      COMPOUND (782)**

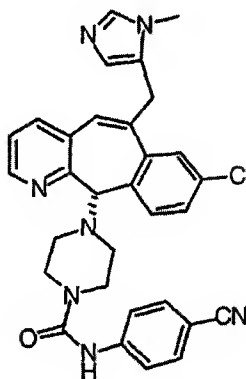

15

Compound (368) from Preparative Example 42, Step C (2.34g, 5.29 mmol) was dissolved in 25 mL  $\text{CH}_2\text{Cl}_2$  at 0 °C.  $\text{PPh}_3$  (1.66g, 6.34 mmol) and NBS (1.03g, 5.82 mmol) were added. After 90 mins, the reaction was diluted with  $\text{CH}_2\text{Cl}_2$  (20 mL), washed with sat.  $\text{NaHCO}_3$ , brine and dried with  $\text{MgSO}_4$ . The crude product was purified on a silica gel column (4:1 hexanes/EtOAc to 2:1) to yield 1.8 g of Compound (782) as a light yellow solid. MS  $M+1$  504.

**Step B                      Compound (783)**

5-Iodo-1N-methyl imidazole (455 mg, 2.18 mmol) was dissolved in 10 mL THF at room temperature. EtMgBr (2.4 mL, 1.0 M in THF) was added dropwise. After 30 mins, the reaction mixture was cooled to 0°C. 10 mL THF solution of CuCN (175 mg, 1.96 mmol) and LiCl (166 mg, 3.9 mmol) was then added. 10 mins later, Compound (782) from Step A above (989 mg, 1.96 mmol, in 10 mL THF) was added. The reaction was stirred overnight. Sat. NH<sub>4</sub>Cl solution was added to quench the reaction. The resulting emulsion was filtered through a sintered funnel and the filtrate was extracted with EtOAc twice. The organic layer was washed with NaHCO<sub>3</sub> solution and brine, dried over magnesium sulfate, filtered and evaporated *in vivo*. The resulting crude material was chromatographed on a silica gel column (using 1:1 hexanes/EtOAc then 10:1 CH<sub>2</sub>Cl<sub>2</sub>/MeOH) to obtain 330 mg of the title product. MS M+1 = 506 The enantiomers were separated on a chiral AD column.

EXAMPLE 482Preparation of compound (784)

784

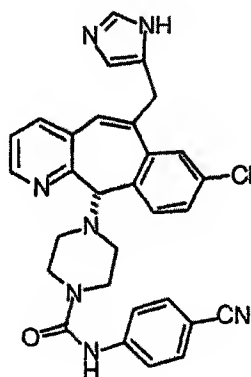

5

Compound (783) from Preparative Example 64, Step B above (40 mg) was dissolved in  $\text{CH}_2\text{Cl}_2$  (5 mL) at room temperature followed by addition of TFA (0.5 mL). After 2 hrs, the solvent was evaporated *in vivo* and coevaporated with  $\text{PhCH}_3$  twice. The crude mixture was then dissolved in  $\text{CH}_2\text{Cl}_2$  (4 mL) and  $\text{Et}_3\text{N}$  was added dropwise till the solution became basic by PH paper. 4-Cyanophenyl isocyanate (14 mg) was added. After 5 minutes, the reaction mixture was evaporated *in vivo* to dryness. The crude material was then purified using prep TLC plate (10:1  $\text{CH}_2\text{Cl}_2/\text{MeOH}$ ) to get 23 mg of Compound (784) as a white solid. MS  $M+1$  550.

10

EXAMPLE (483)Preparation of compound (785)

15

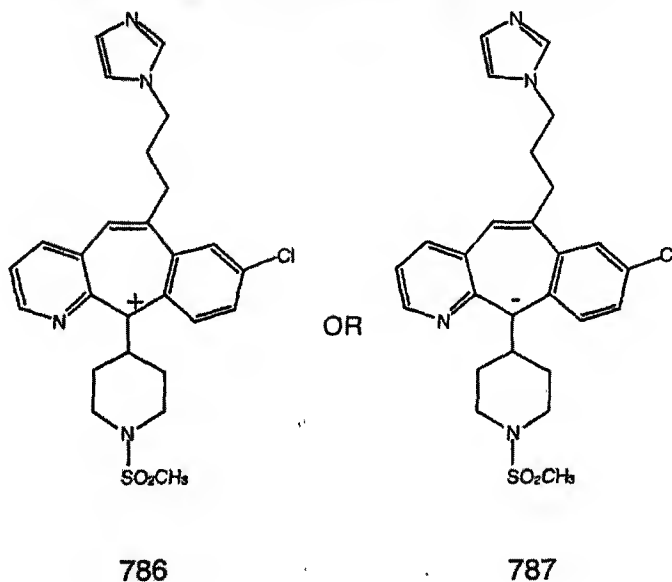

785

Compound (785) was prepared following essentially the same procedure as in Preparative Example 64 and Example 482, substituting 4-iodo-1-trityl imidazole for 5-iodo-1N-methyl imidazole.

#### EXAMPLE 484

5

##### Preparation of compounds (786) and (787)

10      Compound (786) and (787) were prepared following essentially the same procedure as in Preparative Example 7, substituting ketones (15) and (16) from Preparative Example 2, Step D for ketones (9) and (10).

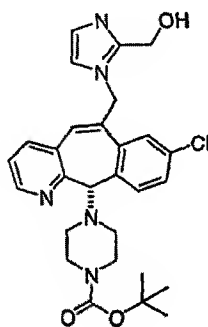

Compound (786)  $MH^+ = 497$ ;  $[\alpha]_D^{20} = +15.3$ ;

Compound (787)  $MH^+ = 497$ ;  $[\alpha]_D^{20} = -13.4$ .

15

#### EXAMPLE 485

##### Preparation of compound (788)

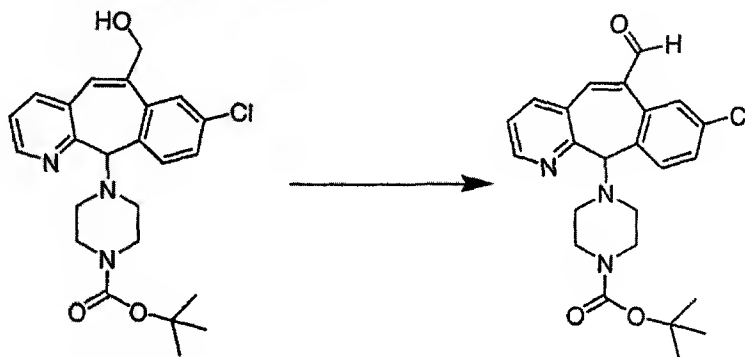

Following essentially the same procedure as in Preparative Example 33, Steps E-H, except substituting compound (365) for Compound (281) and 2-hydroxymethyl imidazole for 1-methyl imidazole, compound (788) was prepared.

5 (788):  $^1\text{H-NMR}$  (Varian 400 MHz,  $\text{CDCl}_3$ , ppm):  $\delta=8.5$  (1H, dd), 7.34 (1H, s), 7.59 (1H, d), 7.4 (2H, m), 7.25 (2H, m), 7.04 (1H, s), 6.9 (1H, s), 6.6 (1H, s), 5.37 (2H, dd), 4.8 (2H, dd), 4.6 (1H, s), 3.2 (5H, br s), 2.0 (2H, br s), 1.9 (2H, br s), 1.4 (9H, s).

#### PREPARATIVE EXAMPLE 65

##### STEP A COMPOUND (789)

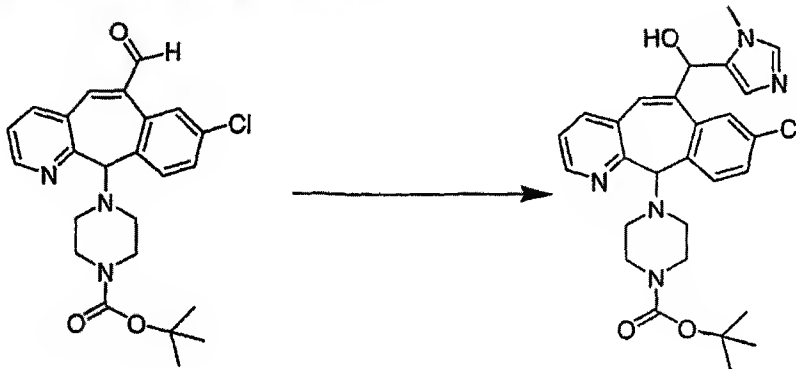

10

To a solution of the alcohol (3.8 g, 8.6 mmol) in  $\text{CH}_2\text{Cl}_2$  (100 mL) under nitrogen was added  $\text{MnO}_2$  (40 g). The resulting solution was stirred at room temperature for 4 days. The mixture was then filtered through a pad of Celite with ethyl acetate (500 mL) as the eluant. The filtrate was concentrated to yield a yellow liquid (4.0 g, MH+

15 440.1). The crude material was separated into its pure isomers by HPLC, using a chiral AD column eluting with 20% IPA/80% Hexanes/0.2% DEA (isomer 1, 810 mg; isomer 2, 806 mg).

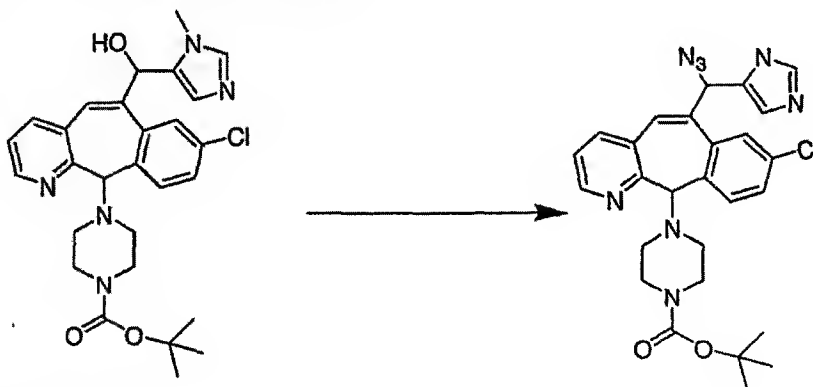

##### STEP B COMPOUND (790)

20

To a solution of imidazole Grignard prepared from 5-iodo-1N-methyl imidazole (312 mg, 1.5 mmol, preparative example 64 step B) was added a solution of aldehyde (791) (380 mg, 0.86 mmol) in  $\text{CH}_2\text{Cl}_2$  (10 mL). After stirring at room temperature overnight, the mixture was heated to 40 °C for one hour. After cooling to room temperature again, saturated  $\text{NH}_4\text{Cl}$  solution was added to quench the reaction. The organic layer was dried and the solvent was evaporated. The residue was then purified by silica gel column (from 2% to 10% MeOH in  $\text{CH}_2\text{Cl}_2$ ) to give the product as a brown oil (207 mg, 46% yield,  $\text{MH}^+ = 522.1$ ). The diastereomers were then separated by HPLC, using a chiral AD column eluting with 20% IPA/80%Hexanes/0.2%DEA.

STEP C      COMPOUND (791)

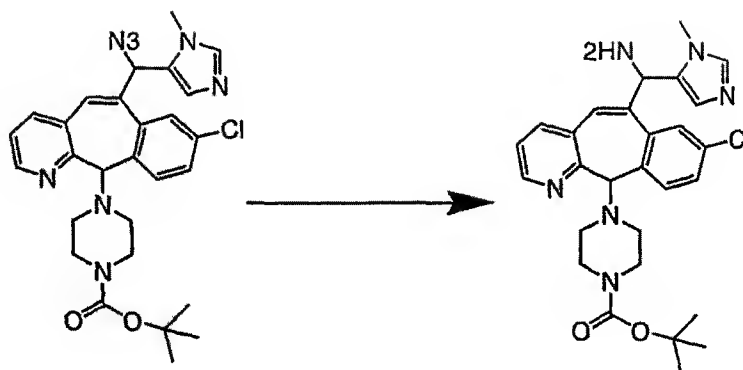

To a THF solution (5 mL) of (790) (200 mg, 0.38 mmol) at room temperature was added DPPA (210 mg, 0.76 mmol) followed by addition of DBU (120 mg, 0.76 mmol). The mixture was stirred overnight and then diluted with ethyl acetate (30 mL), washed with water twice and brine once. The organic layer was dried and the solvent was evaporated. The residue was purified by prep TLC (10% MeOH in  $\text{CH}_2\text{Cl}_2$  with 0.2 %  $\text{NH}_3$ ) to give product (791) (102.8 mg,  $\text{MH}^+ = 547.1$ ). Starting material (790) (58 mg) was also recovered. The diastereomers of (791) were separated on a chiral AD column.

EXAMPLE 486

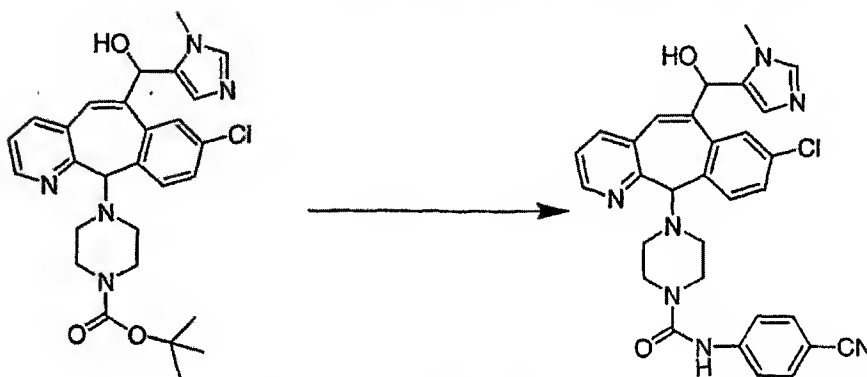

PREPARATION OF COMPOUND (792)

326

To a wet THF solution (3 mL) of (791) (48 mg, 0.09 mmol) was added  $\text{PPh}_3$  (32 mg, 0.12 mmol) at room temperature. After stirring overnight, the reaction mixture was concentrated and the residue was purified with prep TLC (10% MeOH in  $\text{CH}_2\text{Cl}_2$  with 0.2 %  $\text{NH}_3$ ) to give a white solid (24.3 mg). The white solid was then redissolved in THF/ $\text{H}_2\text{O}$  (5mL/0.5 ml) and the mixture was heated to reflux overnight. The reaction mixture was then partitioned between ethyl acetate and water. The organic layer was dried and concentrated. The residue was purified with prep TLC (5% MeOH in  $\text{CH}_2\text{Cl}_2$  with 0.2 %  $\text{NH}_3$ ) to yield a yellow solid (792) (8.3 mg,  $\text{MH}^+$  521.1).

10

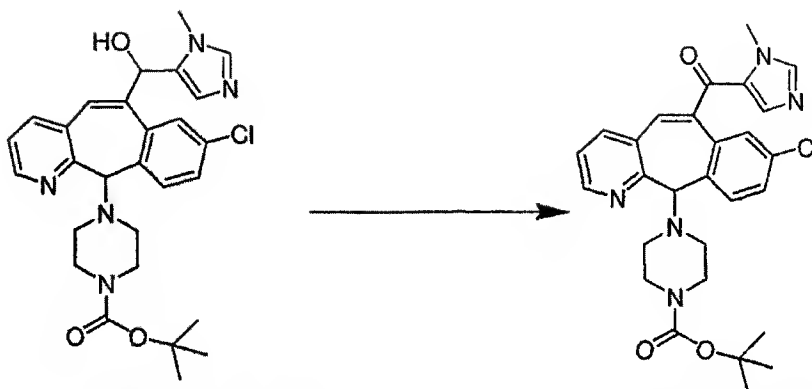

EXAMPLE 487PREPARATION OF COMPOUND (793)

Compound (790) was converted to compound (793) following the essentially the same procedure as described in EXAMPLE 482.  $\text{MS } \text{M}^{+1}$  566.1.

15

EXAMPLE 488PREPARATION OF COMPOUND (794)

327

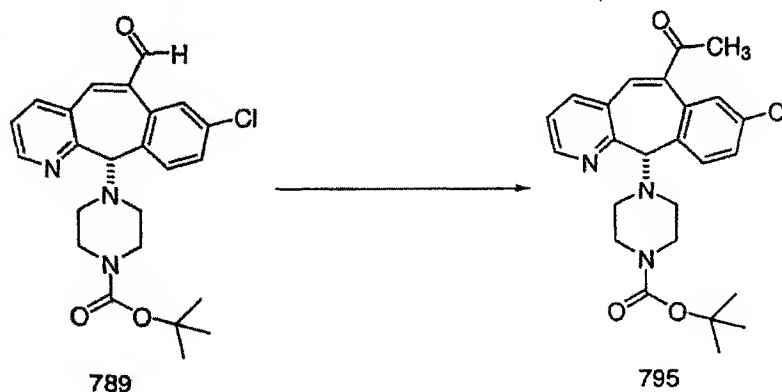

Compound (790) was converted to compound (794) following essentially the same procedure as described in PREPARATIVE EXAMPLE 65, Step A. MS  $M^{+1}$  520.1.

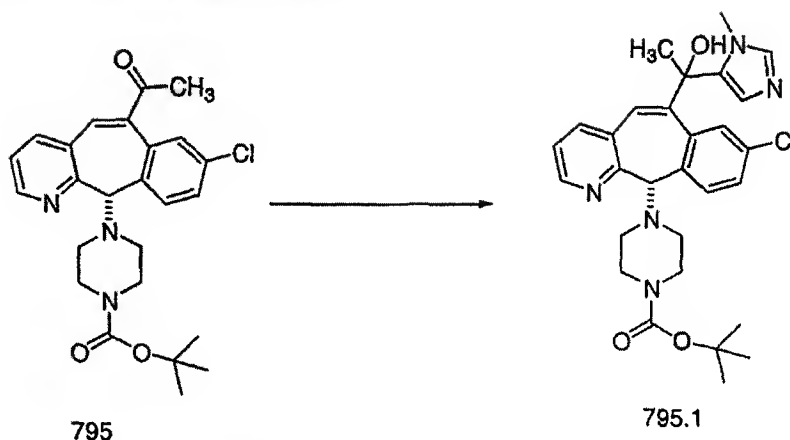

5

#### EXAMPLE 489

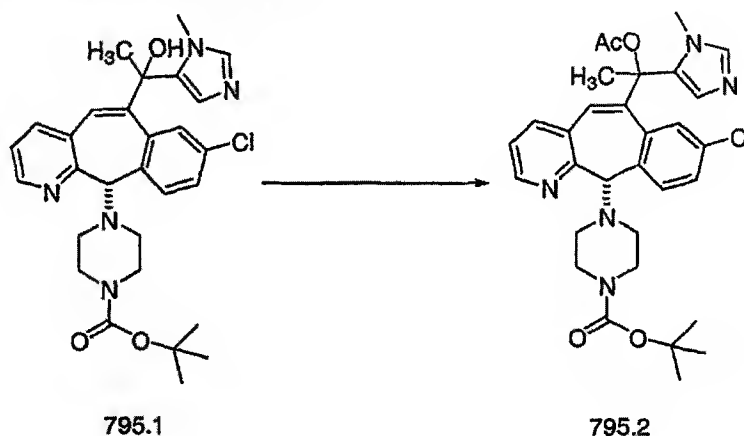

##### Step A. Compound (795)

- Aldehyde (789) from Preparative Example 65, Step A (150 mg, 0.34 mmol) was dissolved in THF (6 mL). To this solution was added MeMgBr (0.3 mL, 3.0M in  $\text{Et}_2\text{O}$ ) dropwise. After stirring at room temperature for 4 hrs, the reaction mixture was quenched with sat.  $\text{NH}_4\text{Cl}$  solution and extracted with ethyl acetate. The organic layer was washed with brine, dried and concentrated to give a yellow solid (150 mg). The crude product was then dissolved in  $\text{CH}_2\text{Cl}_2$  (5 mL). To this solution was added Dess-Martin Periodinane (210 mg) and a drop of water. After 1 hr, aqueous  $\text{Na}_2\text{S}_2\text{O}_3$  solution (4 mL, 10%) was added. The mixture was stirred for 10 min. and extracted with  $\text{CH}_2\text{Cl}_2$ . The organic layer was washed with  $\text{NaHCO}_3$ , dried and concentrated. The crude material was purified using prep TLC plates (5% methanol in  $\text{CH}_2\text{Cl}_2$ ) to yield the methyl ketone product (795) as a yellow solid (70 mg).

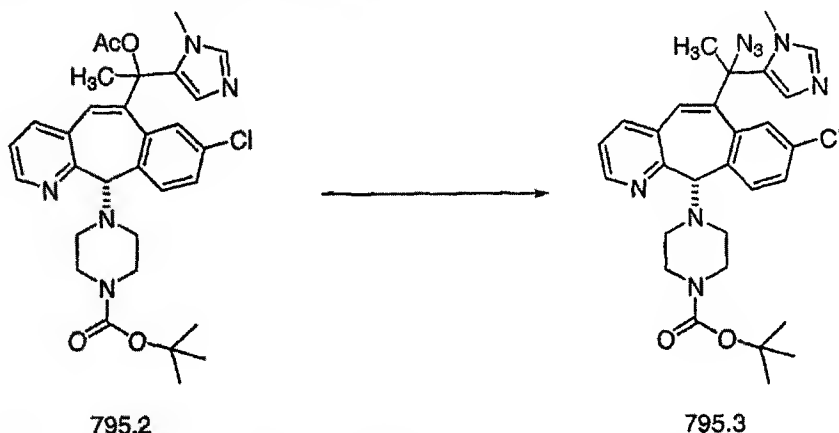

Step B      Compound (795.1)

- 5 To a solution of imidazole Grignard prepared from 5-iodo-1N-methyl imidazole (624 mg, 3 mmol, see preparative example 64 step B using  $\text{ClCH}_2\text{CH}_2\text{Cl}$  as solvent instead of THF) was added a  $\text{ClCH}_2\text{CH}_2\text{Cl}$  (6 mL) solution of methyl ketone (795) (272 mg, 0.6 mmol). The mixture was heated to 60 °C for 1.5 hours. After cooling to room temperature, saturated  $\text{NH}_4\text{Cl}$  solution was added to quench the reaction. The
- 10 organic layer was dried and then evaporated to dryness. The residue was then purified by silica gel column (from 2% to 10% MeOH in  $\text{CH}_2\text{Cl}_2$ ) to give the product (795.1) as a brown solid (63 mg, 10:1 diastereomeric selectivity,  $\text{MH}^+ = 536.1$ ). Major diastereomer: ( $\text{CDCl}_3$ , 300 MHz) 8.47 (d, 1H), 7.66 (d, 1H), 7.57 (s, 1H), 7.54 (s, 1H), 7.34 (d, 1H), 7.25-7.22 (m, 1H), 7.05 (s, 1H), 6.89 (s, 1H), 6.82 (s, 1H), 4.61 (s, 1H),
- 15 3.84 (s, 3H), 3.24 (br s, 4H), 2.24 (m, 2H), 2.02-2.00 (m, 2H), 1.88 (s, 3H), 1.41 (s, 9H).

Step C      Compound (795.2)

Compound (795.1) can be converted to acetate compound (795.2) by reacting it with 1 equivalent of acetic anhydride and 2 equivalents of pyridine.

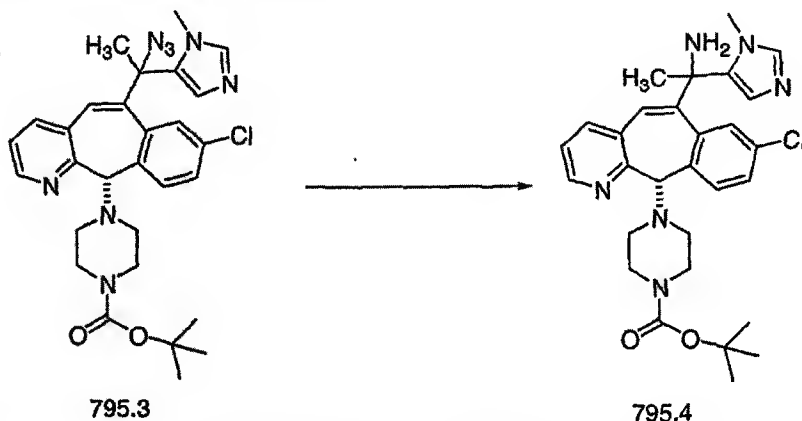

**Step D**                      **Compound (795.3)**

5 Compound (795.2) can be converted to compound (795.3) by reacting it with 1.5 equivalents of  $\text{NaN}_3$ , 15-crown-5, and a catalytic amount of  $\text{Pd}(\text{dba})_2/\text{PPh}_3$ .

Alternatively, (795.3) can be synthesized by treating (795.1) with  $\text{NaN}_3$ , TFA followed by  $(\text{Boc})_2\text{O}$ , and triethyl amine.

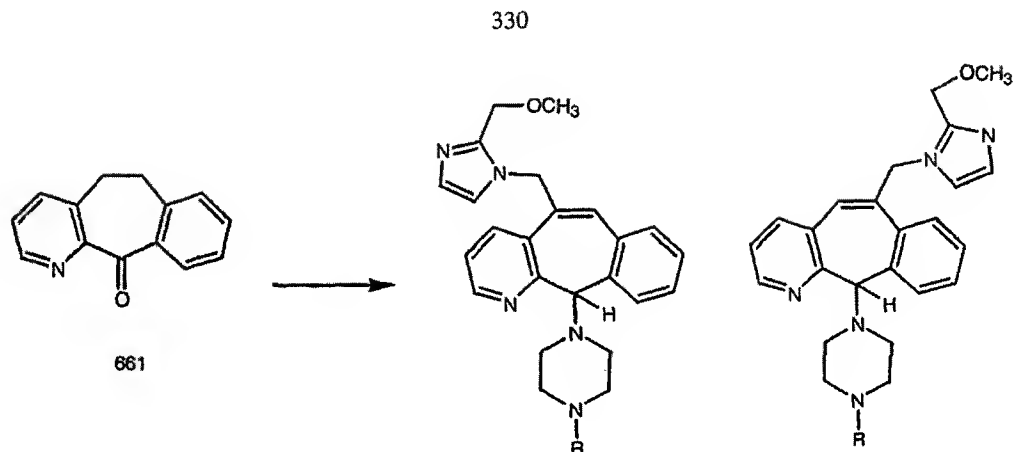

10            Step E            Compound 795.4

Compound (795.4) can be prepared by reacting (795.3) with  $\text{P}(\text{CH}_3)_3/\text{H}_2\text{O}$ .

### PREPARATIVE EXAMPLE 66

15 Compounds (796) – (803)

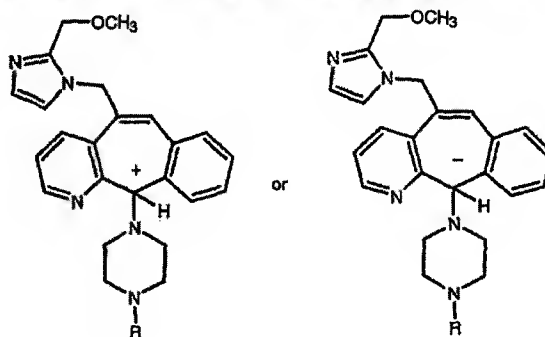

R = BOC  
(796) (+ enantiomer, A)      (797) (+ enantiomer, A)  
(798) (- enantiomer, B)      (799) (- enantiomer, B)

R = H  
(800) (+ enantiomer, A)      (801) (+ enantiomer, A)  
(802) (- enantiomer, B)      (803) (- enantiomer, B)

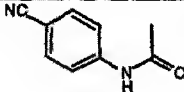

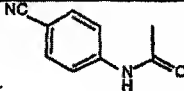

Compound 661 was reacted in essentially the same manner as in Preparative Example 23 and then Example 91 to obtain the N-BOC derivatives (796), (797), (798), and (799). Compounds (796), (797), (798), and (799) were then further reacted separately in essentially the same manner as in PREPARATIVE EXAMPLE 19, Step D to obtain the enantiomers (800), (801) (+ enantiomers, isomer A) and (802), (803) (- enantiomers, isomer B). The C5 and C-6 vinyl bromide intermediates were separated by silica gel chromatography using hexane:ethyl acetate (80:20) as described in PREPARATIVE EXAMPLE 23, Step B.

#### EXAMPLE 490-491

#### PREPARATION OF COMPOUNDS (804) AND (805)

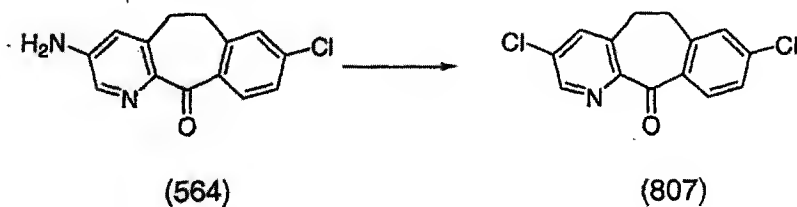

The appropriate (+) enantiomer (800) or (-) enantiomer (802) from Preparative Example 66 above, was taken up in  $\text{CH}_2\text{Cl}_2$  treated with the corresponding isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

Example #	R	Enantiomer	Comp #	Phys. Data.
490		+	(804)	Mp = 160-165°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = +84° (0.84 mg/ 1 mL MeOH) MH+ = 546
491		-	(805)	Mp = 158-163°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = -91.6° (0.84 mg/ 1 mL MeOH) MH+ = 546

### PREPARATIVE EXAMPLE 67

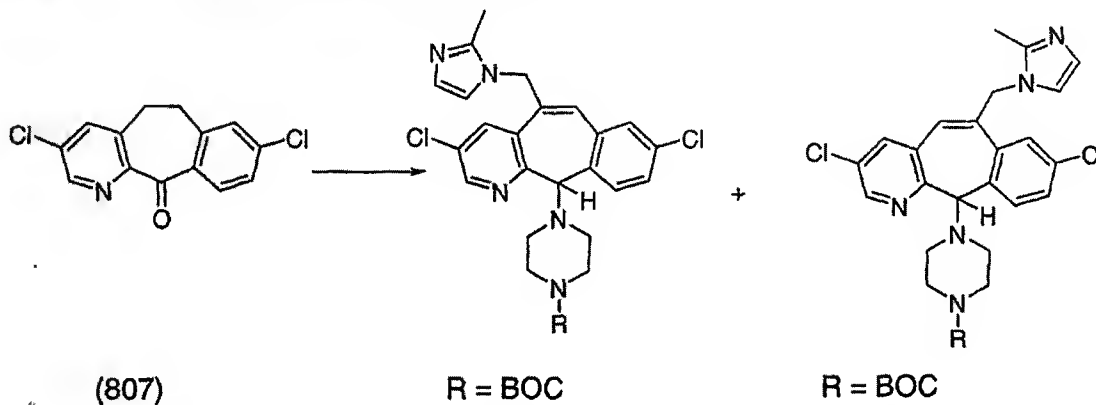

#### Step A COMPOUND (807)

15.4 g (115 mmole) of  $\text{CuCl}_2$  and 17 mL (144 mmol) of t-butyl nitrite was added to 400 mL of dry  $\text{CH}_3\text{CN}$ . The reaction mixture was cooled to 0° C and 25 g of ketone (564) was added. The reaction was warmed to room temperature and stirred for two days. The mixture was concentrated under vacuum. Then 1N HCl was added to the residue until the pH was neutral, then  $\text{NH}_4\text{OH}$  was added until the pH was basic. After extraction with ethyl acetate, the organic layer was dried over  $\text{MgSO}_4$  and concentrated under vacuum to give compound (807). Alternatively, the corresponding

alcohol of 564 can be reacted as above followed by oxidation with  $\text{MnO}_2$  in  $\text{CH}_2\text{Cl}_2$  to give compound (807).

5 Step B COMPOUNDS (808) – (815)

(808) (enantiomer 1)

(809) (enantiomer 1)

(810) (enantiomer 2)

(811) (enantiomer 2)

R = H

R = H

(812) (enantiomer 1)

(813) (enantiomer 1)

(814) (enantiomer 2)

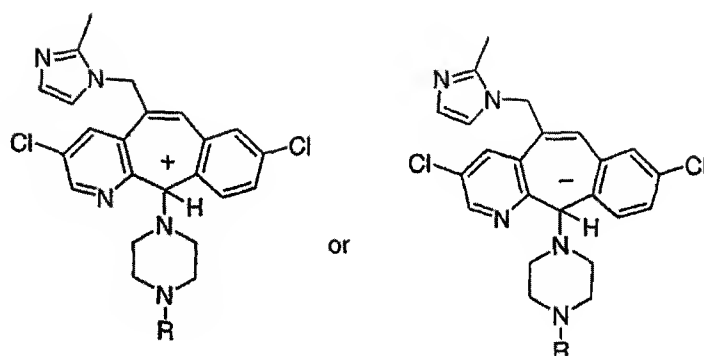

(815) (enantiomer 2)

Compound (807) from step B above was reacted in essentially the same manner as in Preparative Example 23, and then Example 91 to obtain the N-BOC derivatives (808), (809), (810) and (811). These were then reacted separately in essentially the same manner as in Preparative Example 19, Step D to obtain the enantiomers (812) and (814), as well as enantiomers (813) and (815). The C5 and C-6 vinyl bromide intermediates were separated by silica gel chromatography using hexane:ethyl acetate as described in Preparative Example 23, Step B.

EXAMPLE 493

PREPARATION OF COMPOUNDS (816) AND (817)

333

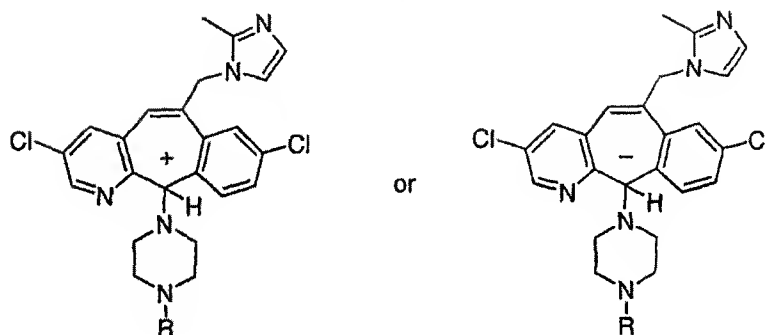

5 The appropriate enantiomer (812) (enantiomer 1) or (814) (enantiomer 2) from Preparative Example 67, Step B above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

10

Starting Cmp. #	R	Enantiomer	Comp #	Phys. Data.
(812)		+	816	Mp = 175 - 181°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = +94.2° (1 mg/ 1 mL MeOH)
(814)		-	(817)	Mp = 182 - 186°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = -120.3° (1 mg/ 1 mL MeOH)

**EXAMPLE 494****PREPARATION OF COMPOUNDS (818) AND (819)**

334

5 The appropriate enantiomer (813) (enantiomer 1) or (815) (enantiomer 2) from Preparative Example 67, Step B above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

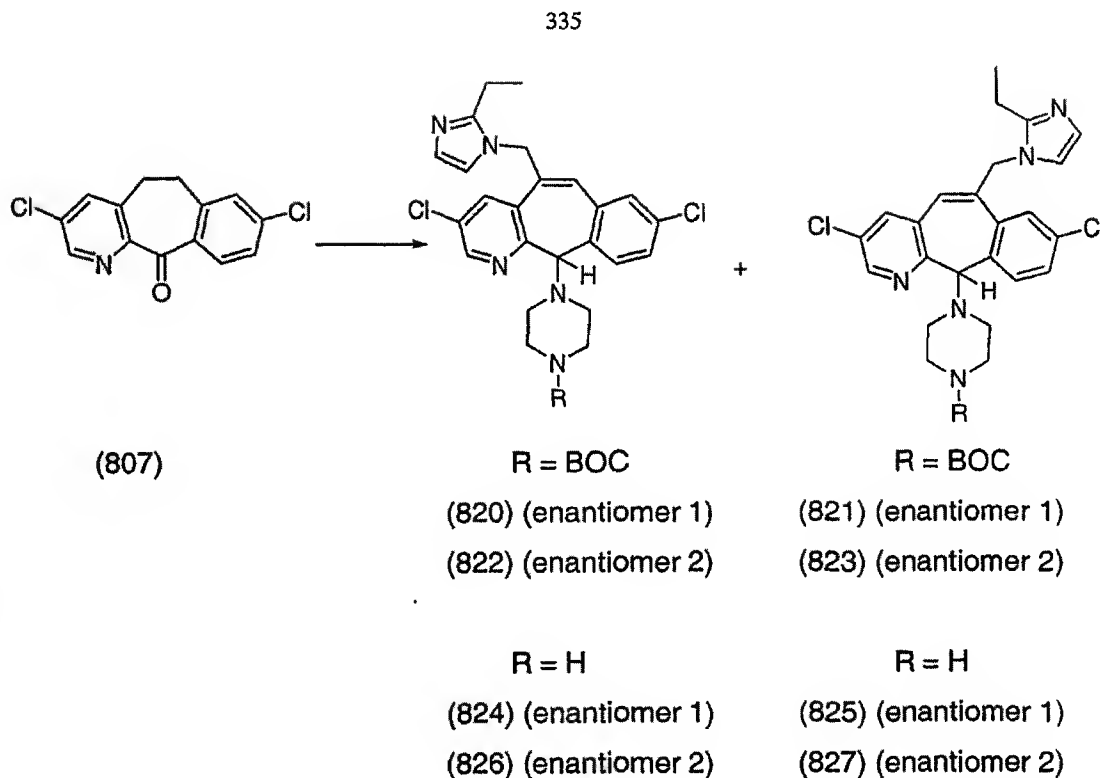

10

Starting Cmp #	R	Enantiomer	Cmp #	Phys. Data.
(813)		+	(818)	Mp = 176 - 181°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = +46.3° (0.79 mg/ 1 mL MeOH) MH <sup>+</sup> = 584
(815)		-	(819)	Mp = 174 - 180°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = -43.3° (0.94 mg/ 1 mL MeOH) MH <sup>+</sup> = 584

### PREPARATIVE EXAMPLE 68

#### COMPOUNDS (820) – (827)

15

5

10 Compound (807) from Preparative Example 67, Step A above was reacted in essentially the same manner as in Preparative Example 23, and then Example 91, substituting 2-ethylimidazole for 2-methylimidazole, to obtain the N-BOC derivatives (820), (821), (822) and (823). These were then reacted separately in essentially the same manner as in Preparative Example 19, Step D to obtain the enantiomers (824)

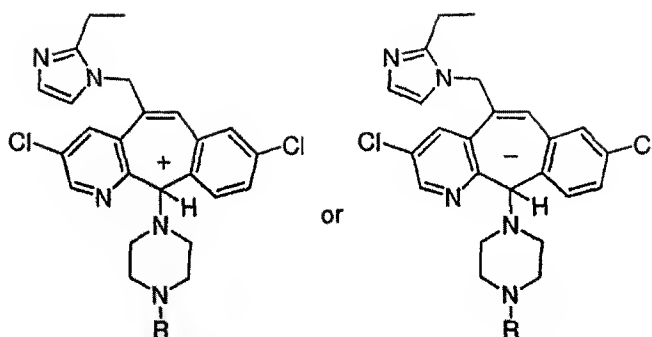

15 and (826), as well as enantiomers (825) and (827). The C5 and C-6 vinyl bromide intermediates were separated by silica gel chromatography using hexane:ethyl acetate as described in Preparative Example 23, Step B.

20

### EXAMPLE 495

#### PREPARATION OF COMPOUNDS (828) AND (829)

336

- The appropriate enantiomer (824) (enantiomer 1) or (826) (enantiomer 2) from
- 5 Preparative Example 68 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

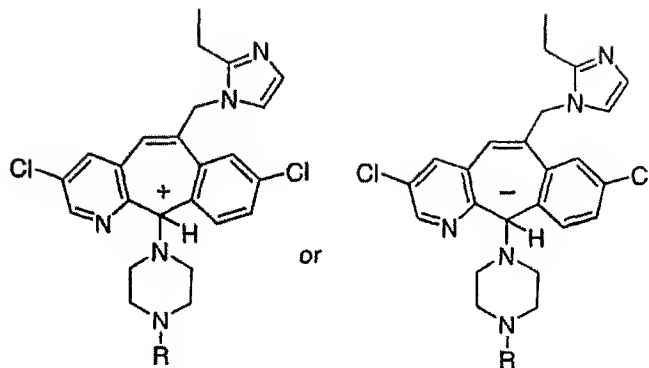

10

Starting Cmp #	R	Enantiomer	Comp #	Phys. Data.
(824)		+	(828)	Mp = 176 - 182°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = +84.5° (1.3 mg/ 1 mL MeOH) MH <sup>+</sup> = 598
(826)		-	(829)	Mp = 175 - 182°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = -88.8° (1.14 mg/ 1 mL MeOH) MH <sup>+</sup> = 598

EXAMPLE 496PREPARATION OF COMPOUNDS (830) AND (831)

15

337

The appropriate enantiomer (825) (enantiomer 1) or (827) (enantiomer 2) from Preparative Example 68 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was  
 5 purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

Starting Cmp #	R	Enantiomer	Comp #	Phys. Data.
(825)		+	(830)	Mp = 170 - 174°C [ $\alpha$ ] <sub>D</sub> <sup>25</sup> = +39.1° (0.81 mg/ 1 mL MeOH) MH <sup>+</sup> = 598

(834) (enantiomer, A)

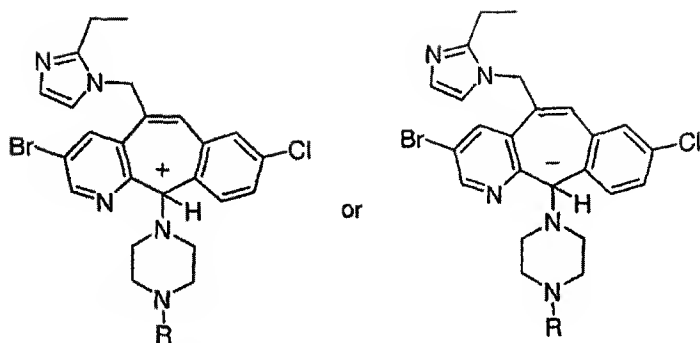

(835) (enantiomer, B)

- 10 3-Bromo-8-chloroazaketone (U.S. Patent 5,977,128, Preparative Example 11, Step A, (1999)) was reacted in essentially the same manner as in Preparative Example 23, and then Example 91, substituting 2-ethylimidazole for 2-methylimidazole, to obtain the N-BOC derivatives (832) and (833). These were then reacted separately in essentially the same manner as in Preparative Example 19,
- 15 Step D to obtain the enantiomers (834) and (835).

**EXAMPLE 497****PREPARATION OF COMPOUNDS (836) AND (837)**

20

339

The appropriate enantiomer (834) (enantiomer 1) or (835) (enantiomer 2) from Preparative Example 69 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was

5 purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

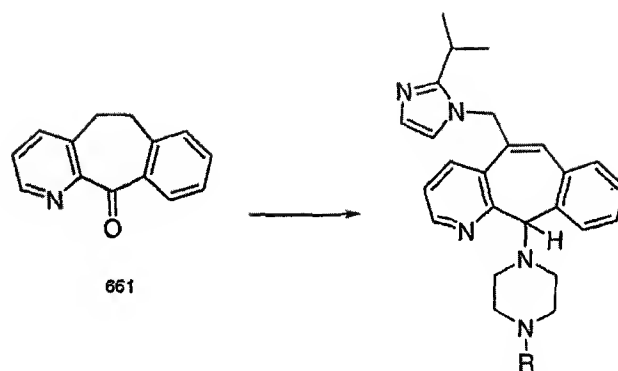

Starting Cmp #	R	Enantiomer	Comp #	Phys. Data.
(834)		A	(836)	Mp = 172 - 179°C (d) MH+ = 643
(835)		B	(837)	Mp = 171.9 - 178.3°C MH+ = 643

3-Methoxy-8-chloroazaketone (U.S. patent 5,977,128 (1999), Example 2, step D) was reacted in the same manner as in Preparative Example 23, and Example 91 to obtain the N-BOC derivatives (844) and (845). These compounds were then reacted separately in essentially the same manner as in Preparative Example 19, Step D to obtain the enantiomers (846) (A) and (847) (B).

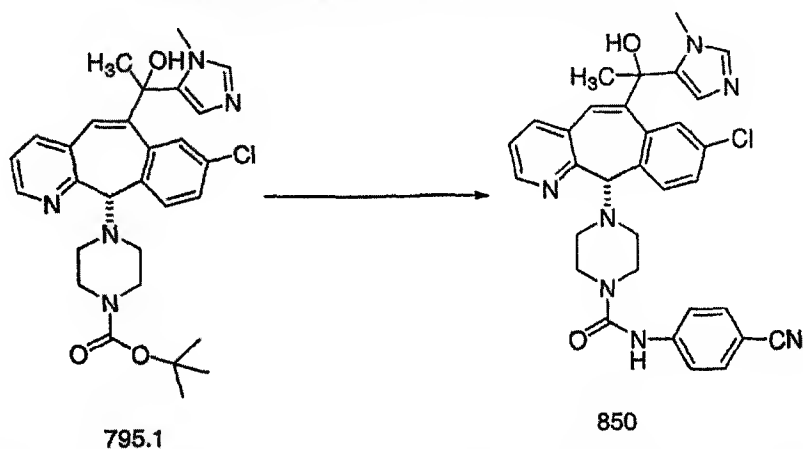

**EXAMPLE 499****PREPARATION OF COMPOUNDS (848) AND (849)**

The appropriate enantiomer (846) (enantiomer A) or (847) (enantiomer B) from Preparative Example 71 above, was taken up in  $\text{CH}_2\text{Cl}_2$ , treated with 4-cyanophenyl isocyanate and stirred at room temperature over night. The crude product was

5 purified directly by silica gel preparative thin layer chromatography or silica gel column chromatography to afford the following compounds in the table below:

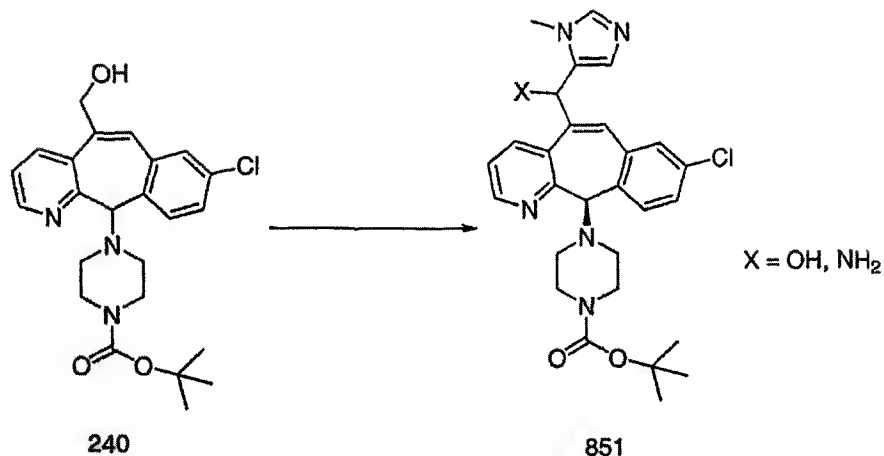

Starting Cmp #	R	Enantiomer	Comp #	Phys. Data.
(846)		A	(848)	Mp = 174.2 – 189.3°C (d)  MH+ = 580
(847)		B	(849)	Mp = 174.4 – 189.8°C  MH+ = 580

10

**EXAMPLE 500****PREPARATION OF COMPOUND (850)**

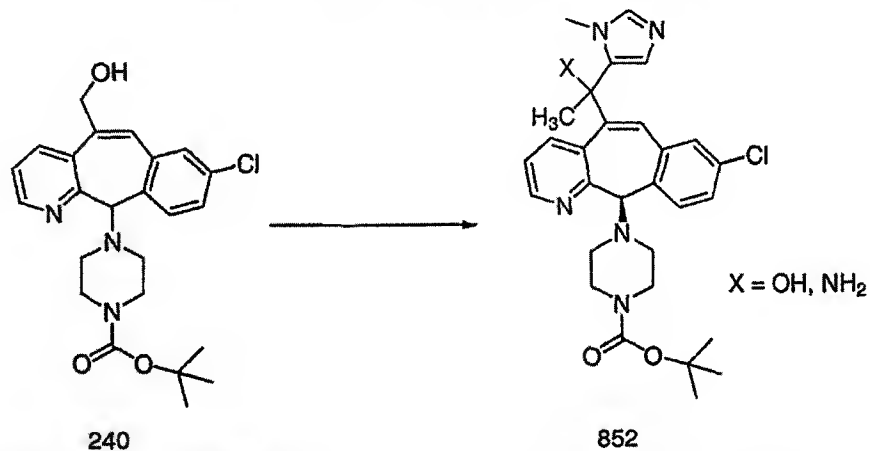

15

Compound (850) can be prepared by following essentially the same procedure as described in Example 482.

EXAMPLE 501PREPARATION OF COMPOUND (851)

5

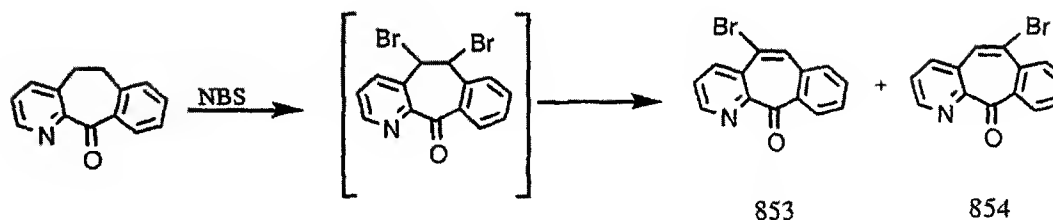

Starting with compound (240) from Preparative Example 23, Step H, compound (851) can be prepared following essentially the same procedure as described in Preparative Example 65, Steps A and B.

EXAMPLE 502PREPARATION OF COMPOUND (852)

10

Starting with compound (240) from Preparative Example 23, Step H, compound (852) can be prepared following essentially the same procedures as described in Preparative Example 65, Step A and Example 489, Steps A-E.

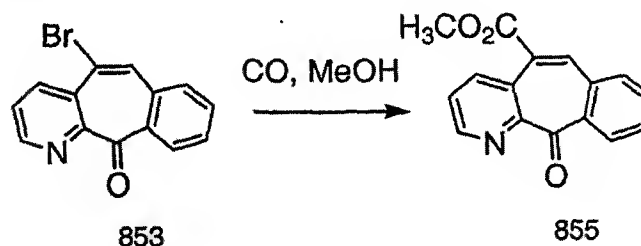

15

PREPARATIVE EXAMPLE 72Step A. Preparation of Compounds (853) and (854)

5

The starting tricyclic keto compound (disclosed in US Pat. No. 5,151,423) (56.5 g; 270 mmol) was combined with NBS ( 105 g; 590 mmol) and benzoyl peroxide ( 0.92 g ) in  $\text{CCl}_4$ . The reaction was heated at 80 °C for 5 hr. The mixture was cooled and the resulting precipitate was filtered and treated with DBU ( 25.59 ml) in THF (300mL).

10 The resulting solution was stirred at room temperature for 24 hrs, then evaporated, followed by extraction with  $\text{CH}_2\text{Cl}_2 - \text{H}_2\text{O}$  . The organic layer was dried over  $\text{MgSO}_4$ , filtered and evaporated to dryness to give a mixture of two compounds which were separated on a flash silica gel column eluting with Hexane-50% EtOAc to give the title compound (853)  $\delta_{\text{H}}$  ( $\text{CDCl}_3$ ) 8.8 (dd, 1H), 8.45 (dd, 1H), 7.99 (m, 1H), 7.92 (s, 1H),  
 15 7.59-7.64 (m, 3H), 7.23 (dd, 1H) and (854)  $\delta_{\text{H}}$  ( $\text{CDCl}_3$ ) 8.19 (dd, 1H), 7.99 (dd, 1H), 7.82 (dd, 1H), 7.25 –7.65(m, 4H), 7.22 (s, 1H)

Step B Preparation of Compound (855)

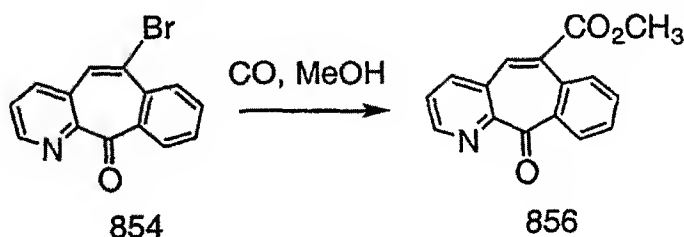

20

Compound (853) (25 g), triphenyl phosphine (13.75 g), and palladium chloride (1.5 g) were combine in MeOH (30 ml) and toluene (200 ml) . To the mixture was added DBU (18 ml) and the mixture was sealed in a parr bomb. The mixture was  
 25 stirred and subjected to 100 psi of CO at 80 °C for 5 hr. The reaction was diluted with

EtOAc and washed with water. The organic layer was dried over  $\text{MgSO}_4$ , filtered and purified by flash chromatography eluting with  $\text{CH}_2\text{Cl}_2$ - 10% EtOAc to give the title compound (855).  $\delta_{\text{H}}$  ( $\text{CDCl}_3$ ) 8.8 (dd, 1H), 8.40 (dd, 1H), 8.2 (s 1H), 8.04 (dd, 1H), 7.59-7.64 (m, 4H), 3.95 (s, 3H).

5

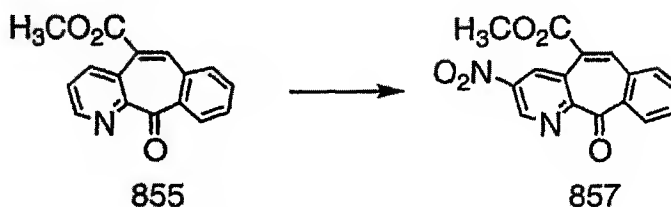

### Step C Preparation of Compound (856)

10 Reacting compound (854) in essentially the same manner as described in Step B above, gave the title compound (856) .  $\delta_H$  (CDCl<sub>3</sub>) 8.85 (dd, 1H), 7.85-8.0 (m, 2H), 7.8 (s, 1H), 7.25 – 7.31 (m, 4H)

### Step D Preparation of Compound (857)

15

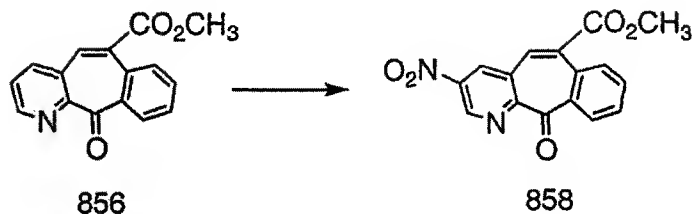

Compound (855) (19.5 g, 73.5 m mol) was dissolved in  $\text{CH}_2\text{Cl}_2$  ( 100 mL) and cooled to 0 °C . Tetrabutyl ammonium nitrate (31.36 g, 103 n mol) and trifluoro acetic anhydride ( 18.52 g, 88 m mol) were added and the mixture stirred at room temperature for 5 hrs. The reaction mixture was concentrated to dryness, followed by extraction with  $\text{CH}_2\text{Cl}_2$  – $\text{NaHCO}_3$  . The combine organic layer was dried over  $\text{MgSO}_4$  and concentrated to dryness and the residue was chromatographed on silica gel using  $\text{CH}_2\text{Cl}_2$  –EtOAc (25%) to give the title compound (857) (12.4 g),  $\delta_{\text{H}}$  ( $\text{CDCl}_3$ ) 9.45 (dd, 1H), 9.05 (dd, 1H), 8.28 (s 1H), 8.0 (dd, 1H), 7.65 (m, 3H), 3.98 (s, 3H).

25

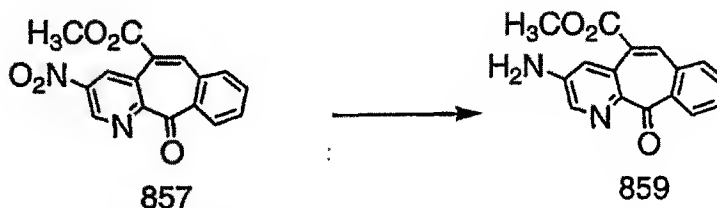

### Step E      Preparation of Compound (858)

347

5 Reacting compound (856) in essentially the same manner as described in Step D above, gave the title compound (858).  $MH^+ = 311$

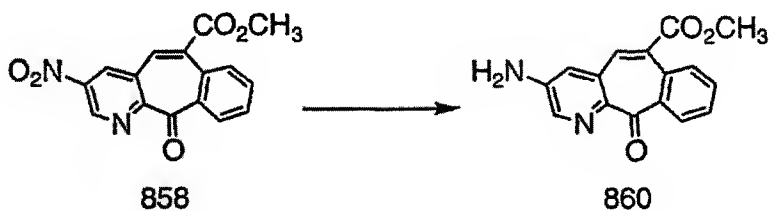

Step F Preparation of Compound (859)

10

Compound (857) (6 g, ) was balloon hydrogenated in MeOH (100 mL) over Raney-Ni (4.2 g) at room temperature overnight. The catalyst was filtered off and the filtrate was evaporated to dryness to give the title compound (859) (4.66 g)  $MH^+ = 281$

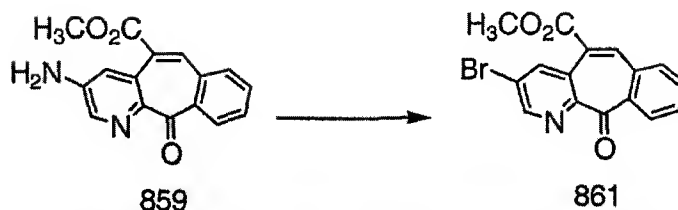

15 Step G Preparation of Compound (860)

20 Reacting compound (858) in essentially the same manner as described in Step F above, gave the title compound (860)  $MH^+ = 281$ .

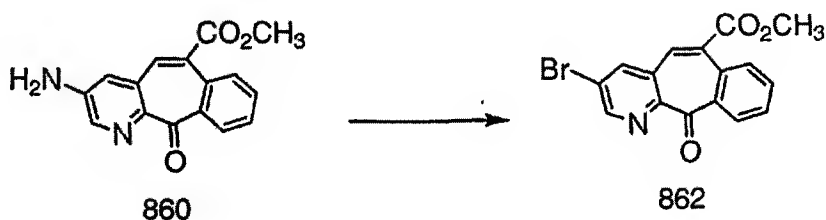

Step H Preparation of Compound (861)

348

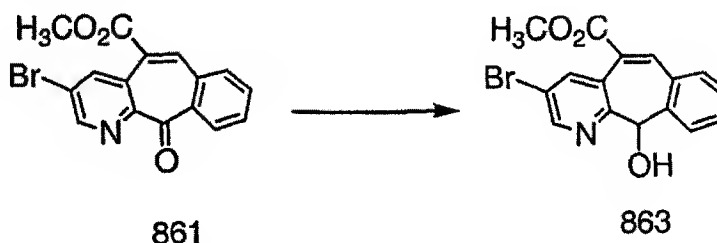

To a suspension of compound (859) (2.1 g) in 48% HBr, was added sodium nitrite (1.55 g) followed by bromine (2.11 mL) at 0 °C. The mixture was stirred at room temperature overnight. Concentrated NH<sub>4</sub>OH was then added dropwise until basic pH (to litmus paper). The reaction was extracted with CH<sub>2</sub>Cl<sub>2</sub>, washed with brine, dried over MgSO<sub>4</sub>, filtered and the solvent evaporated to give the title compound (861) (1.75 g) MH<sup>+</sup> = 345.

Step I . Preparation of Compound (862)

Reacting compound (861) in essentially the same manner as described in Step I above, gave the title compound (862) MH<sup>+</sup> = 345.

Step J Preparation of Compound (863)

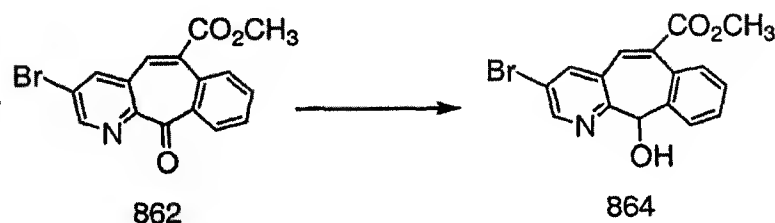

To a stirred solution of compound (861) (1.6 g, 4.64 mmole) in MeOH (30 mL) under nitrogen at 0 °C. was added NaBH<sub>4</sub> (0.3 g, 7.9 mmole). The resulting solution was stirred at room temperature for 24 hrs, then evaporated, followed by extraction

with  $\text{CH}_2\text{Cl}_2 - \text{H}_2\text{O}$ . The organic layer was dried over  $\text{MgSO}_4$ , filtered and evaporated to dryness to give the title compound (863) (1.58 g)  $\text{MH}^+ = 347$ .

Step K      Preparation of Compound (864)

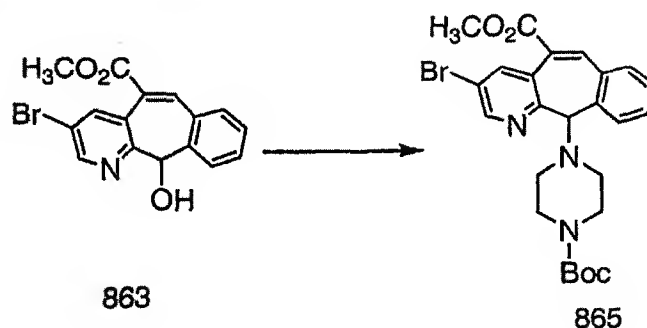

5

Reacting compound (862) in essentially the same manner as described in Step J above, gave the title compound (864).  $\text{MH}^+ = 347$

10

Step L      Preparation of Compound (865)

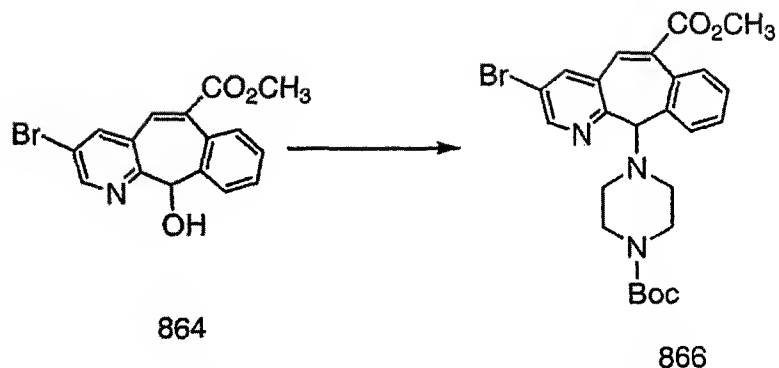

15      Compound 863 (1.57 g,) was stirred in thionyl chloride ( 10 mL) at room temperature for 4 hrs then evaporated to dryness. The resulting crude oil as taken up in acetonitrile ( 50 mL) and refluxed with N-Boc-piperazine (1.41 g) and triethyl amine ( 3.91g) overnight. The mixture was evaporated to dryness , followed by extraction with  $\text{CH}_2\text{Cl}_2 - \text{NaHCO}_3$ . The organic layer was dried over  $\text{MgSO}_4$ , filtered and

20      evaporated to dryness to give a brown gum which was purified by column chromatography on silica gel, eluting with Hexane –20% EtOAc to give the title compound (865) (0.69g); .  $\text{MH}^+ = 515$ .

Step M      Preparation of Compound (866)

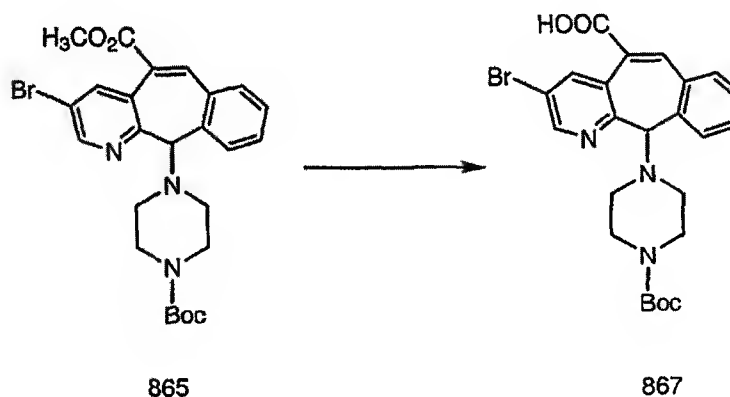

350

Reacting compound (864) in essentially the same manner as described in Step L above, gave the title compound (866)  $MH^+ = 515$ .

5

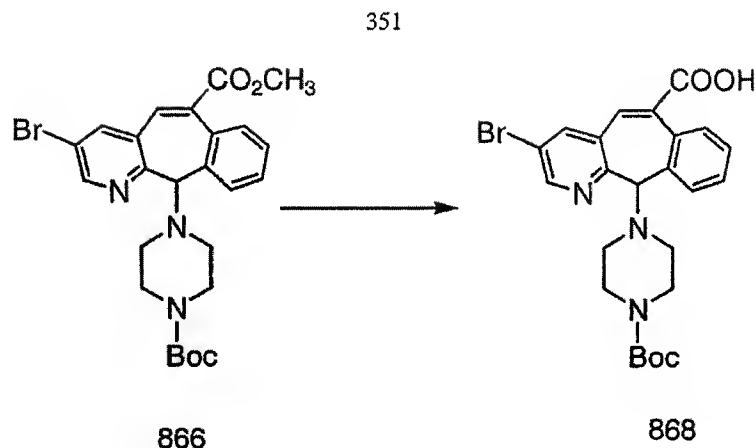

Step N      Preparation of Compound (867)

10      Compound (865) ( 0.65 g, 1.26 mmole) was refluxed with LiOH (0.45 g, , 18.79 mmole) in MeOH (15 mL) and water (1mL) for 2 hrs. 10% aq. Citric acid was added until pH = 3.5, followed by extraction with  $CH_2Cl_2$  -brine . The organic layer was dried over  $MgSO_4$ , filtered and evaporated to dryness to give a white solid (867) (0.60 g )  $MH^+ = 501$

15

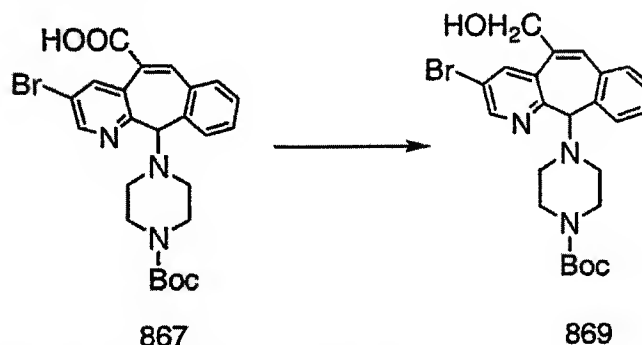

Step O      Preparation of Compound (868)

Reacting compound (866) in essentially the same manner as described in Step N above, gave the title compound (868).  $MH^+ = 501$

5

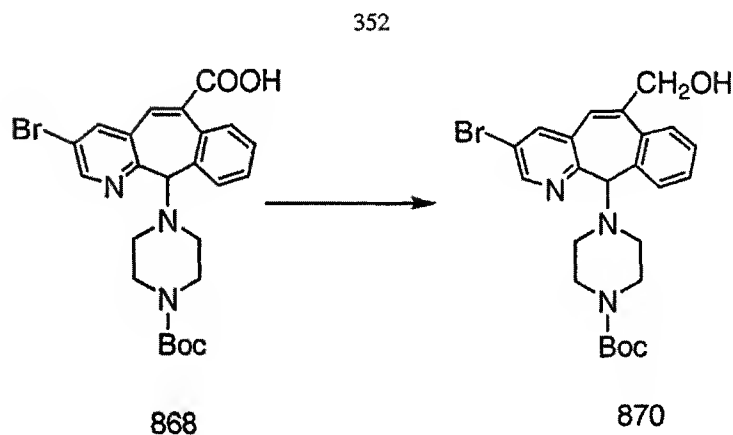

Step P      Preparation of Compound (869)

Compound (867) ( 0.60 g, 1.21 mmole) was stirred with carbonyl diimidazole ( 0.59 g, 3.63 mmole) in THF (15 mL) at at 40 °C overnight. The reaction mixture was cooled in an ice-bath then added  $NaBH_4$  ( 0.28 g, 7.31 mmole) and stirred at room temperature overnight. The mixture was evaporated to dryness, followed by extraction with  $CH_2Cl_2$  –water. The organic layer was dried over  $MgSO_4$ , filtered and evaporated to give a brown gum which was purified by column chromatography on silica gel, eluting with Hexane –50% EtOAc to give the title compound (869)(0.493g)  $MH^+ = 487$ .

15

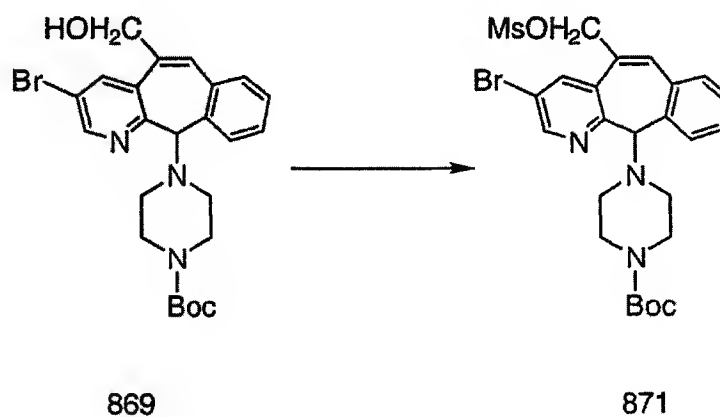

Step Q      Preparation of Compound (870)

Reacting compound (868) in essentially the same manner as described in Step P above, gave the title compound (870).  $MH^+ = 487$

5

Step R      Preparation of Compound (871)

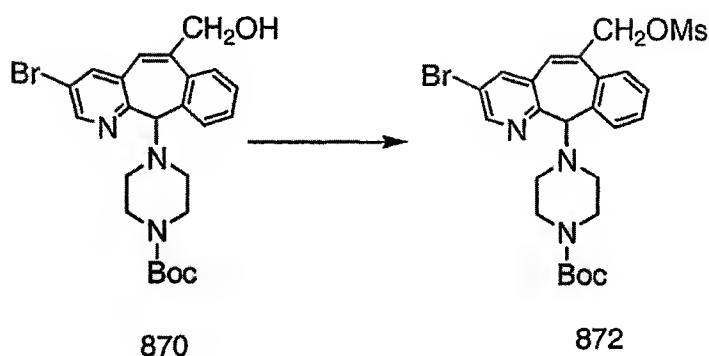

10

Compound (869) ( 0.038 g, 0.78 mmole) was stirred with methanesulfonylchloride ( 0.33 g, 1.296 mmole) and triethylamine (0.68 g, 6.72 mmole) in THF (10 mL) at room temperature overnight. The mixture was evaporated to dryness, followed by extraction with  $CH_2Cl_2$  -water. The organic layer was dried over  $MgSO_4$ , filtered and evaporated to dryness to give the title compound (871)(0.369g) .  $MH^+ = 565$

15

Step S      Preparation of Compound (872)

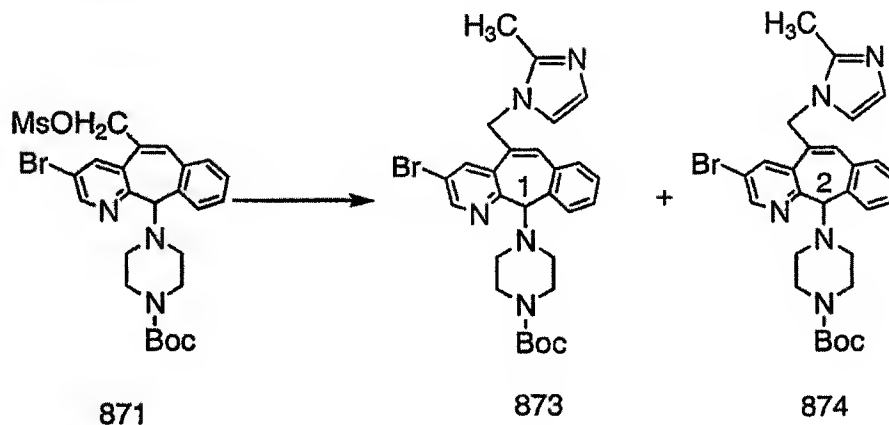

353

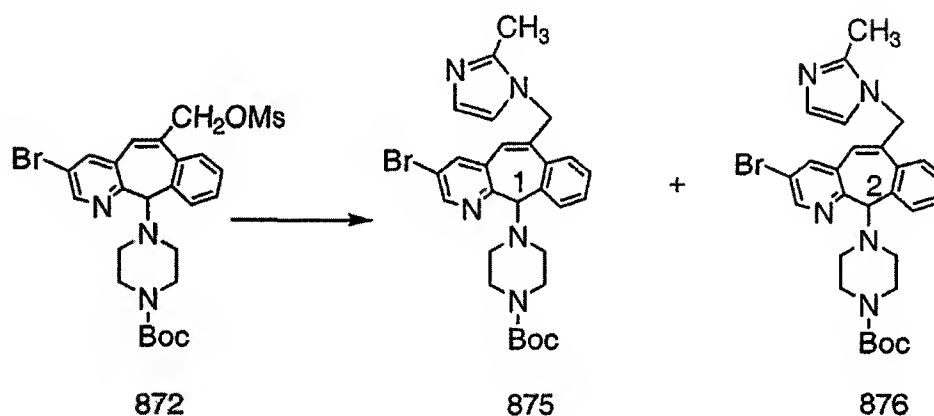

Reacting compound (870) in essentially the same manner as described in Step R above, gave the title compound (872).  $MH^+ = 565$

5

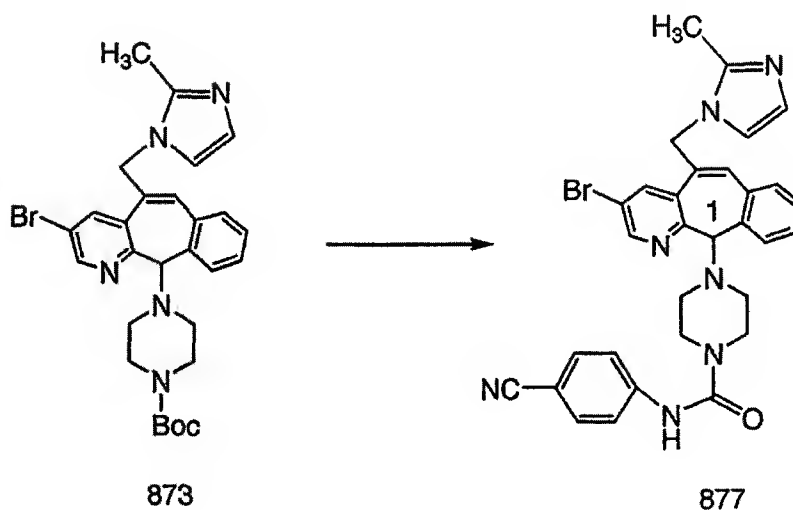

Step I      Preparation of Compounds (873) and (874)

Compound (871) (0.0369 g, 0.653 mmole) was stirred with 2-methylimidazole (0.188 g, 2.28 mmole) in DMF (5 mL) at room temperature overnight. The mixture was evaporated to dryness, followed by extraction with  $CH_2Cl_2$ -water. The organic layer was dried over  $MgSO_4$ , filtered, evaporated to dryness and then purified on silica-gel prep-plate chromatography, eluting with  $CH_2Cl_2$ - 5% (MeOH-10%  $NH_4OH$ ) to give the product as a mixture of isomers (1.126 g)  $MH^+ = 551$ . Separation of the product mixture by HPLC using a prep AD column, eluting with 20 % IPA/80%hexane/ 0.2%DEA (isocratic 60ml/min.) afforded pure isomer 1 (873) (0.06 g,  $MH^+ = 551$  and isomer 2 (874) (0.0061 g)  $MH^+ = 551$ .

Step U      Preparation of Compound (875) and (876)

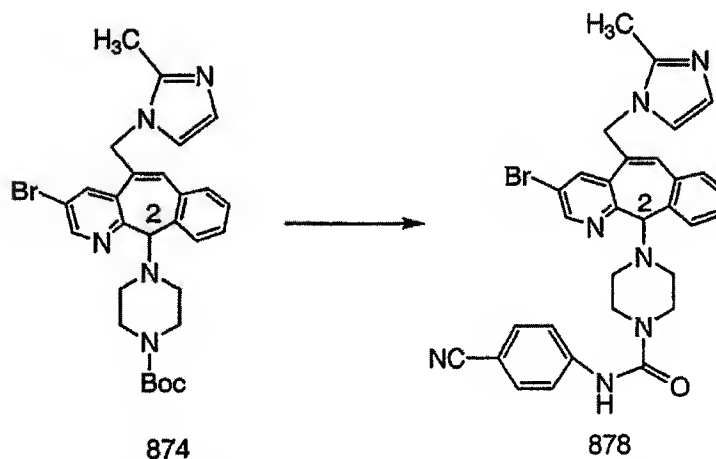

- 5      Reacting compound (872) in essentially the same manner as described in Step T above, gave the title compounds (875).  $MH^+ = 551$ , and (876)  $MH^+ = 551$ .

EXAMPLE 503Compound (877)

- 15      Compound (873) (0.043g, 0.078 mmole) was stirred with TFA (5 mL) in  $CH_2Cl_2$  (5 mL) for 4 hrs. at room temperature. The mixture was then evaporated to dryness.

To the residue was added p-cyanophenylisocyanate ( 0.0123 g, 0.086 mmole).and triethylamine (0.5 mL) in CH<sub>2</sub>Cl<sub>2</sub> (5 mL) and the mixture stirred at room temperature for 2 hrs. The mixture was evaporated to dryness, followed by extraction with CH<sub>2</sub>Cl<sub>2</sub> – brine. The organic layer was dried over MgSO<sub>4</sub>, filtered and evaporated to dryness to give a brown gum which was purified by prep-plate chromatography on silica gel, eluting with CH<sub>2</sub>Cl<sub>2</sub>- 5% (MeOH-10% NH<sub>4</sub>OH) to give the title compound (877) (0.0394g) . MH<sup>+</sup> = 595,  $\delta_H$  (CDCl<sub>3</sub>) 8.6 ( 1H); 8.05 ( 1H); 7.22-7.5 ( 8H); 6.99 ( 1H); 6.95 ( 1H); 6.93 ( 1H); 4.99 –5.25 ( 2H); 4.6 (1H); 3.1 – 3.25 ( 4H); 2.25 ( 3H), 1.8 – 2.05 ( 4H).

10

EXAMPLE 504Compound (878)

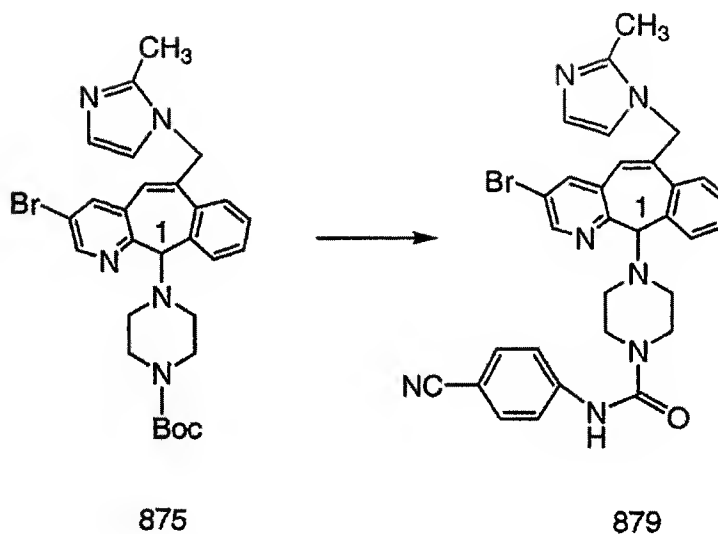

15

Reacting compound (874) in essentially the same manner as described in Example 503 above, gave the title compound. (878) MH<sup>+</sup> = 595,  $\delta_H$  (CDCl<sub>3</sub>) 8.6 ( 1H); 8.05 ( 1H); 7.22-7.5 ( 8H); 6.99 ( 1H); 6.95 ( 1H); 6.93 ( 1H); 4.99 –5.25 ( 2H); 4.6 (1H); 3.1 – 3.25 ( 4H); 2.25 ( 3H), 1.8 – 2.05 ( 4H).

20

EXAMPLE 505Compound (879)

356

- Reacting compound (875) in essentially the same manner as described in
- 5 Example 503 above, gave the title compound (879).  $MH^+ = 595$ ,  $\delta_H$  ( $CDCl_3$ ) 8.55 (1H); 7.78 (1H); 7.65 (1H); 7.4 – 7.51 (6H); 6.98 (1H); 6.9 (1H); 6.85 (1H); 5.05 – 5.3 (2H); 4.6 (1H); 3.1 – 3.25 (4H); 2.5 (3H), 1.8 – 2.00 (4H).

### ASSAYS

- 10 FPT activity was determined by measuring the transfer of [ $^3H$ ] farnesyl from [ $^3H$ ] farnesyl pyrophosphate to a biotinylated peptide derived from the C-terminus of H-ras (biotin-CVLS). The reaction mixture contains: 50 mM Tris pH7.7, 5 mM  $MgCl_2$ , 5  $\mu M$   $Zn^{++}$ , 5 mM DTT, 0.1% Triton-X, 0.05  $\mu M$  peptide, 0.03 nM purified human farnesyl protein transferase, 0.180  $\mu M$  [ $^3H$ ] farnesyl pyrophosphate, plus the indicated
- 15 concentration of tricyclic compound or vehicle control in a total volume of 100  $\mu l$ . The reaction was incubated in a Vortemp shaking incubator at 37°C, 45 RPM for 60 minutes and stopped with 150  $\mu l$  of 0.25 M EDTA containing 0.5% BSA and 1.3 mg/ml Streptavidin SPA beads. Radioactivity was measured in a Wallach 1450 Microbeta liquid scintillation counter. Percent inhibition was calculated relative to the vehicle
- 20 control.

COS Cell  $IC_{50}$  (Cell-Based Assay) were determined following the assay procedures described in WO 95/10516, published April 20, 1995. GGPT  $IC_{50}$  (inhibition of geranylgeranyl protein transferase, in vitro enzyme assay), Cell Mat

Biochemical assay and anti-tumor activity (in vivo anti-tumor studies) could be determined by the assay procedures described in WO 95/10516. The disclosure of WO 95/10516 is incorporated herein by reference thereto.

Various tumor cells ( $5 \times 10^5$  to  $8 \times 10^6$ ) were inoculated subcutaneously into the flank of 5-6 week old athymic nu/nu female mice. Three tumor cell models were used: mouse fibroblasts transformed with H-Ras; HTB-177 human non small cell lung cancer cells or LOX human melanoma cells. Animals were treated with beta cyclodextran vehicle only or compounds in vehicle twice a day (BID) or once a day (QD) for 7 days per week for 1 (x1), 2 (x2) or 3 (x3) weeks. The percent inhibition of tumor growth relative to vehicle controls were determined by tumor measurements. The results are reported in the table below:

Compound No.	Tumor	Dose (MPK)	Route and Schedule	Average % Tumor Inhibition
(372)	H-Ras fibroblasts	40	po, BID, x2	92
"	H-Ras fibroblasts	10	po, BID, x2	70
"	H-Ras fibroblasts	80	po, QD, x2	91
"	H-Ras fibroblasts	20	po, QD, x2	55
"	H-Ras fibroblasts	60	po, BID, x2	98
"	H-Ras fibroblasts	20	po, BID, x2	59
"	H-Ras fibroblasts	6.6	po, BID, x2	19
"	HTB-177	60	po, BID, x3	87
"	HTB-177	20	po, BID, x3	43
"	HTB-177	120	po, QD, x3	54
"	HTB-177	40	po, QD, x3	11
"	HTB-177	80	po, BID, x3	96
"	HTB-177	40	po, BID, x3	79
"	HTB-177	20	po, BID, x3	47
"	LOX	15	po, BID, x1	20.9
"	LOX	30	po, BID, x1	54.8
"	LOX	60	po, BID, x1	90.3

(The schedule "po, BID, x3", for example, means orally, twice a day for 7 days (14 times per week) for 3 weeks).

Soft Agar Assay:

Anchorage-independent growth is a characteristic of tumorigenic cell lines. Human tumor cells can be suspended in growth medium containing 0.3% agarose and an indicated concentration of a farnesyl transferase inhibitor. The solution can be  
5 overlaid onto growth medium solidified with 0.6% agarose containing the same concentration of farnesyl transferase inhibitor as the top layer. After the top layer is solidified, plates can be incubated for 10-16 days at 37°C under 5% CO<sub>2</sub> to allow colony outgrowth. After incubation, the colonies can be stained by overlaying the agar with a solution of MTT (3-[4,5-dimethyl-thiazol-2-yl]-2,5-diphenyltetrazolium bromide,  
10 Thiazolyl blue) (1 mg/mL in PBS). Colonies can be counted and the IC<sub>50</sub>'s can be determined:

Compounds of this invention have an FPT IC<sub>50</sub> in the range of 0.001 nM to 100 nM and a Soft Agar IC<sub>50</sub> in the range of 0.01 nM to 50 nM.

15 The preferred compounds of the invention have an FPT IC<sub>50</sub> range of between <0.06 nM – 0.44 nM and a Soft agar IC<sub>50</sub> range of between <0.05 nM – 25 nM.

The most preferred compounds have an FPT IC<sub>50</sub> range of between <0.05 nM – 3.0 nM and Soft agar IC<sub>50</sub> range of between 0.5 nM – 5 nM.

For preparing pharmaceutical compositions from the compounds described by  
20 this invention, inert, pharmaceutically acceptable carriers can be either solid or liquid. Solid form preparations include powders, tablets, dispersible granules, capsules, cachets and suppositories. The powders and tablets may be comprised of from about 5 to about 95 percent active ingredient. Suitable solid carriers are known in the art, e.g. magnesium carbonate, magnesium stearate, talc, sugar or lactose. Tablets,  
25 powders, cachets and capsules can be used as solid dosage forms suitable for oral administration. Examples of pharmaceutically acceptable carriers and methods of manufacture for various compositions may be found in A. Gennaro (ed.), Remington's Pharmaceutical Sciences, 18th Edition, (1990), Mack Publishing Co., Easton, Pennsylvania.

30 Liquid form preparations include solutions, suspensions and emulsions. As an example may be mentioned water or water-propylene glycol solutions for parenteral injection or addition of sweeteners and opacifiers for oral solutions, suspensions and

emulsions. Liquid form preparations may also include solutions for intranasal administration.

Aerosol preparations suitable for inhalation may include solutions and solids in powder form, which may be in combination with a pharmaceutically acceptable carrier,  
5 such as an inert compressed gas, e.g. nitrogen.

Also included are solid form preparations which are intended to be converted, shortly before use, to liquid form preparations for either oral or parenteral administration. Such liquid forms include solutions, suspensions and emulsions.

The compounds of the invention may also be deliverable transdermally. The  
10 transdermal compositions can take the form of creams, lotions, aerosols and/or emulsions and can be included in a transdermal patch of the matrix or reservoir type as are conventional in the art for this purpose.

Preferably, the pharmaceutical preparation is in a unit dosage form. In such form, the preparation is subdivided into suitably sized unit doses containing  
15 appropriate quantities of the active component, e.g., an effective amount to achieve the desired purpose.

The quantity of the compounds of the present invention in a unit dose of preparation may be varied or adjusted from about 0.01 mg to about 1000 mg, preferably from about 0.01 mg to about 750 mg, more preferably from about 0.01 mg  
20 to about 500mg, and most preferably from about 0.01 mg to about 250mg, according to the particular application.

The amount and frequency of administration of the compounds of the present invention and/or the pharmaceutically acceptable salts thereof will be regulated according to the judgment of the attending clinician considering such factors as age,  
25 condition and size of the patient as well as severity of the symptoms being treated. A typical recommended daily dosage regimen for oral administration can range from about 0.04 mg/day to about 4000 mg/day, in single or divided doses, preferably, in two to four divided doses.

The chemotherapeutic agent and/or radiation therapy can be administered in  
30 association with the compounds of the present invention according to the dosage and administration schedule listed in the product information sheet of the approved agents, in the Physicians Desk Reference (PDR) as well as therapeutic protocols well known in the art. Table 1.0 below gives ranges of dosage and dosage regimens of some

exemplary chemotherapeutic agents useful in the methods of the present invention. It will be apparent to those skilled in the art that the administration of the chemotherapeutic agent and/or radiation therapy can be varied depending on the disease being treated and the known effects of the chemotherapeutic agent and/or radiation therapy on that disease. Also, in accordance with the knowledge of the skilled clinician, the therapeutic protocols (e.g., dosage amounts and times of administration) can be varied in view of the observed effects of the administered chemotherapeutic agents (i.e., antineoplastic agent or radiation) on the patient, and in view of the observed responses of the disease to the administered therapeutic agents.

In a preferred example of combination therapy in the treatment of pancreatic cancer, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the antineoplastic agent, gemcitabine, which is administered at a dosage of from 750 to 1350 mg/m<sup>2</sup> weekly for three out of four weeks during the course of treatment.

In a preferred example of combination therapy in the treatment of lung cancer, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the antineoplastic agent, paclitaxel, which is administered at a dosage of from 65 to 175 mg/m<sup>2</sup> once every three weeks.

In a preferred example of combination therapy in the treatment of gliomas, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses; in association with the antineoplastic agent, temozolomide, which is administered at a dosage of from 100 to 250 mg/m<sup>2</sup>.

In another example of combination therapy, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the antineoplastic agent, cisplatin, which is administered intravenously in a range of from 50 to 100 mg/m<sup>2</sup> once every four weeks.

In another example of combination therapy, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the antineoplastic agent, carboplatin, which is administered intravenously in a range of from 300 - 360 mg/m<sup>2</sup> once every four weeks.

In another example of combination therapy, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the chemotherapeutic agent, carboplatin, which is administered

intravenously in a range of from 300 to 360 mg/m<sup>2</sup> once every four weeks and the chemotherapeutic agent, paclitaxel, which is administered at a dosage of from 65 to 175 mg/m<sup>2</sup> once every three weeks.

5 In yet another example of combination therapy, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses, in association with the chemotherapeutic agent, Cisplatin, which is administered intravenously in a range of from 50 to 100 mg/m<sup>2</sup> once every four weeks and the chemotherapeutic agent, Gemcitabine, which is administered at a dosage of from 65 to 175 mg/m<sup>2</sup> once every three weeks.

10 The signal transduction inhibition therapy can be administered according to the dosage and administration schedule listed in the product information sheet of the approved agents, in the Physicians Desk Reference (PDR) as well as therapeutic protocols well known in the art. Table (2.0) below gives ranges of dosage and dosage regimens of some exemplary signal transduction inhibitors. It will be apparent to  
15 those skilled in the art that the administration of the signal transduction inhibitor can be varied depending on the disease being treated and the known effects of the signal transduction inhibitor therapy on that disease. Also, in accordance with the knowledge of the skilled clinician, the therapeutic protocols (e.g., dosage amounts and times of administration) can be varied in view of the observed effects of the  
20 administered signal transduction inhibitors on the patient, and in view of the observed responses of the disease to the administered therapeutic agents.

In another example of combination therapy, the compound of Formula (I) is administered orally in a range of from 50 to 400 mg/day, in two divided doses in association with the signal transduction inhibitor, EGF receptor kinase inhibitor, Iressa (ZD1839), which is administered orally in the range of 150 – 700 mg/day.  
25

TABLE 1.0Exemplary Chemotherapeutic Agents Dosage and Dosage Regimens

5	Cisplatin:	50 - 100 mg/m <sup>2</sup> every 4 weeks (IV)*
	Carboplatin:	300 - 360 mg/m <sup>2</sup> every 4 weeks (IV)
	Taxotere:	60 - 100 mg/m <sup>2</sup> every 3 weeks (IV)

---

10 \*(IV)-intravenously

TABLE 2.0Exemplary Signal Transduction Inhibitors Dosage and Dosage Regimens

15	Iressa (ZD1839) - EGF receptor kinase inhibitor:	150 - 700 mg/day (oral)
	OSI-774 - EGF receptor kinase inhibitor:	100 - 1000 mg/day (oral)
20	Herceptin - her-2/neu antibody:	100 - 250 mg/m <sup>2</sup> /week (IV)*
	C225 - EGF receptor antibody:	200 - 500 mg/m <sup>2</sup> /week (IV)
	ABX-EGF - EGF receptor antibody:	0.2 - 2 mg/kg every 2 weeks (IV)
25	Gleevec (STI-571) - bcr/abl kinase inhibitor:	300 - 1000 mg / day (oral)

---

\*(IV)-Intravenously

30 In the methods of the present invention, an FPT inhibitor compound of formula (I) is administered concurrently or sequentially with another therapeutic agent (i.e. a chemotherapeutic agent, a signal transduction inhibitor and/or radiation). Thus, it is not necessary that, for example, the therapeutic agent and the FPT inhibitor compound of formula (I) be administered simultaneously, just prior to or after one

35 another.

Also, in general, the FPT inhibitor compound of formula (I), the chemotherapeutic agent, signal transduction inhibitor and/or radiation, do not have to be administered in the same pharmaceutical composition, and may, because of different physical and chemical characteristics, have to be administered by different

40 routes. For example, the FPT inhibitor compound of formula (I) may be administered orally to generate and maintain good blood levels thereof, while the chemotherapeutic

agent may be administered intravenously. The determination of the mode of administration and the advisability of administration, where possible, in the same pharmaceutical composition, is well within the knowledge of the skilled clinician. The initial administration can be made according to established protocols known in the art, and then, based upon the observed effects, the dosage, modes of administration and times of administration can be modified by the skilled clinician .

The particular choice of the FPT inhibitor compound of formula (I), the chemotherapeutic agent, signal transduction inhibitor and/or radiation will depend upon the diagnosis of the attending physicians and their judgement of the condition of the patient and the appropriate treatment protocol.

The FPT inhibitor compound of formula (I), chemotherapeutic agent, signal transduction inhibitor and/or radiation may be administered concurrently (e.g., simultaneously, just prior to or after, or within the same treatment protocol) or sequentially, depending upon the nature of the proliferative disease, the condition of the patient, and the actual choice of chemotherapeutic agent, signal transduction inhibitor and/or radiation to be administered in conjunction (i.e., within a single treatment protocol) with the FPT inhibitor compound of formula (I).

If the FPT inhibitor compound of formula (I), chemotherapeutic agent, signal transduction inhibitor and/or radiation are not administered simultaneously, then the initial order of administration of the FPT inhibitor compound of formula (I), chemotherapeutic agent, signal transduction inhibitor and/or radiation, may not be important. Thus, the FPT inhibitor compound of formula (I) may be administered first followed by the administration of the chemotherapeutic agent, signal transduction inhibitor and/or radiation; or the chemotherapeutic agent, signal transduction inhibitor and/or radiation may be administered first followed by the administration of the FPT inhibitor compound of formula (I). This alternate administration may be repeated during a single treatment protocol. The determination of the order of administration, and the number of repetitions of administration of each therapeutic agent during a treatment protocol, is well within the knowledge of the skilled physician after evaluation of the disease being treated and the condition of the patient. For example, the chemotherapeutic agent, signal transduction inhibitor and/or radiation may be administered first, especially if it is a cytotoxic agent, and then the treatment continued with the administration of the FPT Inhibitor compound of formula (I), followed by,

where determined advantageous, the administration of the chemotherapeutic agent , signal transduction inhibitor and/or radiation, and so on until the treatment protocol is complete.

Thus, in accordance with experience and knowledge, the practising physician  
5 can modify each protocol for the administration of a component (therapeutic agent--  
i.e., FPT inhibitor compound of formula (I), chemotherapeutic agent, signal  
transduction inhibitor or radiation) of the treatment according to the individual patient's  
needs, as the treatment proceeds.

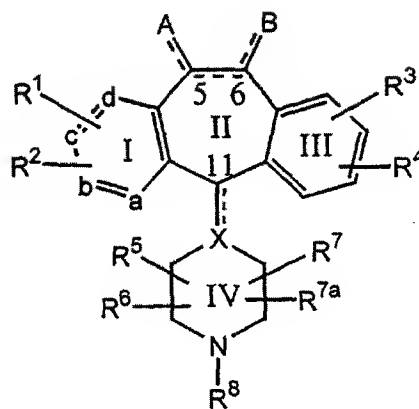

The attending clinician, in judging whether treatment is effective at the dosage  
10 administered, will consider the general well-being of the patient as well as more  
definite signs such as relief of disease-related symptoms, inhibition of tumor growth,  
actual shrinkage of the tumor, or inhibition of metastasis. Size of the tumor can be  
measured by standard methods such as radio-logical studies, e.g., CAT or MRI scan,  
and successive measure-ments can be used to judge whether or not growth of the  
15 tumor has been retarded or even reversed. Relief of disease-related symptoms such  
as pain, and improvement in overall condition can also be used to help judge  
effectiveness of treatment.

While the present invention has been described in conjunction with the specific  
20 embodiments set forth above, many alternatives, modifications and variations thereof  
will be apparent to those of ordinary skill in the art. All such alternatives, modifications  
and variations are intended to fall within the spirit and scope of the present invention.

What is claimed is:

1. A compound of the formula:

5

(1.0)

or a pharmaceutically acceptable salt or solvate thereof, wherein:

one of a, b, c and d represents N or N<sup>+</sup>O<sup>-</sup>, and the remaining a, b, c, and d groups represent carbon, wherein each carbon has an R<sup>1</sup> or R<sup>2</sup> group bound to said

10 carbon; or

each of a, b, c, and d is carbon, wherein each carbon has an R<sup>1</sup> or R<sup>2</sup> group bound to said carbon;

the dotted lines (—) represent optional bonds;

X represents N or CH when the optional bond is absent, and represents C

15 when the optional bond is present;

when the optional bond is present between carbon atom 5 and carbon atom 6 then there is only one A substituent bound to carbon atom 5 and there is only one B substituent bound to carbon atom 6 and A or B is other than H;

when the optional bond is not present between carbon atom 5 and carbon atom 6, then there are two A substituents bound to carbon atom 5 and two B substituents bound to carbon atom 6, wherein each A and B substituent is independently selected from:

- 5 (1) -H;
- (2) -R<sup>9</sup>;
- (3) -R<sup>9</sup>-C(O)-R<sup>9</sup>;
- (4) -R<sup>9</sup>-CO<sub>2</sub>-R<sup>9a</sup>;
- (5) -(CH<sub>2</sub>)<sub>p</sub>R<sup>26</sup>;
- 10 (6) -C(O)N(R<sup>9</sup>)<sub>2</sub>, wherein each R<sup>9</sup> is the same or different;
- (7) -C(O)NHR<sup>9</sup>;
- (8) -C(O)NH-CH<sub>2</sub>-C(O)-NH<sub>2</sub>;
- (9) -C(O)NHR<sup>26</sup>;
- (10) -(CH<sub>2</sub>)<sub>p</sub>C(R<sup>9</sup>)-O-R<sup>9a</sup>;
- 15 (11) -(CH<sub>2</sub>)<sub>p</sub>(R<sup>9</sup>)<sub>2</sub>, wherein each R<sup>9</sup> is the same or different;
- (12) -(CH<sub>2</sub>)<sub>p</sub>C(O)R<sup>9</sup>;
- (13) -(CH<sub>2</sub>)<sub>p</sub>C(O)R<sup>27a</sup>;
- (14) -(CH<sub>2</sub>)<sub>p</sub>C(O)N(R<sup>9</sup>)<sub>2</sub>, wherein each R<sup>9</sup> is the same or different;
- (15) -(CH<sub>2</sub>)<sub>p</sub>C(O)NH(R<sup>9</sup>);
- 20 (16) -(CH<sub>2</sub>)<sub>p</sub>C(O)N(R<sup>26</sup>)<sub>2</sub>, wherein each R<sup>26</sup> is the same or different;
- (17) -(CH<sub>2</sub>)<sub>p</sub>N(R<sup>9</sup>)-R<sup>9a</sup>;
- (18) -(CH<sub>2</sub>)<sub>p</sub>N(R<sup>26</sup>)<sub>2</sub>, wherein R<sup>26</sup> is the same or different;
- (19) -(CH<sub>2</sub>)<sub>p</sub>NHC(O)R<sup>50</sup>;
- (20) -(CH<sub>2</sub>)<sub>p</sub>NHC(O)<sub>2</sub>R<sup>50</sup>;
- 25 (21) -(CH<sub>2</sub>)<sub>p</sub>N(C(O)R<sup>27a</sup>)<sub>2</sub> wherein each R<sup>27a</sup> is the same or different;

(22)  $-(CH_2)_pNR^{51}C^{367}(O)R^{27}$ , or  $R^{51}$  and  $R^{27}$  taken together with the atoms to which they are bound form a heterocycloalkyl ring consisting of, 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;

(23)  $-(CH_2)_pNR^{51}C(O)NR^{27}$ , or  $R^{51}$  and  $R^{27}$  taken together with the atoms to which they are bound form a heterocycloalkyl ring consisting of 5 or 6 members, provided that when  $R^{51}$  and  $R^{27}$  form a ring,  $R^{51}$  is not H;

(24)  $-(CH_2)_pNR^{51}C(O)N(R^{27a})_2$ , wherein each  $R^{27a}$  is the same or different;

(25)  $-(CH_2)_pNH\text{SO}_2N(R^{51})_2$ , wherein each  $R^{51}$  is the same or different;

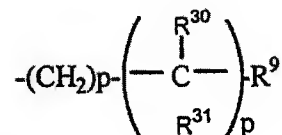

(26)  $-(CH_2)_pNH\text{CO}_2R^{50}$ ;

10 (27)  $-(CH_2)_pNC(O)NHR^{51}$ ;

(28)  $-(CH_2)_p\text{CO}_2R^{51}$ ;

(29)  $-NHR^9$ ;

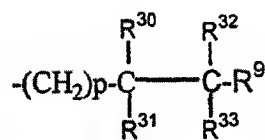

(30)

wherein  $R^{30}$  and  $R^{31}$  are the

15 same or different;

(31)

, wherein  $R^{30}$ ,  $R^{31}$ ,  $R^{32}$  and  $R^{33}$  are the

same or different;

20 (32)  $-\text{alkenyl}-\text{CO}_2R^{9a}$ ;

(33)  $-\text{alkenyl}-C(O)R^{9a}$ ;

(34)  $-\text{alkenyl}-\text{CO}_2R^{51}$ ;

368

(35) -alkenyl-C(O)-R<sup>27a</sup>;(36) (CH<sub>2</sub>)<sub>p</sub>-alkenyl-CO<sub>2</sub>-R<sup>51</sup> ;(37) -(CH<sub>2</sub>)<sub>p</sub>C=NOR<sup>51</sup> and(38) -(CH<sub>2</sub>)<sub>p</sub>-Phthalimid;

5 p is 0, 1, 2, 3 or 4;

each R<sup>1</sup> and R<sup>2</sup> is independently selected from H, Halogen, -CF<sub>3</sub>,-OR<sup>10</sup>, COR<sup>10</sup>, -SR<sup>10</sup>, -S(O)<sub>t</sub>R<sup>15</sup> wherein t is 0, 1 or 2, -N(R<sup>10</sup>)<sub>2</sub>, -NO<sub>2</sub>,-OC(O)R<sup>10</sup>, CO<sub>2</sub>R<sup>10</sup>, -OCO<sub>2</sub>R<sup>15</sup>, -CN, -NR<sup>10</sup>COOR<sup>15</sup>, -SR<sup>15</sup>C(O)OR<sup>15</sup>,-SR<sup>15</sup>N(R<sup>13</sup>)<sub>2</sub> provided that R<sup>15</sup> in -SR<sup>15</sup>N(R<sup>13</sup>)<sub>2</sub> is not -CH<sub>2</sub>, and wherein each

10 R<sup>13</sup> is independently selected from H or -C(O)OR<sup>15</sup>, benzotriazol-1-yloxy, tetrazol-5-ylthio, or substituted tetrazol-5-ylthio, alkynyl, alkenyl or alkyl, said alkyl or alkenyl group optionally being substituted with halogen, -OR<sup>10</sup> or -CO<sub>2</sub>R<sup>10</sup>;

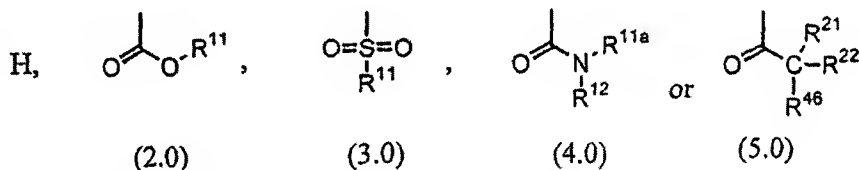

R<sup>3</sup> and R<sup>4</sup> are the same or different and each independently represent H, or any of the substituents of R<sup>1</sup> and R<sup>2</sup>;

15 R<sup>5</sup>, R<sup>6</sup>, R<sup>7</sup> and R<sup>7a</sup> each independently represent H, -CF<sub>3</sub>,

-COR<sup>10</sup>, alkyl or aryl, said alkyl or aryl optionally being substituted with-OR<sup>10</sup>, -SR<sup>10</sup>, -S(O)<sub>t</sub>R<sup>15</sup>, -NR<sup>10</sup>COOR<sup>15</sup>, -N(R<sup>10</sup>)<sub>2</sub>, -NO<sub>2</sub>, -C(O)R<sup>10</sup>,

-OCOR<sup>10</sup>, -OCO<sub>2</sub>R<sup>15</sup>, -CO<sub>2</sub>R<sup>10</sup>, OPO<sub>3</sub>R<sup>10</sup>, or R<sup>5</sup> is combined with R<sup>6</sup> to represent =O or =S;

20 R<sup>8</sup> is selected from:

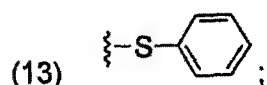

R<sup>9</sup> is selected from:

- (1) heteroaryl;
  - (2) substituted heteroaryl;
  - (3) arylalkoxy;
  - 5 (4) substituted arylalkoxy;
  - (5) heterocycloalkyl;
  - (6) substituted heterocycloalkyl;
  - (7) heterocycloalkylalkyl;
  - (8) substituted heterocycloalkylalkyl;
  - 10 (9) heteroarylalkyl;
  - (10) substituted heteroarylalkyl;
  - (11) heteroarylalkenyl;
  - (12) substituted heteroarylalkenyl;
  - (13) heteroarylalkynyl;
  - 15 (14) substituted heteroarylalkynyl;
  - (15) arylalkyl;
  - (16) substituted arylalkyl;
  - (17) alkenyl, and
  - (18) substituted alkenyl;
- 20 wherein said substituted R<sup>9</sup> groups are substituted with one or more substituents selected from:
- (1) -OH;
  - (2) -CO<sub>2</sub>R<sup>14</sup>;
  - (3) -CH<sub>2</sub>OR<sup>14</sup>;
  - 25 (4) halogen;

370

- 5
- (5) alkyl;
  - (6) amino;
  - (7) trityl;
  - (8) heterocycloalkyl;
  - (9) cycloalkyl;
  - (10) arylalkyl;
  - (11) heteroaryl;
  - (12) heteroarylalkyl and

10 wherein R<sup>14</sup> is independently selected from: H; alkyl; aryl, arylalkyl, heteroaryl and heteroarylalkyl;

R<sup>9a</sup> is selected from: alkyl or arylalkyl;

R<sup>10</sup> is selected from: H; alkyl; aryl or arylalkyl;

R<sup>11</sup> is selected from:

- 15
- (1) alkyl;
  - (2) substituted alkyl;
  - (3) aryl;
  - (4) substituted aryl;
  - (5) cycloalkyl;
  - (6) substituted cycloalkyl;
  - (7) heteroaryl;
  - (8) substituted heteroaryl;
  - (9) heterocycloalkyl; and
  - (10) substituted heterocycloalkyl;
- 20

371

wherein said substituted  $R^{11}$  groups have 1, 2 or 3 substituents selected from:

- (1) -OH;
- (2) halogen and
- (3) alkyl;

5  $R^{11a}$  is selected from:

- (1) H;
- (2) OH;
- (3) alkyl;
- (4) substituted alkyl;
- 10 (5) aryl;
- (6) substituted aryl;
- (7) cycloalkyl;
- (8) substituted cycloalkyl;
- (9) heteroaryl;
- 15 (10) substituted heteroaryl;
- (11) heterocycloalkyl; and
- (12) substituted heterocycloalkyl;

wherein said substituted  $R^{11a}$  groups have one or more substituents selected from:

- (1) -OH;
- 20 (2) -CN;
- (3) -CF<sub>3</sub>;
- (4) halogen;
- (5) alkyl;
- (6) cycloalkyl;
- 25 (7) heterocycloalkyl;

372

- (8) arylalkyl;
- (9) heteroarylalkyl;
- (10) alkenyl and
- (11) heteroalkenyl;

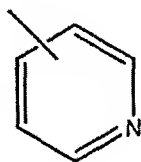

5  $R^{12}$  is selected from: H, or alkyl;

$R^{15}$  is selected from: alkyl or aryl;

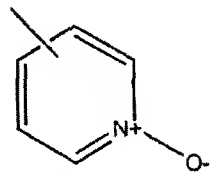

$R^{21}$ ,  $R^{22}$  and  $R^{46}$  are independently selected from:

- (1) -H;
- (2) alkyl;
- 10 (3) aryl;
- (4) substituted aryl,  
optionally substituted with one or more substituents selected  
from: alkyl, halogen,  $CF_3$  or OH;
- (5) cycloalkyl;
- 15 (6) substituted cycloalkyl;  
optionally substituted with one or more substituents selected from  
alkyl, halogen,  $CF_3$  or OH;
- (7) heteroaryl of the formula,

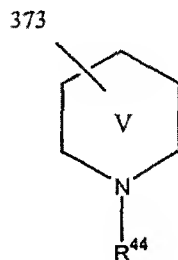

20

and

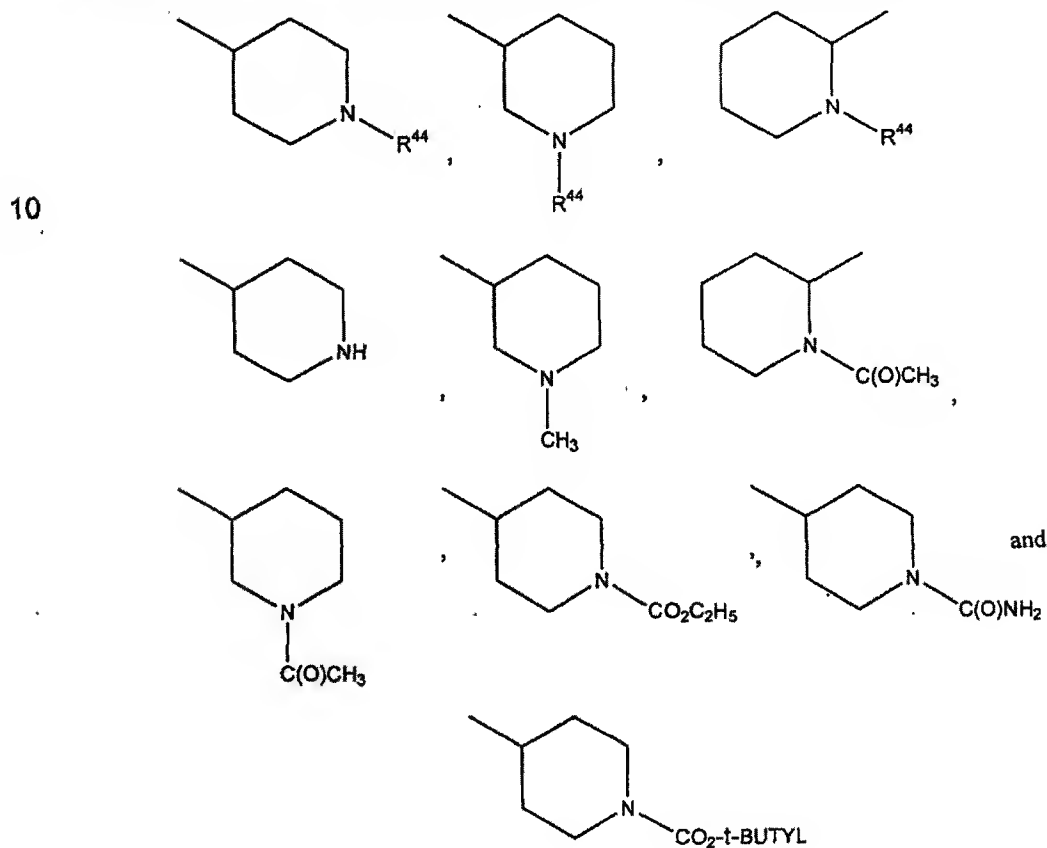

- (8) heterocycloalkyl of the formula:

wherein R<sup>44</sup> is selected from:

- 5
- (1) -H;
  - (2) alkyl;
  - (3) alkylcarbonyl;
  - (4) alkyloxy carbonyl;
  - (5) haloalkyl and
  - (6) -C(O)NH(R<sup>51</sup>);

when R<sup>21</sup>, R<sup>22</sup> or R<sup>46</sup> is the heterocycloalkyl of the formula above, Ring V is:

R<sup>26</sup> is selected from:

- 5
- (1) -H;
  - (2) alkyl;
  - (3) alkoxyl;
  - (4) -CH<sub>2</sub>-CN;
  - (5) R<sup>9</sup>;
  - (6) -CH<sub>2</sub>CO<sub>2</sub>H;
  - (7) -C(O)alkyl and
  - 10 (8) CH<sub>2</sub>CO<sub>2</sub>alkyl;

R<sup>27</sup> is selected from:

- 15
- (1) -H;
  - (2) -OH;
  - (3) alkyl and
  - (4) alkoxy ;

R<sup>27a</sup> is selected from:

- (1) alkyl or
- (2) alkoxy ;

R<sup>30</sup> through R<sup>33</sup> is independently selected from:

- 20
- (1) -H;
  - (2) -OH;
  - (3) =O;
  - (4) alkyl;
  - (5) aryl and
  - 25 (6) arylalkyl;

375

$R^{50}$  is selected from:

- (1) alkyl;
- (2) heteroaryl;
- (3) substituted heteroaryl and
- (4) amino;

5

wherein said substituents on said substituted  $R^{50}$  groups are independently selected from: alkyl; halogen; or  $-OH$ ;

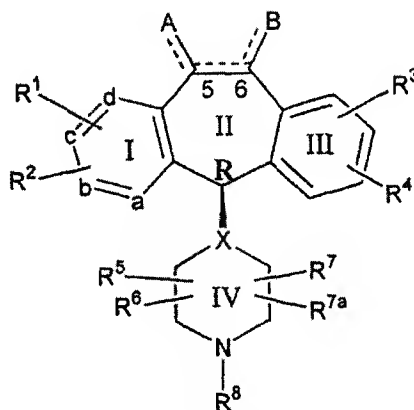

$R^{50a}$  is selected from:

- (1) heteroaryl;
- (2) substituted heteroaryl and
- (3) amino;

10

$R^{51}$  is selected from:  $-H$ , or alkyl.

2. A compound of Claim 1 having the structure:

(1.0A)

15

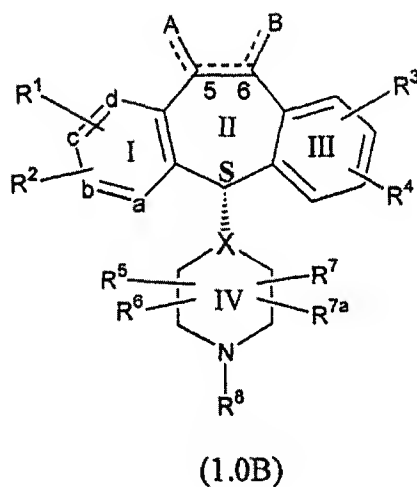

wherein:

$X = CH$  or  $N$ ;

376

B is H when the optional bond is present between C-5 and C-6, and when the optional bond between C-5 and C-6 is absent then each B is H;

or having the structure:

5            wherein:

X = CH or N;

A is H when the optional bond is present between C-5 and C-6, and when the optional bond between C-5 and C-6 is absent then each A is H.

3.        The compound of claim 1 wherein:

10                    R<sup>1</sup> to R<sup>4</sup> are each independently selected from H or halo;

R<sup>5</sup> to R<sup>7</sup> are H;

a is N and the remaining b, c and d are carbon, or a, b, c, and d are carbon; and

R<sup>8</sup> is group 2.0, or 4.0.

15            4.        The compound of claim 2 having the formula (1.0A) wherein;

a is N and the remaining b, c, and d are carbon, and

R<sup>1</sup> to R<sup>4</sup> are each independently selected from H, Br or Cl.

5.        The compound of claim 1 wherein:

(1) <sup>377</sup> R<sup>11</sup> is selected from: alkyl, cycloalkyl or substituted cycloalkyl,

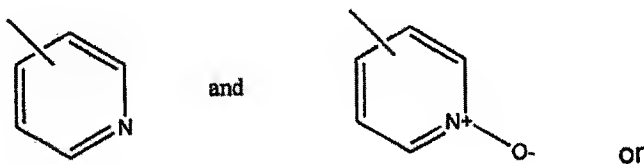

said substituted groups are substituted with halo, alkyl or amino;

(2) R<sup>11a</sup> is selected from: alkyl, aryl, substituted aryl, cycloalkyl or substituted cycloalkyl, said substituted groups are substituted with halo, -CN or CF<sub>3</sub>;

5 (3) R<sup>12</sup>, R<sup>21</sup>, and R<sup>22</sup> are H; and

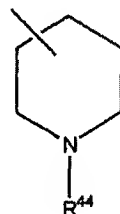

(4) R<sup>46</sup> is selected from: aryl, substituted aryl, heteroaryl of the

formula:

10

heterocycloalkyl of the formula:

15 wherein, said substituted groups are substituted with alkyl, alkylcarbonyl or haloalkyl;

(5) R<sup>44</sup> is selected from H or -C(O)NH<sub>2</sub>;

(6) R<sup>8</sup> is selected from:

(a) group 2.0 wherein R<sup>11</sup> is selected from:

t-butyl or cyclohexyl;

20

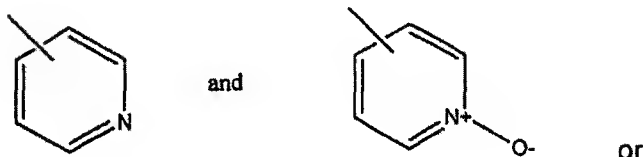

(b) group 3.0 wherein R<sup>11</sup> is selected from methyl or t-butyl;

(c) group 4.0 wherein, <sup>378</sup> $R^{12}$  is H and  $R^{11a}$  is selected from t-butyl, cyanophenyl, chlorophenyl, fluorophenyl or cyclohexyl;

(d) group 5.0 wherein  $R^{21}$  and  $R^{22}$  are H and  $R^{46}$  is selected from:

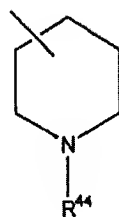

5

(1) heteroaryl of the formula:

(2) heterocycloalkyl of the formula:

10

and wherein  $R^{44}$  is  $-C(O)NH_2$ .

6. The compound of claim 5 wherein  $R^8$  is group 4.0.

15

7. The compound of claim 1 wherein one of A and B is H and the other is  $R^9$ .

8. The compound of claim 1 wherein  $R^9$  is selected from:

(1) heterocycloalkylalkyl of the formula  $-(CH_2)_n$ -heterocycloalkyl;

(2) substituted heterocycloalkylalkyl of the formula

20

$-(CH_2)_n$ -substituted heterocycloalkyl;

379

- (3) heteroarylalkyl of the formula  $-(CH_2)_n$ -heteroaryl, and  
(4) substituted heteroarylalkyl of the formula  $-(CH_2)_n$ -substituted heteroaryl.

wherein  $n$  is 1, 2, or 3 and the substituents for said substituted  $R^9$  groups are each

5 independently selected from:

- (1)  $-OH$ ;  
(2)  $-CO_2R^{14}$ ;  
(3)  $-CH_2OR^{14}$ ,  
(4) halo,  
10 (5) alkyl;  
(6) amino;  
(7) trityl;  
(8) heterocycloalkyl;  
(9) arylalkyl;  
15 (10) heteroaryl and  
(11) heteroarylalkyl.

wherein  $R^{14}$  is independently selected from: H; or alkyl.

9. The compound of claim 8 wherein  $R^9$  is

- (1)  $-(CH_2)_n$ -imidazolyl;  
20 (2)  $-(CH_2)_n$ -substituted imidazolyl;  
(3)  $-(CH_2)_n$ -morpholinyl;  
(4)  $-(CH_2)_n$ -substituted morpholinyl,  
(5)  $-(CH_2)_n$ -piperazinyl, or  
(6)  $-(CH_2)_n$ -substituted piperazinyl,

25 wherein  $n$  is 1, 2, or 3.

380

10. The compound of claim 1 wherein the optional bond is present between C-5 and C-6 and A is H and B is R<sup>9</sup>, or A is R<sup>9</sup> and B is H; or the optional bond between C-5 and C-6 is absent and each A is H, one B is H and the other B is R<sup>9</sup>, or one A is H, the other A is R<sup>9</sup> and each B is H; R<sup>1</sup> to R<sup>4</sup> are independently H or halo; F to R<sup>7a</sup> are H; a is N and the remaining b, c, an d substituents are carbon; X is N or Cl and R<sup>8</sup> is group 2.0 or 4.0.

11. The compound of claim 10 wherein R<sup>9</sup> is selected from:

- (1) heteroaryl;
- (2) substituted heteroaryl;
- 10 (3) arylalkyl;
- (4) substituted arylalkyl;
- (5) arylalkoxy;
- (6) substituted arylalkoxy;
- (7) heterocycloalkyl;
- 15 (8) substituted heterocycloalkyl;
- (9) heterocycloalkylalkyl;
- (10) substituted heterocycloalkylalkyl;
- (11) heteroarylalkyl;
- (12) substituted heteroarylalkyl;
- 20 (13) alkenyl;
- (14) substituted alkenyl;
- (15) heteroarylalkenyl and
- (16) substituted heteroarylalkenyl,

wherein substituents for said substituted R<sup>9</sup> groups are each independently selected  
25 from:

381

- (1) -OH;  
(2) -CO<sub>2</sub>R<sup>14</sup>;  
(3) -CH<sub>2</sub>OR<sup>14</sup>;  
(4) halo,  
5 (5) alkyl;  
(6) amino;  
(7) trityl;  
(8) heterocycloalkyl;  
(9) arylalkyl;  
10 (10) heteroaryl and  
(11) heteroarylalkyl,

wherein R<sup>14</sup> is independently selected from: H; or alkyl.

12. The compound of claim 11 wherein R<sup>9</sup> is selected from:

- (1) heterocycloalkylalkyl of the formula -(CH<sub>2</sub>)<sub>n</sub>-heterocycloalkyl;  
15 (2) substituted heterocycloalkylalkyl of the formula  
-(CH<sub>2</sub>)<sub>n</sub>-substituted heterocycloalkyl;  
(3) heteroarylalkyl of the formula -(CH<sub>2</sub>)<sub>n</sub>-heteroaryl, and  
(4) substituted heteroarylalkyl of the formula -(CH<sub>2</sub>)<sub>n</sub>-substituted  
heteroaryl.

20 wherein substituents for said substituted R<sup>9</sup> groups are each independently  
selected from:

- (1) -OH;  
(2) -CO<sub>2</sub>R<sup>14</sup>;  
(3) -CH<sub>2</sub>OR<sup>14</sup>;  
25 (4) halo,

- 5
- (5) alkyl;
  - (6) amino;
  - (7) trityl;
  - (8) heterocycloalkyl;
  - (9) arylalkyl;
  - (10) heteroaryl and
  - (11) heteroarylalkyl.

13. The compound of claim 12 wherein  $R^8$  is group 4.0 and wherein  $R^{12}$  is H and  $R^{11a}$  is selected from:

- 10
- (1) alkyl;
  - (2) aryl;
  - (3) substituted aryl;
  - (4) cycloalkyl and
  - (5) substituted cycloalkyl,

15 wherein said substituents of said substituted groups are selected from:

- (1) halo;
- (2) -CN or
- (3) -CF<sub>3</sub>.

14. The compound of claim 12 wherein  $R^9$  is

- 20
- (1)  $-(CH_2)_n$ -imidazolyl;
  - (2)  $-(CH_2)_n$ -substituted imidazolyl;
  - (3)  $-(CH_2)_n$ -morpholinyl;
  - (4)  $-(CH_2)_n$ -substituted morpholinyl;
  - (5)  $-(CH_2)_n$ -piperazinyl, or
  - 25 (6)  $-(CH_2)_n$ -substituted piperazinyl,

wherein n is 1, 2, or 3.

15. The compound of claim 14 wherein the optional bond is present.

16. The compound of claim 15 wherein  $R^8$  is 4.0 and wherein  $R^{12}$  is H and  $R^{11a}$  is selected from:

- 5
- (1) alkyl;
  - (2) aryl;
  - (3) substituted aryl;
  - (4) cycloalkyl, and
  - (5) substituted cycloalkyl,

10 wherein said substituents of said substituted groups are selected from:

- (1) halo;
- (2) cyano, and
- (3)  $CF_3$ .

17. The compound of claim 16 wherein  $R^8$  is 4.0,  $R^{12}$  is H and  $R^{11a}$  is  
15 substituted phenyl and wherein said substituent of said substituted group selected from:

- (1) -CN or
- (2)  $CF_3$ .

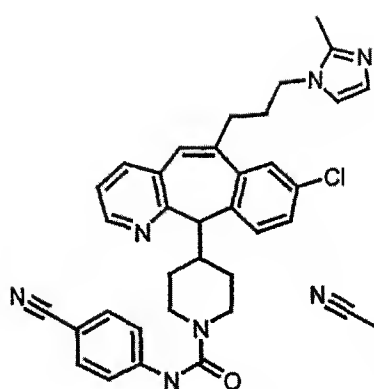

20

18. The compound of claim 14 wherein the optional bond is absent.

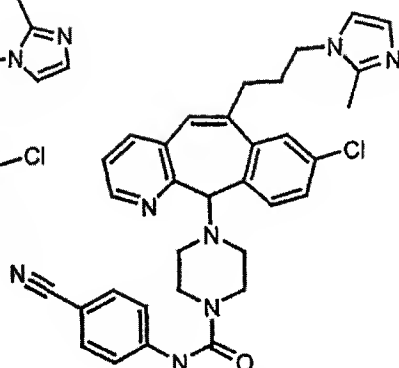

19. The compound according to claim 1 which is selected from any one of the Examples 1-505.

20. The compound according to claim 1 which is selected from the  
25 group consisting of:

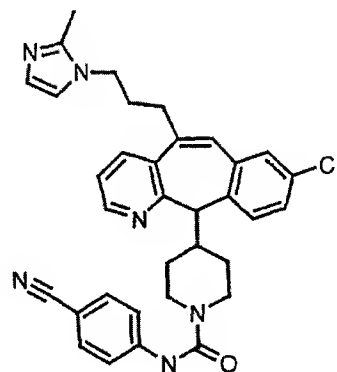

384

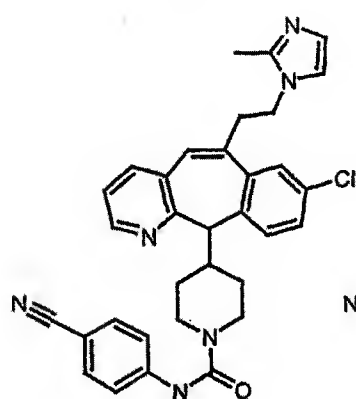

(139)

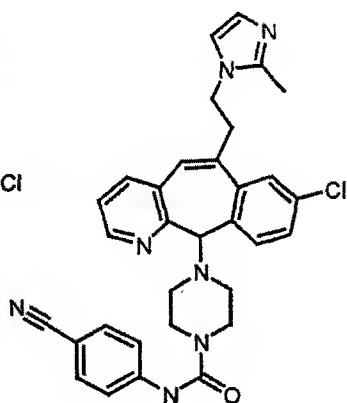

(628)

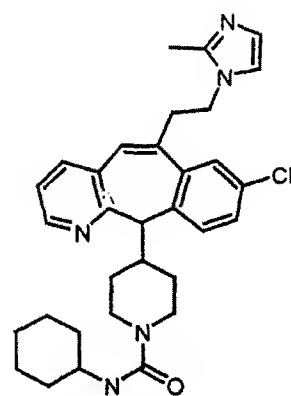

(699)

(326)

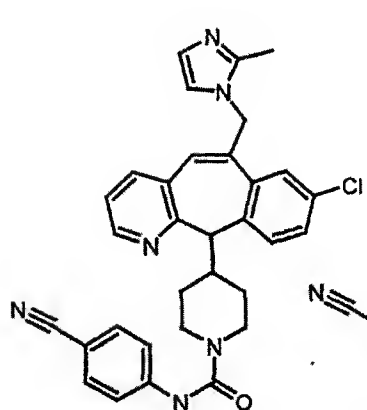

(644)

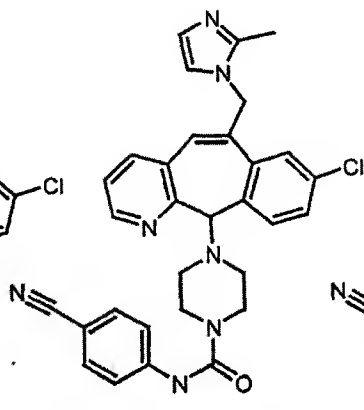

(332)

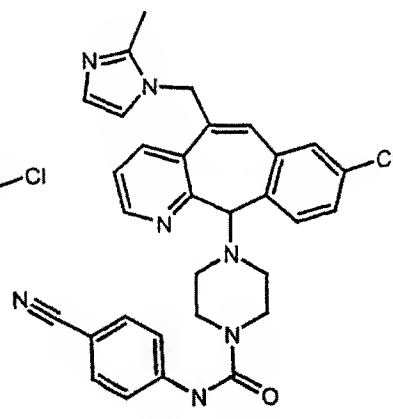

5

(362a)

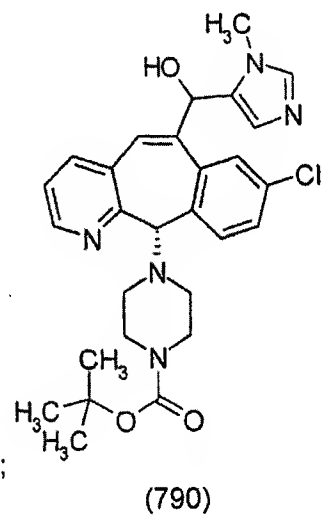

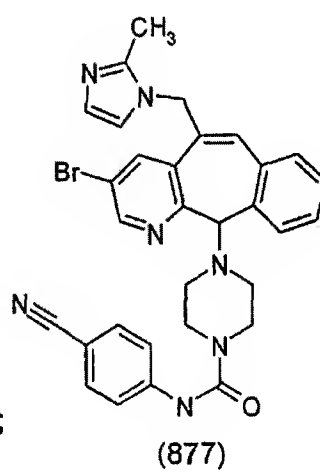

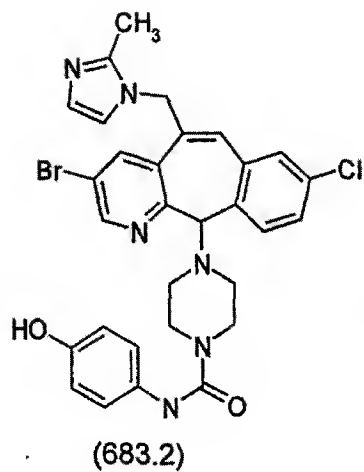

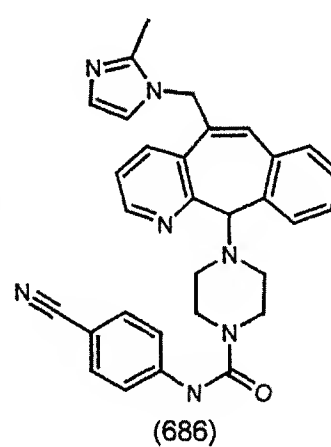

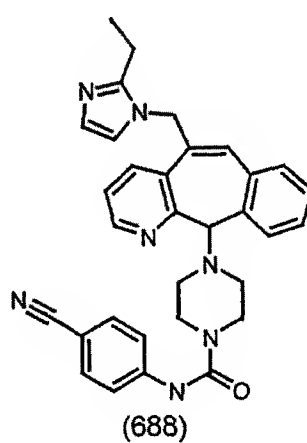

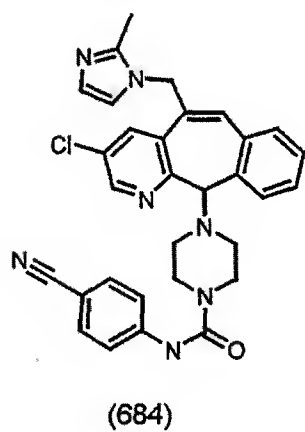

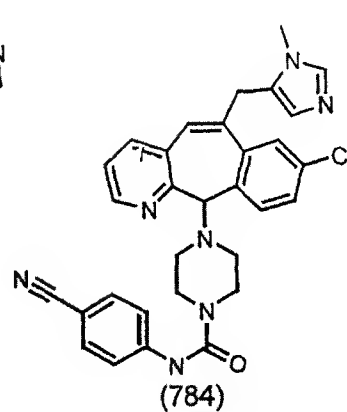

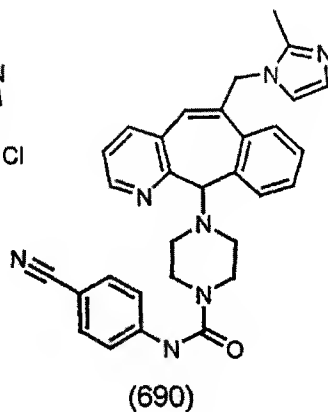

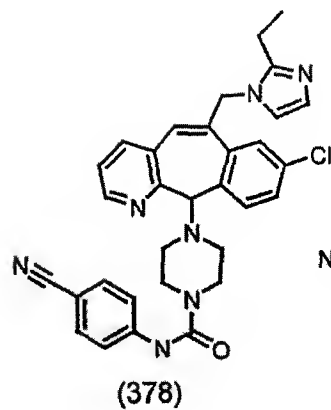

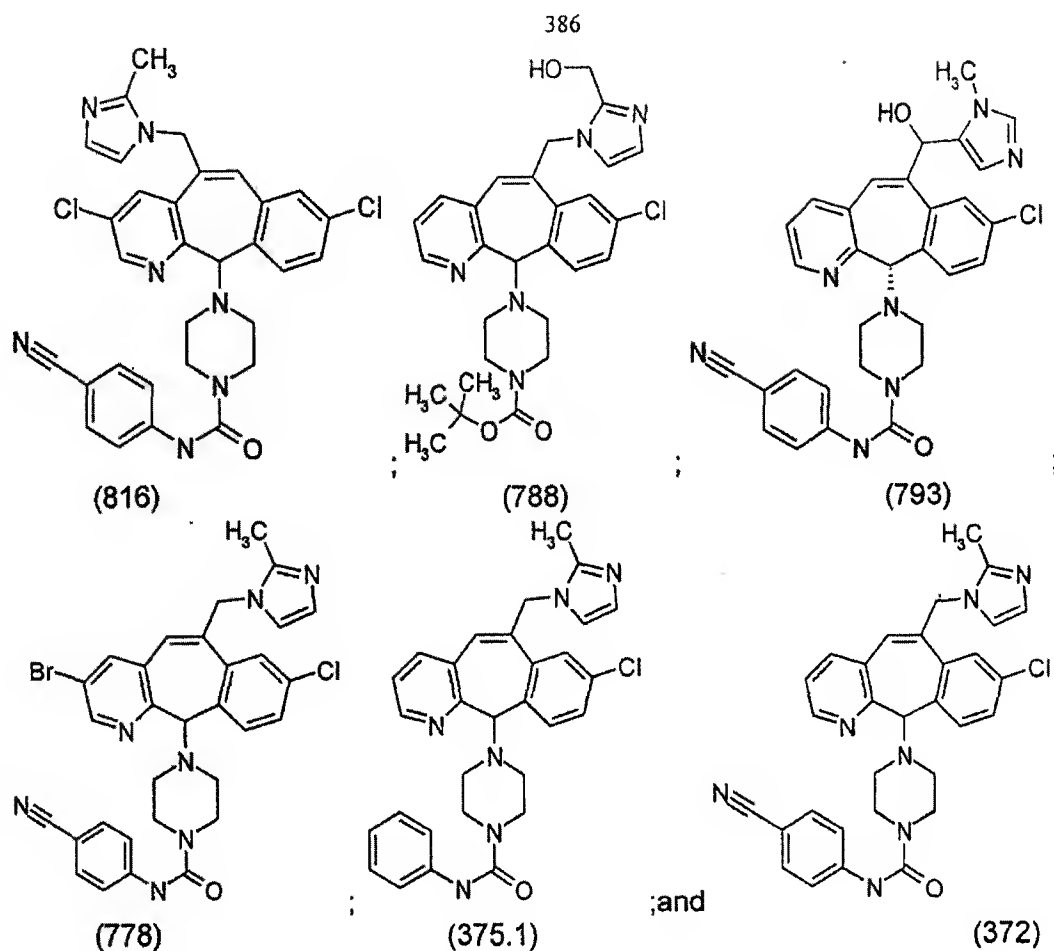

(372)

(230)

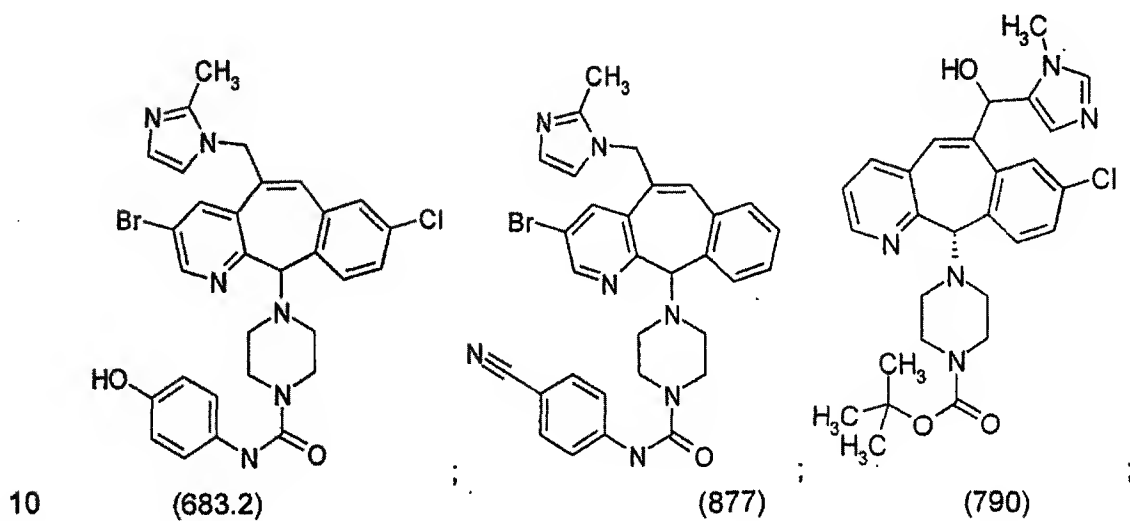

385

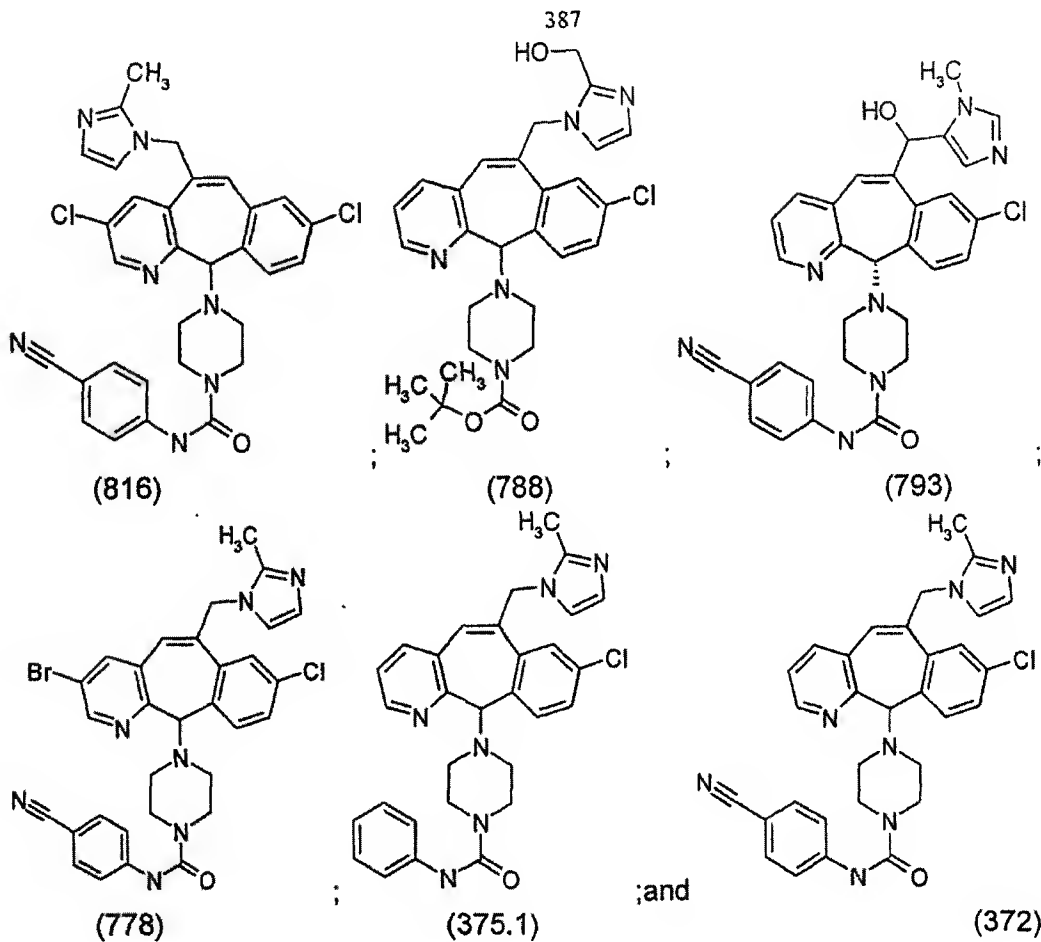

5

21. The compound according to claim 1 which is selected from the group consisting of:

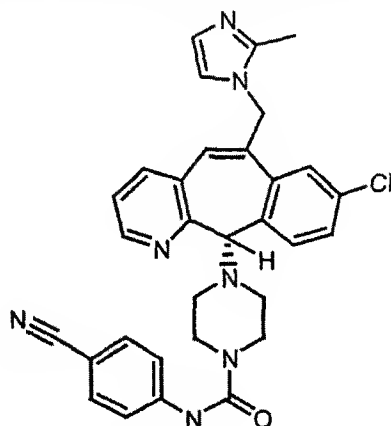

10

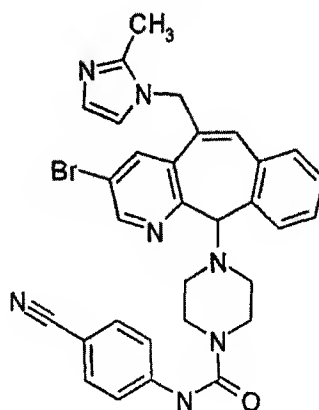

388

22. The compound according to claim 1 which is:

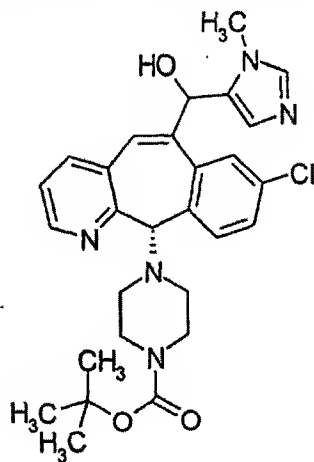

23. The compound according to claim 1 which is:

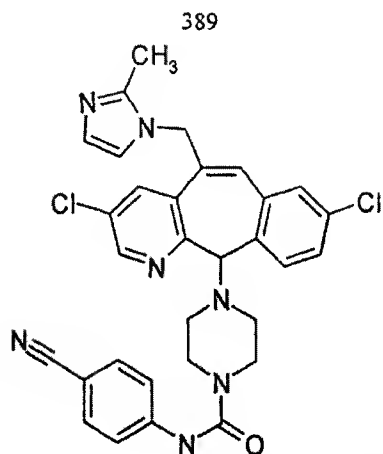

5

24. The compound according to claim 1 which is:

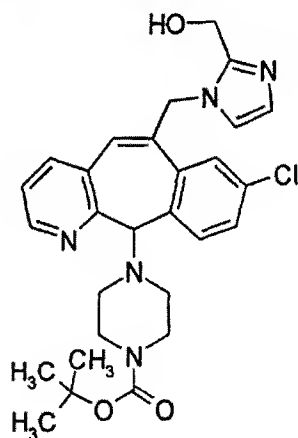

10

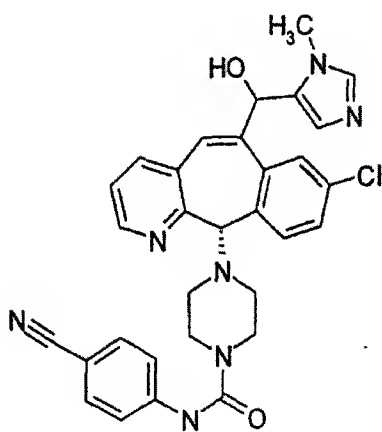

25. The compound according to claim 1 which is:

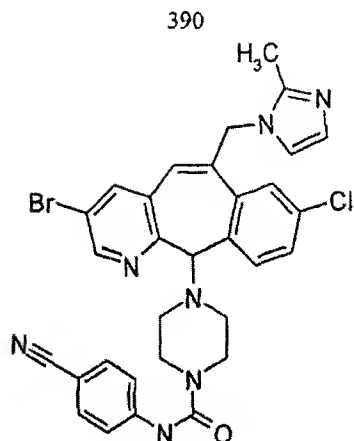

26. The compound according to claim 1 which is:

27. The compound according to claim 1 which is:

28. The compound according to claim 1 which is:

29. A pharmaceutical composition comprising an effective amount of a compound of any of claims 1 to 28 in combination with a pharmaceutically acceptable carrier.

30. A method for inhibiting the abnormal growth of cells comprising administering an effective amount of a compound of any of claims 1 to 28.

31. The method of claim 30 wherein the the cells inhibited are tumor cells expressing an activated ras oncogene.

32. The method of claim 31 wherein the tumor cells inhibited are pancreatic tumor cells, lung tumor cells, myeloid leukemia tumor cells, thyroid follicular tumor cells, myelodysplastic tumor cells, head and neck tumor cells, melanoma tumor cells, breast tumor cells, prostate tumor cells, ovarian tumor cells, bladder tumor cells, glioma cells or colon tumor cells.

33. The method of claim 30 wherein the inhibition of the abnormal growth of cells occurs by the inhibition of ras farnesyl protein transferase.

34. The method of claim 30 wherein the inhibition is of tumor cells wherein the Ras protein is activated as a result of oncogenic mutation in genes other than the Ras gene.

3/5. A method of treating proliferative diseases in a patient in need of such treatment, said treatment comprising administering concurrently or sequentially, an effective amount of a compound of any of claims 1 to 28 in combination with an effective amount of at least one chemotherapeutic agent and/or radiation.

5

36. The method of claim 35 wherein said proliferative disease is selected from lung cancer, pancreatic cancer, colon cancer, myeloid leukemia, melanoma, thyroid follicular cancer, head and neck cancer, ovarian cancer, bladder carcinoma, glioma, myelodysplastic syndrome, breast cancer and prostate cancer.

10

37. The method of claim 36 wherein said proliferative disease is selected from lung cancer, head and neck cancer, bladder cancer, breast cancer, prostate cancer and myeloid leukemia.

15

38. The method of any of claims 35 to 37 wherein said chemotherapeutic agent is an antineoplastic agent selected from: Uracil mustard, Chlormethine, Cyclophosphamide, Ifosfamide, Melphalan, Chlorambucil, Pipobroman, Triethylenemelamine, Triethylenethiophosphoramine, Busulfan, Carmustine, Lomustine, Streptozocin, Dacarbazine, Temozolomide, Methotrexate, 5-Fluorouracil, Floxuridine, Cytarabine, 6-Mercaptopurine, 6-Thioguanine, Fludarabine phosphate, Pentostatine, Gemcitabine, Vinblastine, Vincristine, Vindesine, Bleomycin, Dactinomycin, Daunorubicin, Doxorubicin, Epirubicin, Idarubicin, Paclitaxel (Taxol), Mithramycin, Deoxycoformycin, Mitomycin-C, L-Asparaginase, Interferons, Etoposide, Teniposide, 17 $\alpha$ -Ethinylestradiol, Diethylstilbestrol, Testosterone, Prednisone, Fluoxymesterone, Dromostanolone propionate, Testolactone, Megestrolacetate, Tamoxifen, Methylprednisolone, Methyltestosterone, Prednisolone, Triamcinolone, Chlorotrianisene, Hydroxyprogesterone, Aminoglutethimide, Estramustine, Medroxyprogesteroneacetate, Leuprolide, Flutamide, Toremifene, goserelin, Cisplatin, Carboplatin, Hydroxyurea, Amsacrine, Procarbazine, Mitotane, Mitoxantrone, Levamisole, Navelbine, CPT-11, Anastrozole, Letrozole, Capecitabine, Reloxafine, Droloxafine, and Hexamethylmelamine.

20

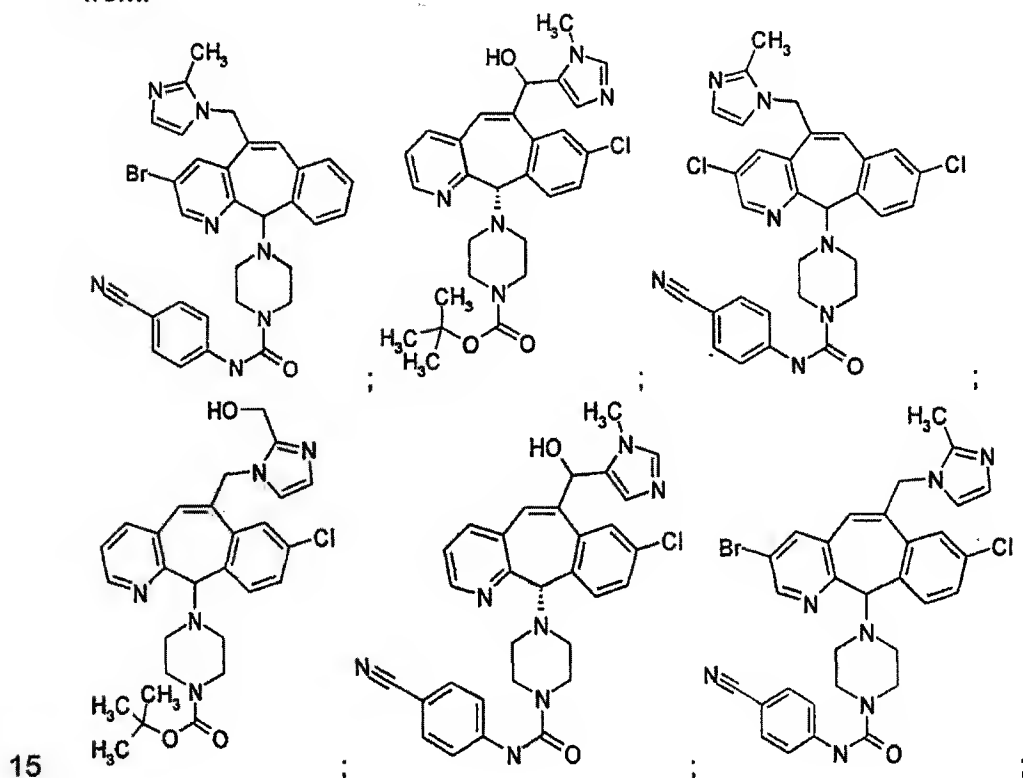

25

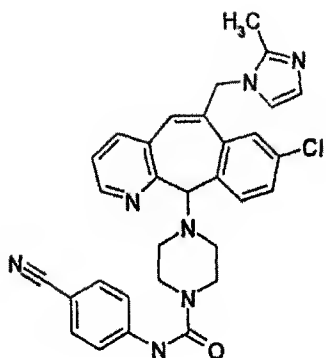

30

39. The method of any of claims 35 to 37 wherein said chemotherapeutic agent is a microtubule affecting agent selected from allocolchicine, Halichondrin B, colchicine, colchicine derivatives, dolastatin 10, maytansine, rhizoxin, paclitaxel, paclitaxel derivatives, thiocolchicine, trityl cysteine, vinblastine sulfate, vincristine sulfate, epothilone A, epothilone, discodermolide estramustine, nocodazole and MAP4.

40. The method of any of claims 35 to 37 wherein said chemotherapeutic agent is selected from Gemcitabine, Cisplatin, Carboplatin, Taxotere, Paclitaxel, and Paclitaxel derivatives.

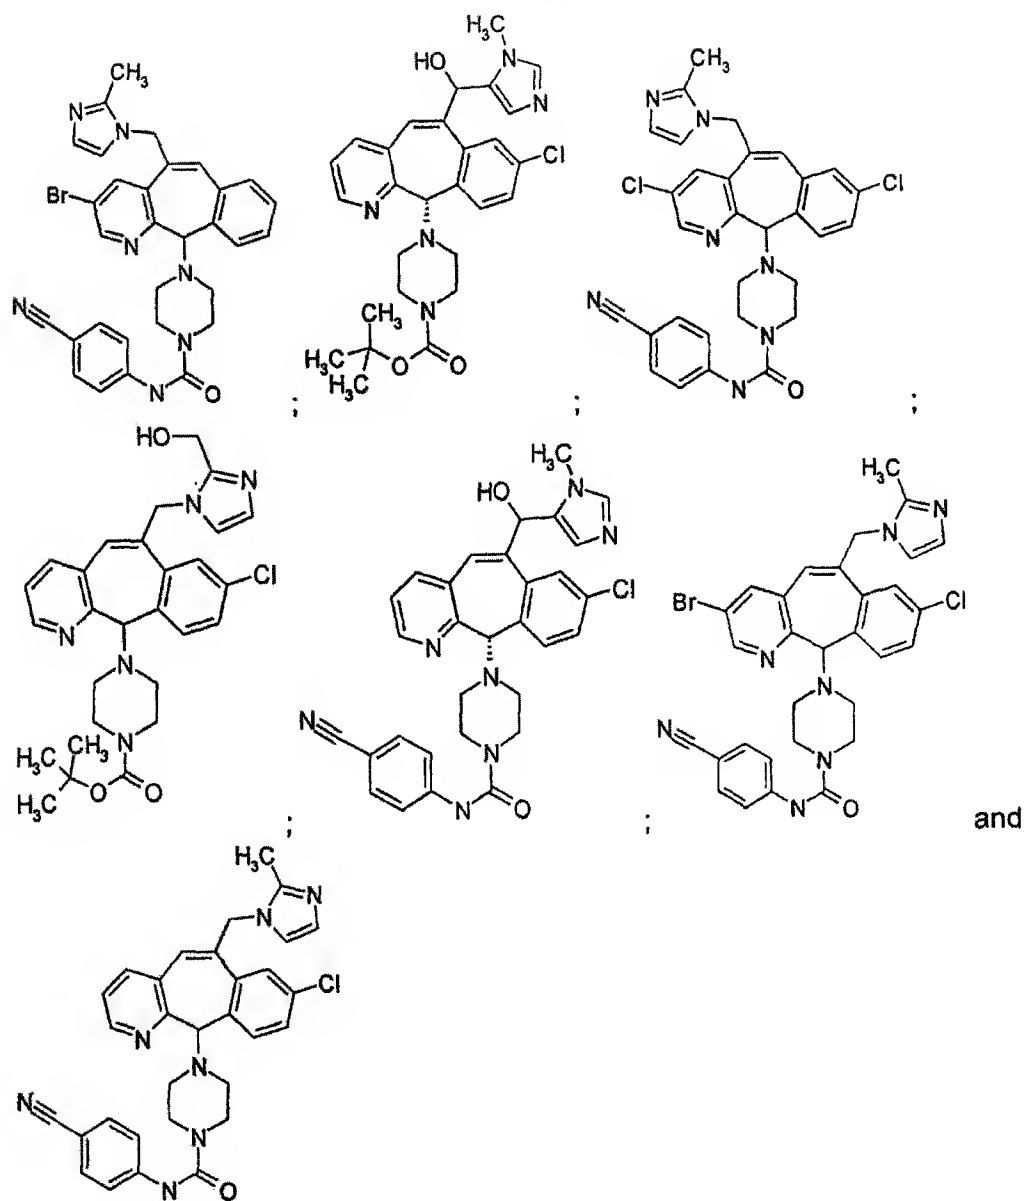

41. The method of claim 35 wherein the compound of claim 1 is selected from:

42. The method of claim 35 wherein the proliferative disease treated is selected from lung cancer, pancreatic cancer, prostate cancer and myeloid leukemia;
- 5 the chemotherapeutic agent is an antineoplastic agent selected from: Uracil mustard, Chlormethine, Cyclo-phosphamide, Ifosfamide, Melphalan, Chlorambucil, Pipobroman, Triethylenemelamine, Triethylenethiophosphoramine, Busulfan, Carmustine, Lomustine, Streptozocin, Dacarbazine, Temozolomide, Methotrexate, 5-Fluorouracil, Floxuridine, Cytarabine, 6-Mercaptopurine, 6-Thioguanine, Fludarabine
- 10 phosphate, Pentostatine, Gemcitabine, Vinblastine, Vincristine, Vindesine, Bleomycin Dactinomycin, Daunorubicin, Doxorubicin, Epirubicin, Idarubicin, Paclitaxel (Taxol), Mithramycin, Deoxycoformycin, Mitomycin-C, L-Asparaginase, Interferons, Etoposide, Teniposide 17 $\alpha$ -Ethinylestradiol, Diethylstilbestrol, Testosterone, Prednisone, Fluoxymesterone, Dromostanolone propionate, Testolactone, Megestrolacetate,
- 15 Tamoxifen, Methylprednisolone, Methyltestosterone, Prednisolone, Triamcinolone, Chlorotrianisene, Hydroxyprogesterone, Aminoglutethimide, Estramustine, Medroxyprogesteroneacetate, Leuprolide, Flutamide, Toremifene, goserelin, Cisplatin Carboplatin, Hydroxyurea, Amsacrine, Procarbazine, Mitotane, Mitoxantrone, Levamisole, Navelbene, CPT-11, Anastrozole, Letrazole, Capecitabine, Reloxafine,
- 20 Droloxafine, and Hexamethylmelamine and/or a microtubule affecting agent selected from: allicolchicine, Halichondrin B, colchicine, colchicine derivatives, dolastatin 10, maytansine, rhizoxin, paclitaxel, paclitaxel derivatives, thiocolchicine, trityl cysteine, vinblastine sulfate, vincristine sulfate, epothilone A, epothilone, discodermolide estramustine, nocodazole and MAP4 and the compound of claim 1 is selected from:.

394

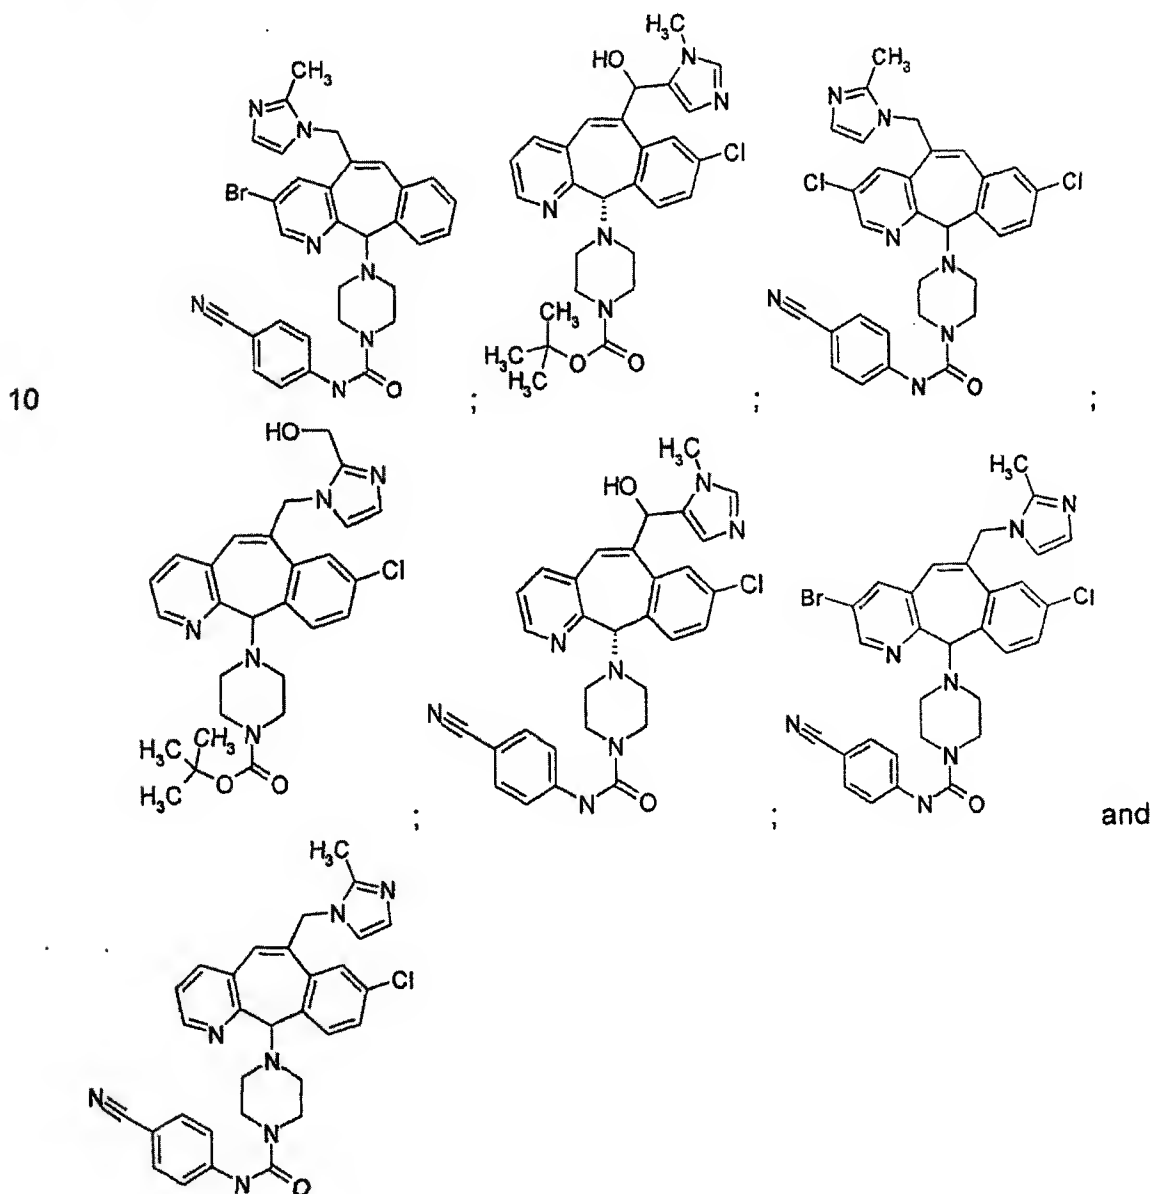

5            43.    The method of claim 42 wherein the microtubule affecting agent is Paclitaxel, a paclitaxel derivative or Taxotere.

            44.    The method of claim 42 wherein the antineoplastic agent is selected from Cyclophosphamide, 5-Fluorouracil, Temozolomide, Vincristine, Cisplatin,  
 10    Carboplatin and Gemcitabine.

45. The method of claim 42 wherein the antineoplastic agent is selected from Cisplatin, Carboplatin and Gemcitabine.

46. The method of claim 42 wherein the proliferative disease treated is selected from lung cancer, head and neck cancer, bladder cancer, breast cancer, prostate cancer and myeloid leukemia; the chemotherapeutic agent is an antineoplastic agent selected from Cisplatin, Carboplatin and Gemcitabine and/or a microtubule affecting agent selected from Taxol and Taxotere and the compound of claim 1 is selected from:

47. The method of claim 42 wherein the proliferative disease treated is lung cancer; and the chemotherapeutic agent is selected from Gemcitabine, and Cisplatin.

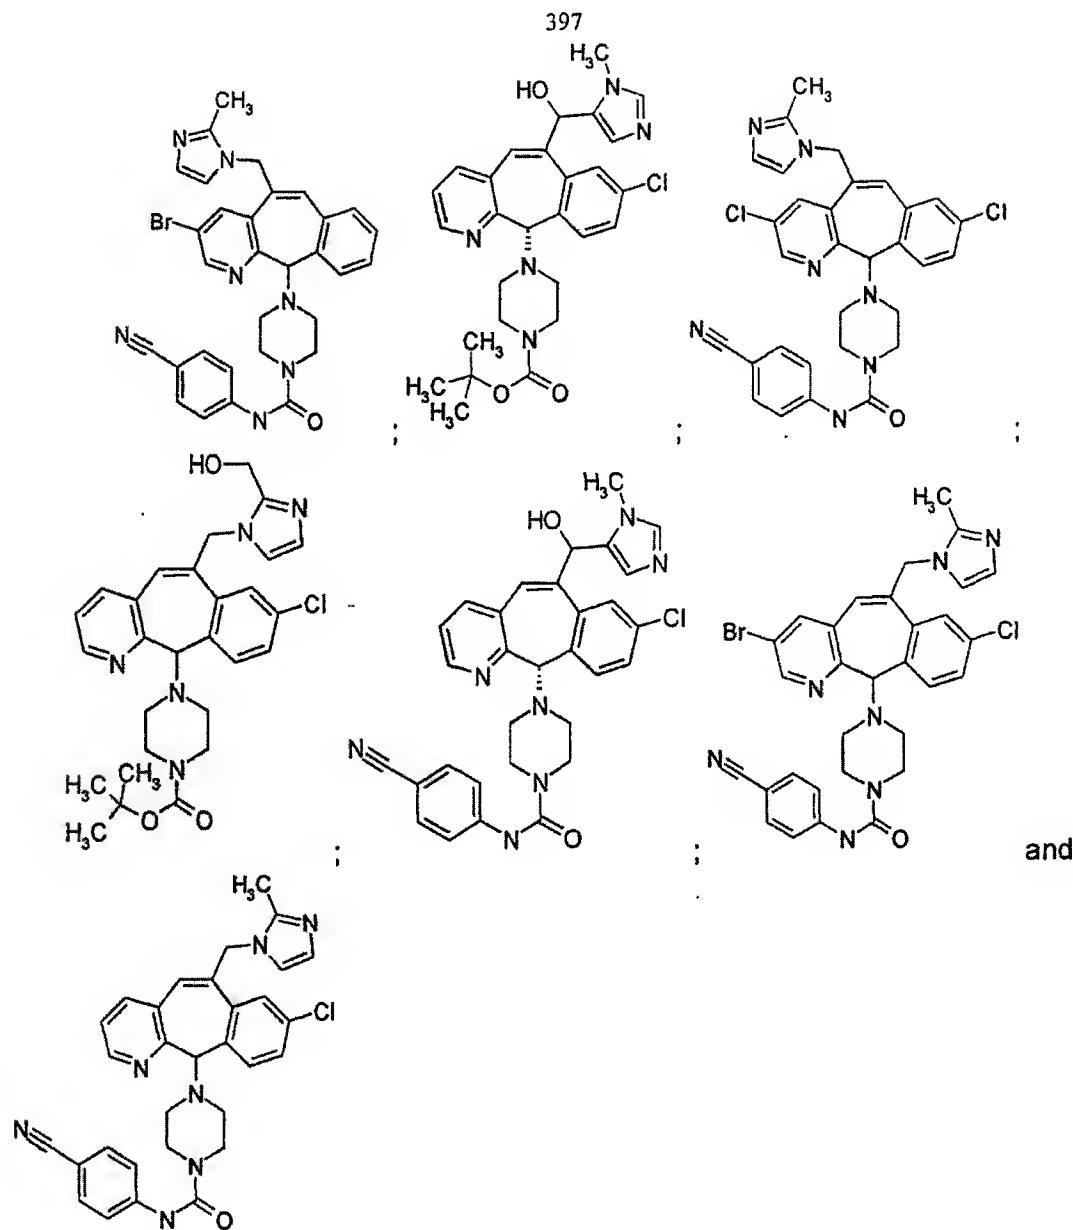

48. A method of treating proliferative disease in a patient in need of such treatment, said treatment comprising administering concurrently or sequentially, and effective amount of a compound of claim 1 in combination with an effective amount of at least one signal transduction inhibitor.

49. The method of claim 48 wherein the proliferative disease treated is selected from lung cancer, pancreatic cancer, colon cancer, myeloid leukemia, melanoma, thyroid follicular cancer, head and neck cancer, ovarian cancer, bladder carcinoma, glioma, myelodysplastic syndrome, breast cancer and prostate cancer.

50. The method of claim 49 wherein the signal transduction inhibitor is selected from a bcr/abl kinase inhibitor, epidermal growth factor receptor inhibitor and her-2/neu receptor inhibitor.

51. The method of 49 wherein the signal transduction inhibitor is selected from the bcr/abl kinase inhibitor Gleevec, the epidermal growth factor receptor inhibitors, iressa, OSI-774, Imclone C225 and Abgenix ABX-EGF and the her-2/neu receptor inhibitor Herceptin.

52. The method of 49 wherein the proliferative disease treated is selected from lung cancer, head and neck cancer, bladder cancer, breast cancer, prostate cancer and myeloid leukemia; the signal transduction inhibitor is selected from Gleevec, iressa, OSI-774, Imclone C225, Abgenix ABX-EGF and Herceptin and the compound of claim 1 is selected from:

5 53. The use of a compound of any of claims 1 to 28 for the manufacture of a medicament and the use of at least one chemotherapeutic agent for the manufacture of a medicament wherein said medicaments are used in combination for the treatment of a proliferative disease.

10            54.     The use of claim 53 wherein the chemotherapeutic agent is an  
antineoplastic agent selected from Uracil mustard, Chlormethine, Cyclo-phosphamide  
Ifosfamide, Melphalan, Chlorambucil, Pipobroman, Triethylenemelamine,

Triethylenethiophosphoramine, Busulfan, Carmustine, Lomustine, Streptozocin, Dacarbazine, Temozolomide, Methotrexate, 5-Fluorouracil, Floxuridine, Cytarabine, 6-Mercaptopurine, 6-Thioguanine, Fludarabine phosphate, Pentostatine, Gemcitabine, Vinblastine, Vincristine, Vindesine, Bleomycin, Dactinomycin, Daunorubicin, 5 Doxorubicin, Epirubicin, Idarubicin, Paclitaxel (Taxol), Mithramycin, Deoxycoformycin, Mitomycin-C, L-Asparaginase, Interferons, Etoposide, Teniposide 17 $\alpha$ -Ethinylestradiol, Diethylstilbestrol, Testosterone, Prednisone, Fluoxymesterone, Dromostanolone propionate, Testolactone, Megestrolacetate, Tamoxifen, Methylprednisolone, Methyltestosterone, Prednisolone, Triamcinolone, 10 Chlorotrianisene, Hydroxyprogesterone, Aminoglutethimide, Estramustine, Medroxyprogesteroneacetate, Leuprolide, Flutamide, Toremifene, goserelin, Cisplatin, Carboplatin, Hydroxyurea, Amsacrine, Procarbazine, Mitotane, Mitoxantrone, Levamisole, Navelbene, CPT-11, Anastrozole, Letrazole, Capecitabine, Reloxafine, Droloxafine, and Hexamethylmelamine.

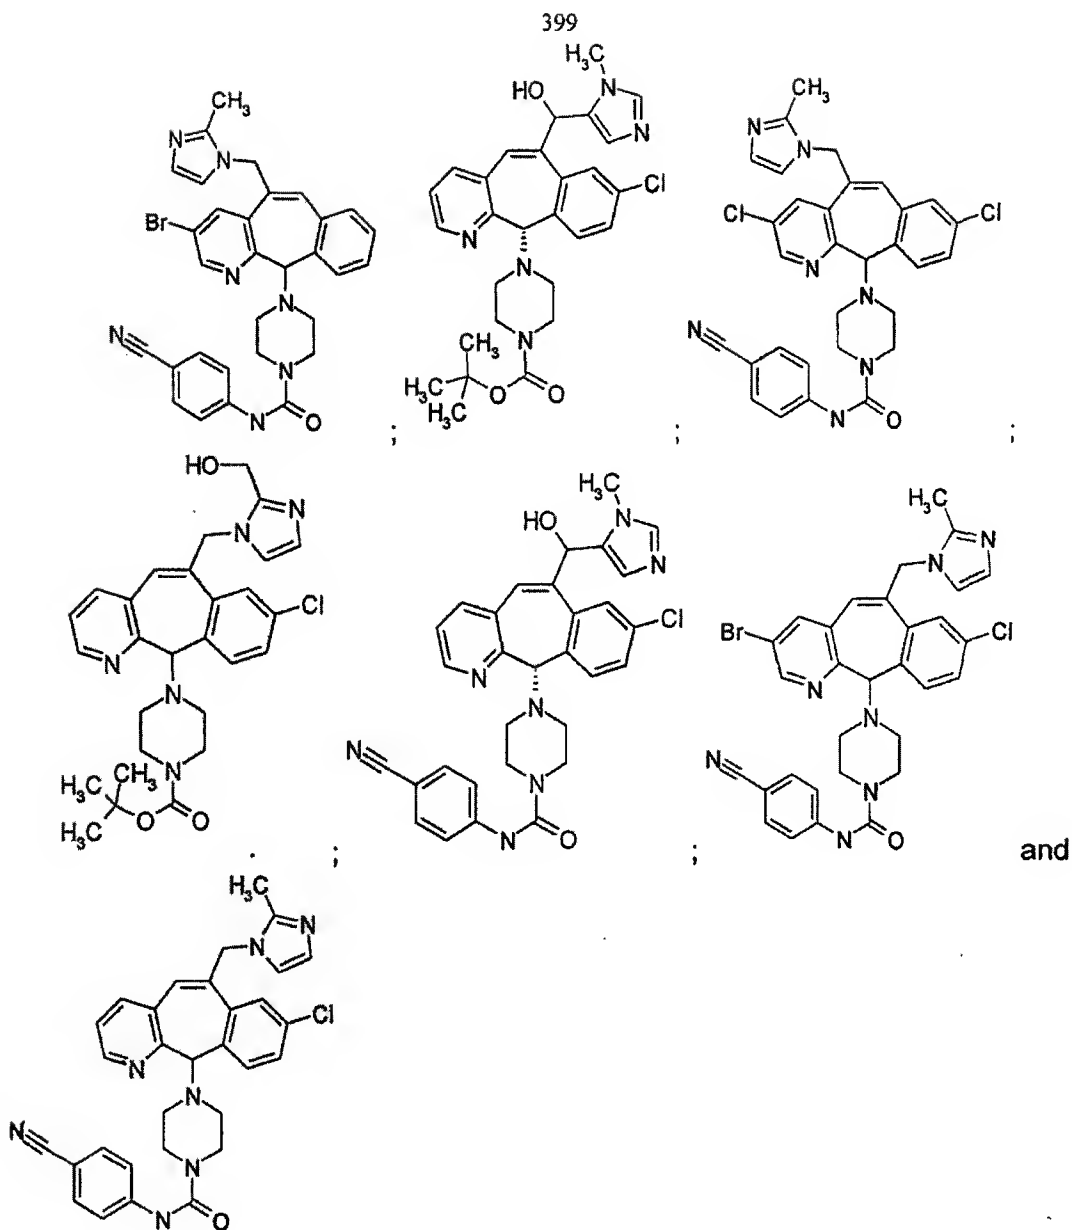

15

55. The use of claim 53 wherein said chemotherapeutic agent is a microtubule affecting agent selected from allocolchicine, Halichondrin B, colchicine, colchicine derivatives, dolastatin 10, maytansine, rhizoxin, paclitaxel, paclitaxel derivatives, thiocolchicine, trityl cysteine, vinblastine sulfate, vincristine sulfate, 20 epothilone A, epothilone, discodermolide estramustine, nocodazole and MAP4.

56. The use of a compound of any of claims 1 to 28 for the manufacture of a medicament and the use of at least one signal transduction inhibitor for the manufacture of a medicament wherein said medicaments are used in combination for 25 the treatment of a proliferative disease.

57. The use of claim 56 wherein said signal transduction inhibitor is selected from the bcr/abl inhibitor Gleevec, the epidermal growth factor receptor inhibitors, Iressa, OSI-774, Imclone C225 and Abgenix ABX-EGF and the her-2/neu receptor 30 inhibitor Herceptin.

58. The use of claims 53 to 57 wherein the compound of claim 1 is selected from:

- 5      59.    The use of claims 53 to 58 wherein the proliferative disease treated is selected from lung cancer, head and neck cancer, bladder cancer, breast cancer, prostate cancer and myeloid leukemia.

## INTERNATIONAL SEARCH REPORT

International Application No

PCT/US 01/26792

## A. CLASSIFICATION OF SUBJECT MATTER

IPC 7 C07D401/06 C07D401/04 C07D401/14 C07D221/16 A61K31/435  
A61P35/00

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, CHEM ABS Data

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	US 6 071 907 A (LIU YI-TSUNG ET AL) 6 June 2000 (2000-06-06) claims; example 3 ---	1,29-59
X	US 5 089 496 A (GANGULY ASHIT K ET AL) 18 February 1992 (1992-02-18) claims 1,37,44,46; examples ---	1,29
A	US 5 925 648 A (GIRIJAVALLABHAN VIYYOOR M ET AL) 20 July 1999 (1999-07-20) the whole document ---	1,29-59

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

## \* Special categories of cited documents:

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*&\* document member of the same patent family
